PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

AND GEAR COMBINED.

A Philipson offered FREE

There are many clever experts in the Motoring World, but it is questionable if ONE can give an accurate description of WHY and HOW the PHILIPSON PULLEY works, and how it has been so successful.

WE OFFER ONE OF OUR LATEST PULLEYS FREE for the best answer given, and the result will be published in "The Motor Cycle" dated October 20th.

Answers must be received on or before TUESDAY, OCT. 4.

We cannot entertain any correspondence in connection with this competition, and our decision as regards the best answer is final, and the acceptance of this rule is an expressed condition of entry.

The Lightest, Speediest, and Simplest Gear on the market for direct belt-driven 2-stroke and 4-stroke engines.

IMMEDIATE DELIVERY.

Send for Illustrated Booklet.

No gear box friction.

No grinding noises.

No wheels or pinions

to chew up.

What is your make? Write us.

REDUCED PRICE £7 7 0 Carriage Paid.

Uninteresting Speed Trials.

CONSIDERABLE difference of opinion appears to exist as to what constitutes an interesting and successful speed event. It would appear that some clubs measure the success of their big race meetings by the number of hours necessary to run them off, and by the number of times the competitors cross the starting and finishing lines; the longer the time and the greater number of "entries," the greater the success. This is all very well from the club treasurer's viewpoint; but what justification is there for it otherwise?

Do even those spectators to whom speed trials are an entire novelty retain their interest after four or five hours of witnessing the same thirty or forty riders again and again flashing past, one at a time, along a straight and level stretch of road—even if the speeds reached 80 or 90 m.p.h.?

Since spacious, natural speed-ways, such as Pendine sands, unfortunately, are not dotted all over the country, the majority of clubs cannot increase interest by holding their speed events as scratch races instead of timed trials, some other means, therefore, must be found if these competitions are to retain their popularity. Which, in effect, means that the existing type of meeting must be made less uninteresting.

There should not be more than ten distinct classes on the programme; "members" and "open" entries should run together; two-strokes and four-strokes should not be separated; either a flying or standing start should be decided upon, not both; and if, as often happens, the 750 c.c. class receives no "750 c.c. entries," that class should be omitted instead of giving the 500 c.c. machines an extra run.

Each man's time should immediately be posted at both ends of the course. Too often, at present, results are announced neither promptly, completely, nor accurately.

Variety may be gained by borrowing the Midland Centre's idea of a relay race, and perhaps a handi-

cap event; if the earlier advice regarding limitation of the classes is carried out, there should be plenty of time.

Practically all the foregoing applies equally to the so-called hill-climb.

The Anglo-Dutch Trial.

THE Fourth International Team Trial between Holland and Great Britain is now an event of the past. This year held in England, the event has afforded motor cyclists of this country an opportunity to return to a party of Dutch riders the hospitality extended to the British team in the 1920 trial in Holland. Nothing but good can accrue from such events; would that there were more of them. Not only are friendships made between individuals, but such fraternising helps to cement the friendship of nations. The motor cycles ridden by the British team were exclusively of English manufacture, but the mounts of the visitors represented the productions of Holland, America, Italy, and Great Britain. Thus the trial was of a character in keeping with the spirit that brought the series into being: it was a competition between the chosen riders—and not machines—of two nations which appreciate motor cycling as a sport, as distinct from a pastime and its utilitarian advantages.

In arranging the trial in this country, the organisers displayed the characteristic spirit of British sportsmanship. There are no really severe hills in Holland, and to have included some of even the less difficult test-hills would have considerably enhanced the chances of the home team. To all competitors the route was a secret one, and in every way the conditions were such that the visiting team was at no time under a disadvantage through being in a strange country.

We feel sure that our guests have returned to Holland agreeing that England is a country well worth the visiting, and that British motor cyclists are ready always to extend to them a hearty welcome.

OCCASIONAL COMMENTS

by 'IXION'

KIRKMICHAEL I.O.M.

Official!

A CORRESPONDENT informs me that the cyclists who object to the term "push-bike" ought to memorialise the Government instead of bullying me. He says that in Air Ministry and War Office orders such a phrase as "Cycles, Push, Supply of," is by no means unknown. Perhaps I may now be left in peace.

Ugh!

MY enthusiasm for portable hotels, otherwise touring with a tent, is swiftly waning. The storm which broke on Sunday evening, September 11th, caught this poor scribe on rather an exposed bit of ground, where the soil, having been ploughed in 1920, was still rather soft. Readers who are cinema fiends and go to see such serials as "The Hooded Death," or words to that effect, will remember the film hero's expression when the Black Hand collared him unarmed for the "umpteenth" time, and attach him by the ankles and wrists to two express trains moving in opposite directions at high revs. Similarly, convulsed were my lineaments about 4 a.m. on that awful Monday, as the hurricane yowled ferociously round my frail tabernacle. For the future I may prefer something solid, with a bar to it.

Pegs.

NO, No, No! I do not mean what you mean. I am still thinking of my tent. The gentlemen who make tents have still a lot to learn. My tent was designed by a cyclist for cyclists. It folds up into the size of a seafaring man's baccy pouch, and fits into the waistcoat pocket. It is precariously attached to mother earth by a couple of dozen tiny steel skewers about 4in. long. When the storm of September 11th blew itself out, the earth around my tent was perforated by tyre levers, tyre inflators, screwdrivers, cold chisels, brake rods, and other lengths of odd metal ingeniously improvised from the motor bicycle. I recommend readers who take up camping to make their own pegs from something large and strong, such as a second-hand crowbar. A colleague

on *The Autocar* staff makes his from flat strip iron, $\frac{1}{4}$ in. \times $\frac{1}{4}$ in. in 15in. lengths; but then he camps on the foreshore just above high-watermark, where the sand is as friable as the french chalk in a tyre repair outfit. For myself, I am busy with $\frac{1}{4}$ in. round stuff, and a length of 9in. will probably content me.

The Four-wheeler Push.

THIS autumn may see almost as many motor cyclists at the car Olympia as will visit the cycle show; for it is common knowledge that lots of car firms are bringing out four-wheeled cycle cars with engines of motor cycle type. I doubt whether there will be any real immediate competition between cycle cars and sidecars. The price chasm is still fairly wide; to quote famous examples, the 8 h.p. air-cooled Rover carette costs £262 10s., whereas a good twin outfit is listed at no more than £155, and any future price reductions should be proportionate in both lines.

The Force of Example.

MY pal Jones has a machine—we will call it the 8 h.p. Cough-Cough—of which an exact duplicate reposes in my garage. Jones's Cough-Cough has been a bad starter from birth—it has never started from cold since delivery in less than a couple of dozen efforts. My Cough-Cough is a pearl in that respect—dope, give one kick, and it's off. Last week-end Jones arrived on a visit to sample the local golf links. Sooner than wrestle with his Cough-Cough, he used mine exclusively for transport purposes. On Monday evening Jones prepared to depart. Conscience-stricken by the example of the meek behaviour of my machine, Jones's engine started at the first kick. We have sent a sworn affidavit of the circumstances to the Society for Psychical Research.

A Taxation Anomaly.

I HAVE just had brought to my notice one of the most glaring scandals in the taxation laws. An ex-officer, whose damaged legs rendered the use of a motor bicycle practically impossible, bought an A.V. cycle car, which costs £115, weighs about 3 cwt., and is fitted with an 8 h.p. J.A.P. engine. Compare this outfit with a sidecar, and whether you consider its probable effect on the roads, its implications as to its

Occasional Comments.—

owner's income, or any other rational taxation factor, it ought to be rated with the sidecars or below them. But just because it has four wheels the little 'bus is mulcted £9 per annum, which is the same as one or two light sporting cars, listed at £600 or more. Absurd, is it not? The A.C.U., the S.M.M.T., and the Manufacturers' Union ought to get the rates altered. Not only because they are a gross injustice to user and maker, but also because they tend to strangle trade in a type of machine which, for all we know, may some day render the whole nation much more mobile.

Another Prop Stand.

THE deluge has started, and I shall soon be searching in vain for naked bits of tube on my 'bus to which to affix fresh prop stands. The machine absolutely bristles with them, and I can never take another toss, for; whichever way it fell, one of them would support it. The 2 lb. 4 oz. Taylor stand was the first to go on, and proved a great blessing on multi-stop rides. It is not perfect; it weighs too much; it takes two hands—or a toe and a hand—to operate it, but it is far better than the ordinary rear stand. I am now testing a sample which arrived anonymously, with an indecipherable post-mark, and scales no more than 6 ozs., being designed to fit on to a footrest or footboard. Moreover, you just knock it down with your toe, as it is locked up or down by a short coil spring acting on each side of a dead centre like the Rudge rear stand. I fancy everybody will want a prop stand of some kind next year.

A Rapson Tyre on the Road.

ONCE alluded to Mr. Rapson as the Napoleon of the tyre industry, since when his side of our correspondence takes the form of a postcard with the legend "Josephine is calling me." However, one of his customers is more communicative. A Morayshire reader tells me that a small but increasing number of Rapson motor cycle tyres are being turned out, and that he has used a 700 x 80 mm. sample for some time past on the rear wheel of his Rudge. His mileage is not enough to be decisive, but he has had no trouble, although he picked up a large piece of broken bottle, causing a gash 3in. long and over ½in. deep. This terrible wound had no effect on the tyre—in

fact, he rode 500 miles further before a chance occurred to get the gash vulcanised. My correspondent goes so far as to say that, with the 35 lb. pressure Rapson tyre on his Rudge became as comfortable as any spring frame.

You Won't Equal It!

IF you read in the Judges' Report of the A.C.U. Six Days that the 17½ h.p. Potterbus and the 8½ h.p. Hogbus have registered a petrol consumption of 222 m.p.g. and 131 m.p.g. respectively, order duplicates by all means, but don't expect to equal their economies. I don't say you *couldn't* do it. I say you *won't*! Why not? Because you are not the sort of man to coast down every tuppenny ha'penny slope. Because you wouldn't crouch down for miles in the dust astern of a fast sidecar outfit in order to reduce windage. The riders were rather too clever for the A.C.U. pundits, who possibly made a mistake in offering bonus marks for phenomenal economies. Some riders registered astonishing figures, and so deluded the public. It would have been enough to inflict penalties for all engines which failed to reach a rational standard of economy.

Nevertheless—

OF course, several wee snags have naturally cropped up in the first attempt to carry out a consumption test with ninety machines over 4730 miles. It spelt gruelling hard work for the replenishment marshals; bothering delays for all the riders; complications for others, who broke petrol pipes, or suffered from flooding; and there were one or two rumours of dishonesty. The results—as I have hinted above—were partly fallacious. But the test was justified a thousand times over by an incident of the previous week—several riders scrapped a certain carburetter because it was extravagant. *That carburetter will immediately be redesigned:* and so may others, if the A.C.U. keep up the good work.

HILL-CLIMBING IN SOUTH AFRICA.

If a railway crossing were included in the course of a hill-climb in Britain the committee would never "hear the end of it," but members of the Cape Province M.C.C. are evidently no respectors of their machines, for the crossing depicted, showing the competitors in flight, was included in a recent hill-climbing event on Sir Lowry Pass. The rider on the left actually "jumped" thirty feet, and the sidecar, too, has all three wheels off the ground.

A SINGLE TRACK SPRING FRAME RUNABOUT.

Comments on the Autoglider as a Hack Machine.

An Open Frame Miniature with the Power Unit in front.

IF a Thames punt were offered to a North Canadian trapper there is no doubt that he would laugh it to scorn, yet a punt has certain advantages over the birch-bark canoe, just as the latter for certain purposes is superior to the punt.

One could go on indefinitely with such examples of special means for special needs, but the one given above suffices to illustrate the point we wish to emphasise in connection with the Autoglider. It is not exactly a motor cycle, yet it belongs to that category; it is not a scooter, although by most people it is regarded as such. It is in one of the sub-divisions, just as the canoe and the punt come into the general category of boats, and, like either of the types of watercraft, it has a place in the world of transportation.

"One Man's Meat—"

For a considerable period during the summer we had one of these machines in use, and at the outset we made a mistake which approximated to offering a punt to a Canadian woodsman—we offered it to a sporting member of the staff, whose ideals cause him to eschew such refinements as spring frames and small two-stroke engines. He laughed at it.

Our next offer was to a very tall, very dignified, and very sensitive member of the staff, who continually complains that all motor cycles are built for dwarfs. It was refused with indignation after a private trial in view of a grinning office boy, who, incidentally, half expected that it would be handed to him. (We more than suspect that he had completely mastered its control during a luncheon hour.)

Now it happened that one short-limbed member of the staff had two peculiarities; one was a *penchant* for perfectly-creased trousers, and the other a long-abiding love for a motor cycle with a very dirty engine. He was thus prevented from riding to the office unless in motor cycling attire. He did not wait to be asked if he would use the Autoglider. He put in his claim simultaneously with that of the Editor's lady private secretary, who fell in love with the polished mahogany bodywork at sight.

During the Autoglider's stay in Coventry it was used by every member of the staff and by others. Some rode it once, others perhaps twice—when they were in a hurry and their own machine was not available—and quite a number used it because they really liked it. It was borrowed for week-ends by riders of both sexes; it was used on shopping excursions, it went on a short tour, and one early morning it was the victor in a private match between an Autoglider enthusiast and the owner of another machine of a similar type.

As a Utility Mount.

To summarise the opinions of many riders, we have had to eliminate the views of those who regard the motor cycle purely as an accessory to sport. The Autoglider was designed to meet specific requirements,

and these needs are fulfilled.

It is extremely easy to ride; one pushes off, drops the compression release lever, and the engine fires. Then the clutch lever is raised, and the machine comes to a standstill while the rider makes himself or herself (usually the latter) comfortable.

The Autoglider's name has not been derived from the

The 2½ h.p. Autoglider. This attractive little machine is fitted with a spring frame and clutch.

The Autoglider will rest against the kerb, and it is rarely necessary to use the stand. When required, however, this is rendered easy by the strap handle at the back of the seat.

The locker beneath the seat is a much appreciated item in its specification.

As a runabout for the business man or woman the Autoglider fulfils all requirements.

push about as a motor cycle; but this is a motor cyclist's view. In contradiction to this we ought to mention that a lady who made the same complaint regarding a lightweight motor bicycle found no difficulty in handling the Autoglider, but found a disadvantage in the fact that it could not be wheeled directly over the kerb. This is due to the small wheels and the weight of the engine at the front.

The box under the seat is a very useful item; especially does this appeal when shopping. In this receptacle the tool roll, a spare tube, and repair outfit are always at hand without having to undo a number of straps. A spare can of oil can also be carried—an advantage when it is remembered that on filling up at a garage one cannot always buy a gill of oil to mix with the petrol. There is still room for small parcels.

The price with clutch is £65, while several other models are marketed from £40. The manufacturers are Autoglider, Ltd., Birmingham.

manner in which the machine glides off on the clutch; the full meaning of its name comes home to the rider when once under way. In the world of wheels there is nothing that gives quite the same sensation as the Autoglider. Its spring frame functions perfectly, while, on a really bad road, a second unique sensation is experienced, and may be likened to a canter on a well-trained horse. At no time does one feel road shocks, and as for the speed—well, if it were not so easy to control, one would almost say it was too fast.

There is no doubt that this seat-type Autoglider is a great improvement on the seatless type. The seat considerably extends its range of action. We once covered forty miles at over 20 m.p.h. on a stand-up model, and found it somewhat fatiguing—in fact, it was only the excellent springing that made the achievement possible at all.

We hesitate before criticising one point which seemed a disadvantage. It did not prove so easy to

BROKEN VALVES.

IF you read the account of any big trial held this season, you will see that one or more riders broke exhaust valves. In fact, there was a petty epidemic of broken valves in the speed test which concluded the Six Days Trial at Brooklands, even though some of the competitors had fitted new valves for the occasion. A superficial observer would imagine that no unbreakable valves exist. This is a complete blunder. There are firms who will supply any engine builder with valves which they guarantee to be unbreakable; nor are those valves necessarily so hard that they hammer a soft cast iron seating out of shape. One such firm standardised during 1920 three

materials for making valves for motor cycle engines. I may give an idea of the respective prices by mentioning three figures—1s. 3d., 1s. 9d., and 6s. The 1s. 3d. valve was not recommended. The 1s. 9d. valve was good enough for any ordinary side valve engine without being pluperfect. The 6s. valve was advisable in designs where a broken valve might cause consequential damage, e.g., to the piston. The firm had many customers. Only one of its clients bought the 6s. valve. Most concerns thought 1s. 3d. quite enough to pay. I have not broken a valve for donkey's years; but I am very careful about the make of machine I ride.

IXION.

TOOL KITS.

Some Remarks on the Minor Equipment of Present-day Machines.

BY a process of evolution, the modern motor cycle has become a wonderfully perfect piece of mechanism. Faults in engines, transmission, frames, etc., have gradually been eliminated until, in spite of the fact that there are many opportunities for improvement, the motor cycle as a whole is a most reliable and satisfactory means of conveyance.

Now the motor cyclist is usually an enthusiast, and likes to perform his own repairs and adjustments; incidentally, if he is mechanically inclined, he will save much time and money. But how often has the reader desired to carry out an elementary adjustment, and found no tools suitable for the purpose?

It is becoming a practice to supply a set of box spanners, a large adjustable spanner, a pair of pliers, and a perfectly useless screwdriver, neatly rolled up in a canvas cover, and with these implements the unsuspecting are content *until trouble arises*. Those

who have tried to adjust a hub bearing or a Bowden cable adjuster with such a kit knew that both can be done, but the process is not good for temper or plating.

It is sad, but true, that the commonest adjustments are those least often provided for. To the two instances above should be added the need for

Even a small adjustable spanner is too wide in the jaws for small adjustments.

spanners to enable the rider to adjust his tappets and to tighten an oil or petrol union; these tools, particularly the last mentioned, are frequent absentees.

There are Exceptions.

All manufacturers are not to be tarred with the same brush—some few supply excellent kits, but very few supply *all* the necessary tools. For instance, the last machine owned by the writer was turned out with a world-renowned name, and nothing else to assist one in adjusting the tension of the clutch control, an operation which became necessary twice in six months. Of course one can often "manage" with a good adjustable spanner, but this is bad for nuts and too wide in the jaws for general use on motor cycles. I have an old and ever present friend in a "Lucas Girder" with jaws ground down, which has been a constant companion and help for seven years past.

The ideal motor cycle should require only a modest kit, since four nut sizes, exclusive of valve cap and head spanners, are all that are required, but in the case of machines assembled from proprietary units a very complete and rather bulky kit is necessary.

No machine should be sent out from the makers without a spanner to fit every nut, a first-class medium-sized adjustable spanner, a screwdriver with a correctly ground point, a chain rivet extractor or belt punch, or both, and tyre levers.

With regard to the normal kit: unless split pins are used, and they are not common on motor cycles, pliers are unnecessary—and even injurious—since the average rider employs them only for removing nuts, holding bolts by the threads, and other most improper purposes for which special spanners should be supplied. The general run of cheap and nasty screwdrivers as supplied appear to be designed for any purpose rather than driving screws, since they are either too thick to go into the screw slots or else ground at such sharp angles that they immediately force themselves out of the slot when a turning movement is applied. Good box spanners are excellent *when there is room to use them*, and ring spanners are even better, though the same qualifications apply. Provided that the necessary set spanners are supplied, there is no necessity for a large adjustable spanner which will only be used as a hammer (for which purpose the correct tool is both lighter and more effective).

Complete with Oil Tin.

Next, a word about oil guns. An extraordinary number of motor cycles are turned out with a cycle oilcan in the tool roll. This is the most wonderful case of optimism of the whole bunch. The life of such an accessory in the average pannier bag is short and noisy, though probably anything but merry; and what is it there for, anyway? If the engine needs injection suitable tank fittings should be included, and no device ever constructed could be less suitable for lubricating motor cycle parts than a narrow-necked tin can.

Being a pressman who is accustomed to riding all sorts and conditions of motor cycles, equipped or otherwise, according to manufacturers' specification, I possessed (at one time) a private kit as follows: A set of Terry flat spanners (admittedly a little narrow in the jaw for big nuts, but strong, well-made, and close-fitting), a real screwdriver (home-ground), the Lucas adjustable spanner already mentioned, a tiny King Dick, a pair of parallel jaw pliers, and a Lucas oil gun. Unfortunately, this kit has been thinned down by the ravages of time and unscrupulous motor cycling friends, but parts of it accompany me on all long-distance runs, and I am seldom bothered with badly fitting or missing equipment.

There are so many possible ways of carrying tools that it would take too long to describe them in detail, but it must be obvious that the nearer they are carried to the centre of the machine the less they will be subjected to jolts and jars.

A screwdriver to be serviceable should have a gently tapering blade. The short steep angle of the usual tool-kit instrument is most undesirable.

UBIQUE.

A NEW BRITISH BIG TWIN.

The Sporting Duzmo, with Overhead Valves.

Detachable Heads.

Detachable heads, held down by long bolts, and machined all over internally, are employed; and the arrangement of the overhead valves is such that there is a total absence of pocketing, the rocker gear being supported from lugs cast integrally with the head. In the case of the forward cylinder, the exhaust pipe curves neatly round, and terminates in a drilled fish-tail extending well beyond the rear spindle on the rear side, while the rear exhaust pipe is brought straightaway to the off side of the machine. Lubrication is by means of a Best and Lloyd mechanical pump, and, in addition, an auxiliary hand pump is fitted. There is a separate oil lead to the back of the front cylinder.

A separate camshaft is utilised to operate the valves of each cylinder, and the whole of the exhaust lifting gear is enclosed within the timing cover. An interesting innovation in this respect is an arrangement by which the front exhaust valve is raised before the rear

The exhaust lifter mechanism, which is entirely enclosed.

A new sporting model Duzmo, fitted with an 8 h.p. o.h.v. twin engine and Sturmev-Archer three-speed gear.

valve, so that the risk of oiling up the rear plug is lessened. Articulated connecting rods are used—a feature which is unconventional as far as motor cycle engines are concerned, although common practice in aircraft.

The rear connecting rod has a large roller bearing big-end, and close above the bearing is a lug and pin to which the forward connecting rod is attached. Floating both in piston bosses and small ends, the gudgeon pins are located by spring split rings, the pistons themselves being of aluminium, and of more or less conventional design.

Precautions against Valve Breakage.

We were informed that no trouble has been experienced with broken valves falling into the cylinder and causing damage to the piston and cylinder head. In this connection the valve gear is so arranged that, unless the fracture occurs close up to the head, the valve cannot drop into the cylinder. Stainless steel is used in the valve construction, and is giving every satisfaction. The finish of the engine is excellent, and the appearance most attractive.

Transmission is by chain throughout, a Sturmev-Archer three-speed gear providing the necessary change of ratios. Rear braking is carried out by means of a shoe operating on a dummy belt rim, and a Webb internal brake is incorporated in the front wheel. Wide petrol tank, straight handle-bars, and narrow mudguards provide a very sporting appear-

ance to the machine; though, in the case of the touring model, ample mudguards are provided, and it has an expansion chamber of generous dimensions.

Brampton forks and a Brooks racing saddle are fitted, and in conjunction with conveniently placed footrests, the riding position and general controllability are distinctly good.

Single Lever Carburettor Standard.

Such excellent results have been obtained from the Cox-Atmos single-lever carburettor on test that this device will be standardised.

Whether the new Duzmo will succeed in attaining a 100 m.p.h. gait on the track or not, its performance in competitions will be watched with interest.

Mr. J. Wallace, the designer, is confident that the new model will cater for a market which undoubtedly exists, and his confidence should be justified. The Duzmo is being manufactured at Cedar Road, Enfield Highway, Middlesex.

Diagram of the articulated connecting rod. A large roller bearing is employed for the rear rod.

THE MOTOR CYCLE CLUB OF FRANCE AND THE INTERNATIONAL TROPHY.

WE read in the official journal of the Motor Cycle Club of France that the club intends to re-establish "the International Trophy, formerly the glory of the M.C.F. in the early days of motor cycling," and will make every effort to regain possession of the trophy in question. In 1906 the trophy was won by Austria, where it is still supposed to be, although it is said to have been lost.

To the best of our knowledge, the matter is one which solely concerns the International Federation of Motor Cycle Clubs. On the occasion of its re-establishment in 1912, an effort was made to regain the trophy. This effort was without success, as it could not be traced. It was further decided at the inaugural meeting on the occasion of the re-establishment of the F.I.C.M., with a

view to developing design in motor cycles, that the international competition should take the form of a reliability trial, and not a race; and the British Cycle and Motor Cycle Manufacturers and Traders Union, Ltd., filled the gap by presenting the magnificent silver trophy won this year by Switzerland. It seems, therefore, that our friends the Motor Cycle Club of France are on the wrong track.

A WEEK-END IN SCOTLAND.

Being Impressions of a Competitor in the Scottish Two Days Trials.

A scene on Burnfoot Hill in the Scottish Two Days Trial. J. Shepherd (8 Chater-Lea sidcar) on a portion where the surface resembled the bed of a mountain stream.

A DISTINCTLY successful trial in every sense. This was the unanimous opinion of those riders who competed in this year's Scottish Two Days, which was described in last week's issue of *The Motor Cycle*.

These few notes are penned, as the impressions of a competitor, immediately after the conclusion of the second day's run; and as Sunday had intervened between the run out and the return journey, memories of the first day's run had time to mature, and in the process Talla Linn has become just a hill and the day itself but a pleasurable run under the auspices of the Edinburgh Motor Club.

On Sunday bright sunshine awoke us in our various quarters, palatial or otherwise, to the scent of the marine breeze.

Stranraer has perhaps fewer attractions than Oban of last year, but most of the competitors visited the curious fish pond at Port Logan. This pond is land locked, though fed by the sea, and is stocked with numerous sea fish, which readily take food from the hand.

The King's Arms Hotel, the headquarters at Stranraer, is one of the best we have encountered in Scottish trials. In the evening, Capt. McRobert (the proprietor) and Miss Ford, both of whom have obtained some notoriety in opera, entertained the competitors to a charming concert; but among the competitors themselves there was an appalling lack of talent, only one of them subscribing to the programme.

On Monday perfect weather conditions again favoured us, and after an enjoyable byroad run Pinmore, the first observed hill, was lightly dismissed by almost everyone. Burnfoot, taken just before lunch, was, however, a very different proposition. It consisted of deep ruts and watercourses running irrespon-

sibly at every conceivable angle, and liberally strewn with boulders of all sizes. Rhodes, whose Scott Sociable had run like a clock throughout, and seemed a certainty for a premier award, made a clean ascent, but at the summit he announced that he had damaged his bevel, and had to retire.

Waterloo—One Mile from the Finish.

The remainder of the trial was by main roads to Edinburgh, interesting and picturesque scenery and splendid surfaces combining to make the run most enjoyable. The last hill, West Mains, is in one of the Edinburgh public parks.

The road is very narrow—a wall on one side, a steep bank on the other. Hundreds of spectators were present to see the show. Most of the solo machines made light work of it; but, since the gradient is 1 in 3.8 for about a hundred yards, the fun began with the passenger vehicles. Many of the sidcars failed utterly, and several golds went west. The star performers were: Grinton (Harley-Davidson sc.), Roger Macrae (Harley-Davidson sc.), Neville Hall (2½ O.K. Junior sc.)—who made a wonderful performance throughout, climbing every hill and being dead on time at every check—Miss D. Pullinger (Galloway light car), Capt. Carden (Carden light car), and two of the Rovers.

The most interesting performance was put up by H. M. Batten, who drove the surviving Scott Sociable. His front wheel refused to remain on the ground, and he bumped the wall. Simultaneously, the rear tyre came off, and the climb was continued on the rim. Harry Fairley experienced exactly the same trouble. Alan Hill, with a clean sheet so far, realised his presentiments; for, at the foot of the hill, one of his connecting

rods broke, and, of course, smashed up his engine. Appalling luck, within a mile of the last check!

CLUB TEAM PRIZE.—Cumberland M.C.C.

OVERSEAS SECTION

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

Where Four Speeds Score. ALTHOUGH only two makes were so fitted (and in one case "unofficially"), the fact that four-speed gears were used at all in the recent A.C.U. Six Days Trials may well be a reliable indication of future tendencies. If this should prove so, none will be more gratified than certain sidecar users overseas.

We have before us a letter from a resident in the Nilgiri District of South India, who at present uses a very well-known British big twin sidecar outfit, having gear ratios of 4.6, 7.4, and 12.6 to 1. In this mountainous area the gradients are severe; there are few stretches of level road more than half a mile in length, and, as a rule, the range of visibility is considerably less, owing to the incessant turns and twists in the tracks along the hill sides. It is impossible, therefore, to drive a heavy sidecar at the speed usual on English roads, for which the gear ratios on our correspondent's sidecar were obviously designed. The result is that he is compelled to use second speed a great deal oftener than should be necessary in the interests of economy and a cool-running engine.

While we recommend lower ratios all round (gained by fitting a smaller engine sprocket) as a palliative for our reader's troubles, we are inclined to agree with him that a four-speed gear box would effect a complete cure. An 8 h.p. sidecar machine ought to pull a 4.6 to 1 gear often enough even in a mountainous district to make its retention worth while, and an additional ratio of, say, 5.34 or 6 to 1 would seem to be approaching the ideal.

Here is an opportunity for the British manufacturer to cater for the demands of quite a large section of overseas motor cyclists. Next year it is possible there may be several proprietary four-speed gear boxes available.

Memo. on Service.

"It does British firms far more harm in the long run to export machines without ensuring that there is an adequate stock of spare parts in the country than if they sent no machines at all"—an extract from the letter of a Shanghai correspondent. These words might well be framed and hung in the office of every British motor cycle manufacturer who wishes to build up an export trade. He would benefit—and so would the overseas motor cyclist.

✻ ✻ ✻

Expanding Club Life Overseas.

IN South Africa there is slackness in the sale of motor cycles (incidentally, even greater in motor cars), and in other overseas markets, yet it is refreshing to note the increasing enthusiasm for competitions and the formation of new motor cycle clubs. The falling off in trade was brought about in the majority of cases by economic causes, of which an unfavourable rate of exchange is usually the chief, but, where club life and activities continue to expand, there need be no fear for the future of the motor cycle.

There are now two prosperous clubs in Cape Town alone; and recent speed trials of the Mashonaland M.C.C. attracted quite an enthusiastic entry.

The colonial clubman (if he will pardon the adjective) is generally an out and out enthusiast, and natural conditions abroad very often cater for the

sporting type of trial. Speed trials on the English style are also gaining in popularity, and consequently there is a growing demand for the "sports model"—a type that England makes better than any other country in the world. At one time overseas demand tended towards the big twin for both solo and sidecar work.

After a long period of inactivity motor cycle trials in Ceylon have been resumed. The illustration depicts the start at Kalulura of the first post-war motor cycle non-stop reliability trial, showing a Harley-Davidson rider being despatched.

A Selection of Letters from Readers scattered all over the World.

Yorkshire or South Africa?

Roads in England and South Africa are compared by "CLOEE," a Port Elizabeth (South Africa) correspondent. He writes:

"When in the Mother Country my home was in Bradford, Yorks., and, as you know, the roads in that part of England, especially in the towns, are nearly all cobbles. During the war those roads began to get extremely 'pot-hole,' the damage being done mostly by big heavy steam and motor lorries, and as there was very little repair work going on, these 'buses' played havoc with the roads. Now, out in this country, the town roads on the whole are 100% better than the Yorkshire town roads, with a few exceptions of course; the little villages up country must not be included.

"The roads are all built up in this town, because what is now town used to be the beach once, so they are composed of chopped stone, well rolled in, and then covered with asphalt, which makes for quite a nice surface. The faults we have to find are when the municipality dig up the roads for drainage, electric cables, etc.; they never level them off properly again, leaving either a little mountain in the road or else a pit.

"Once one gets out of the towns, one never knows what sort of surface one is likely to strike—in fact, they are more like grassgrown tracks. The main roads from big towns to other big towns are a bit better, but as for sand, loose stones, young rocks, and mud, you are lucky if you ever get a stretch a mile long without any of the above appearing in it.

"Of course, the climate out here is infinitely better for the pastime of motor cycling than that at home, especially Yorkshire. As you know, we get very little rain, and although the dust on the roads is sometimes very bad, it is better than the incessant rains and cold at home.

"Motor cycles, on the whole, both English and American, stand up to the conditions very well, and although the latter at one time practically dominated this market, I am glad to say that the former are getting much more popular now, and a lot of lightweights such as the Triumph Junior, Clyno, and O.K. Union are finding their way out here, and, I understand, giving excellent service. Of the heavier machines, Triumphs and B.S.A.'s, with a sprinkling of the Norton and Douglas, are also represented, and of the sidecar twins only the new Matchless and A.J.S. are to be seen about."

Motor Cycles for India.

MR. C. W. BOWLES, State Engineer, Patiala, Punjab, makes the following suggestions:

"For India two classes of machines should be catered for—(a) For use in cities and cantonments. (b) For district and touring purposes.

"For (a) the class of machine required is the simple $3\frac{1}{2}$ h.p. or 4 h.p. single-cylinder, with all its fine feathers on, if it likes, by which I mean, three speeds, gear cases galore, etc.; but the only real necessities are a free engine, a kick-starter, and a direct drive from the engine to the back wheel by a good belt.

"For (b) the twin-cylinder of not less than 6 h.p. is desirable, for this, in nine cases out of ten, has to run a sidecar with it, and do fairly long journeys at a stretch, a journey which may mean fifty miles, wherein no possible help, spares, petrol, or oil can be obtained, and to carry a servant, bedding, and a suitcase.

"The roads in India are very fair, but are worn by the bullock carts into ruts, and all wear comes on to the same track. The ordinary cart has its wheels about 4ft. 6in. apart, and the bullocks walk in the same line, so it is necessary to have one's sidecar to conform to the ways of the bullock carts.

"Now as regards the requirements for the users of (b), I recommend the following: Wheels, 28in. x 3in., detachable, disc type, and strong spring front forks, trussed type. Springs to the rear wheel not really necessary, till such time as an ideal springing is ensured. In the meantime a good spring saddle, and, if required, a spring seat-pillar. Brakes to both wheels of V type; three speeds, with kick-starter on the right; magneto ignition; electric lighting set separate from the ignition; clutch to be of cork inserts and plates; enclosed chain cases throughout; efficient splayed mudguards with good clearance between tyres, and side pieces to them; sprung footboards; stand to back and front

wheels; cut-out to exhaust; clearance at least 8in.; large tool-cases each side of the machine (not little sandwich boxes as usually fitted), large oil and grease-retaining hubs; and large sized oil and grease cups, not the usual fitment, into which a point of a pin can with difficulty be pushed. The chains, clutch, and cases should be to the right of the machine, also the valves (not between the cycle and sidecar, as one sees so many chains, etc., fitted)."

Sound Sense from Queensland.

MR. R. S. ADAMS, writing from Central Queensland, opens his letter with the statement that "it takes a good deal to drive the out-back Australian into ink." Our overseas post-bag hardly hears this out! He continues:

"For a long time we have been reading *The Motor Cycle* here, and have read many letters from Australia appearing in the paper.

"Take the 'Awful Roads' complaint. Australia is the most thinly populated country of any size on the globe. Moreover, it is the 'newest' country from the point of view of civilisation. Any sane being never expects to find in the newer countries roads similar to the European highways, which date from the Roman times in many cases, and beyond that period perhaps. We must accept comparatively poor roads as part of the programme till the population becomes large enough to provide the necessary revenue for road-building. The man who buys a motor cycle in this country should know that he is in for a rough time more or less according to locality.

"Australia has approximately the same area as the United States of America. In a country of so considerable size, all kinds of country are met with. Here, in Central Queensland, most of the hinterland is open black soil downs; it is similar to the Canadian prairie in some ways, and the South African veldt in others; but the 'black soil' is, I think, unique. The 'roads' are like Topsy—they just grow. In the first place, a waggon meanders out to some newly opened up cattle or sheep station, and its tracks are followed by other traffic till the tussocky grass is worn down. One can trace it for miles ahead like a long dark ribbon. Where the traffic is light the grass between the wheel tracks is never worn down, so that you have twin tracks running parallel, and each one about a foot wide. We have months and months without rain sometimes, and these tracks beat down firm and smooth; it takes practice to enable the motor cyclist to keep the narrow track, but once the knack is mastered it is possible to ride for hundreds of miles through the pure, dry air and across glorious country as fast as the old jigger can clip along.

"But, if a storm cloud shows on the horizon, it is just as well to give the engine still more juice. Once rain falls in this country it is the end. Twenty points or more usually mean leaving a motor cycle, though a car, with its wide mudguard clearance, can battle along up to a certain point. The black soil 'picks up,' and goes on doing so till the mud jams between the tyre and mudguards, and both wheels lock tight. In a frantic effort to keep going the rider gouges this stuff out with a stick or screwdriver, but another fifty yards... pulls him up again.

"Sometimes, while the ground is still wet after rain, cattle will wander along the road for miles. In drying it sets hard, and every hoof track is as clearly defined as in a plaster of Paris cast, and it will remain so till the next rain. Under such circumstances, we lay our motor bicycles up here and use horses till conditions are more suitable. Why make a martyr of oneself in these matters? The motor cycle in the out-back has a definite place in the scheme of things; but to ask it to do work that could be done more easily and efficiently on horse back, or in a light buggy, is only going to retard its popularity.

"The monotonous bleat concerning the conservatism of English designers begins to pall, and is mostly born of ignorance. In buying a new machine of English design, my only complaint is that I cannot decide which is, for my needs, 'the best of the best.' I am like the child in the sweet shop with a penny to spend.

"If, after studying the 'Buyers' Guide' in *The Motor Cycle*, the overseas rider is unable to find a machine to meet his needs, I would suggest that he would perhaps be, after all, better served by a caterpillar tractor or a good substantial pair of skis."

TRICK RIDING IN HANDCUFFS.

Interesting—but not Recommended!

MOTOR cycle trick riding has come to be regarded as the prerogative of the cinema, and although trick (pedal) cyclists are almost as common in the average British music hall as low comedians, the acrobat on the self-propelled two-wheeler is a rarer species. Perhaps, fortunately.

Its very novelty alone makes the spectacle an interesting one; and it was in this frame of mind that we journeyed out the other day to witness Mr. P. Aherne give a selection from his repertoire of "stunts" on a Ner-a-Car. As may be gathered from the pictures, we spent quite an entertaining afternoon.

Trick riding that is, perhaps, not so easy as it looks. In some of these pictures, which were *not* done for the cinema, it will be noted that the rider is handcuffed.

The rider did everything except turn somersaults, and we understand he does this, too, at very special request! Then, "wearing" a pair of regulation handcuffs, he repeated

practically all his most difficult feats; and indeed, once going, he seemed to have little use for his hands at all. Had the steering lock of his machine permitted, we are sure that he could have journeyed back and fore with his hands tied behind his back. As it was, he had to "reverse" to turn round. And all the while it appeared childishly easy.

ANTI-DAZZLE HEAD LIGHT TESTS.

OFFICIAL certificates have been published concerning R.A.C. tests of two Salisbury Anti-Dazlo head lights. In the first model the device is mounted in a lamp with a lens mirror behind the electric bulb as the principal reflector, and with a small lens mirror in front of the bulb that throws the light back to the principal reflector. The upper part of the front glass of the lamp has saw-tooth indentations facing outward. With a 44.8 c.p. bulb at 12.6 volts pressure the effective forward illumination was 234ft. within 7½ft. of the centre line of the beam. Side illumination was much damped down, for 15ft. from the

centre line of the beam the effective illumination was but 56ft. At eye level no dazzling effect from the lamp was experienced nearer than 82½ft. from the source of light, which must be considered satisfactory.

The second device consisted of a lamp with a parabolic reflector with the bulb placed centrally at the back. The front of the bulb was covered with a patch presenting a silvered surface towards the light and a black surface towards the front glass of the lamp. In this model the front glass had saw-toothed indentations on its inner side and was plain on the outside.

CYCLE CARS *under* TEST

THE 8 h.p. Tamplin cycle car is an extraordinarily interesting vehicle, because it so narrowly misses genuine greatness in what is probably the thorniest sphere of motor-ing design. The creation of an entirely satisfactory cycle car has never yet been achieved. In the teeth of so many failures the Tamplin designer was ambitious; he aimed at combining motor cycle performance and economy with car comfort. His ambition has overleaped itself; but in overleaping he has landed on his feet.

Economy and Hill-climbing.

To expound this enigma more precisely, the sidecar outfit gives us economical speed without adequate comfort (remember the exposure of its driver!). Certain cheap and sedate four-wheelers give us economical comfort without speed. The Tamplin essays to provide all three. It runs sixty to seventy miles on a gallon of fuel, and it can touch 55 m.p.h. on the flat. It can climb most hills on top gear. It

Inter-connected clutch control and braking system. Observe the block engaging the gear box pulley. The left side pedal operates both the clutch and countershaft brake.

can scream up our most infamous freak hills on first or second gear at a terrific bat. It can restart from rest anywhere. In all its gaits it resembles a motor bicycle of power and reputation—you plan your trips with that superb disdain of gradient which the motor bicycle inspires. Simultaneously it is sprung on all its wheels. Its occupants sit on cushions, not

THE 8 h.p. TAMPLIN.

ENGINE: 8 h.p. J.A.P.

LUBRICATION: Hand pump.

TRANSMISSION: Chain and bell.

GEAR BOX: Sturmey-Archer three-speed.

SPRINGING: (Front) Coil; and (rear) quarter-elliptic.

PRICE: £145.

saddles. They are protected from the weather in front by a glass wind-screen; on both flanks by the sides of the body; and overhead by a neat hood covered with black fabric. This catalogue of praises suggests that the threefold ideal of speed, comfort, and economy had been fulfilled. Actually, greatness has been missed by a hair's

breadth if we interpret a "great" motor to be one which all the world and his wife will buy.

Weight-power Ratio.

This is how it has happened. You can only get a really fast machine which is cheap to run if you establish a high power-to-weight ratio. The Tamplin weighs next to nothing, and its engine is the famous 8 h.p. J.A.P. One imagines that the designer began with a conventional layout, and found that the weight was too high, the speed and climbing less than he desired, and the upkeep a trifle more than he deemed desirable. He ransacked his brain to find some remedy for all these disappointments, and finally tried the experiment of cutting down the track to extremely narrow dimensions. The experiment succeeded. The machine is as fast as a sidecar outfit—that is to say, nothing can pass it uphill, and only the high-powered cars can hoot past it on the flat, whilst the maintenance charges remain low. But a price must be paid for success; and all the narrow-track cycle cars pay the same penalty—instability.

Front suspension system of the Tamplin and steering rods.

Cycle Cars under Test.—

Simplicity is the keynote of the body design, the sides being constructed of fibre.

This penalty must not be overstated. On a good road it dwindles to nothingness. On smooth, wide tar the most jaundiced critic could pick no holes in the conduct of a Tamplin. But put the Tamplin on really bad pot-holes, and you are instantly limited to a very modest speed; a wide throttle opening might put it right out of control. Over really bad ruts its case is even worse. Steering becomes a job for two strong hands. Mind you, the occupants receive none of those spine-jarring jolts which sometimes sicken the rider of a rigid-framed bicycle. The springs act; but they cannot protect a light chassis from the ruthless pits in the macadam—and to-day's roads are not yet in pre-war condition. Cut down the pace, and the machine bobs and floats over the bumps fairly obediently, but just so that the driver relishes a few inches of surplus clearance on each side when he nips between a cart and the hedge.

It follows that lurid corner-work is forbidden to the driver of a Tamplin. In a week's testing, corner-work was gradually accelerated to the tune of perhaps 50%, and never made a wheel lift; but my cornering was mild compared to what one dare do on a motor bicycle, a sidecar, or a racing car.

This need for caution on bad going and round corners is, as far as seven days inform me, the only penalty which a Tamplin owner pays for trying to secure speed, comfort, and economy at £145—the price of a sidecar.

Motor Cycle Specification.

The details of the Tamplin specification are all excellent. It contains nothing to perplex a motor cyclist. Engine, gear box, drive—they all follow motor cycle practice. Gear-changing requires no sleight of hand—the novice's first change is like a knife slicing butter. The countershaft belt pulley is very big, very far from the wheel rim, fully sheltered from wet, and hoisted high off the road. Pouring rain, dripping roads, and a six inch watersplash all failed to induce belt slip. The brakes are probably inferior to none, with the exception of a Grand Prix racing car. The carburetter is automatic when the engine is once started. This last operation is performed by an ordinary kick-starter pedal operated from the driving seat.

There is little to be said in the way of criticism, apart from the discussion of the above layout. The metal bonnet is secured by two spring tongues and a pair of straps; the latter have to be cast off before the engine can be doped, or the petrol turned off, and easier access would be welcome. No reverse is fitted, simply and solely because the Sturmey-Archer people have not yet marketed such a gear box. The machine is very light, but none too easy to push round with a stout passenger on board, and there are no projections affording a very comfortable grip if one prefers to lift it round. Its length and big steering radius demand plenty of room if it is to be turned round under power *à la* sidecar.

Undoubtedly, the Tamplin is most at home on smooth, wide tar, where its running will evince no flaw. Driven with sense and caution, it is equal to fierce corners and lorry-shattered

roads; and a little caution under such conditions is a small price to pay for the privilege of owning a two-seated car as fast as some sports models, as cheap to run as many motor bicycles, and cheaper to buy than many sidecar outfits of smaller power.

BENEDICT.

Cockpit of the Tamplin, as seen by the passenger.

The 8 h.p. Tamplin, a well thought out design, to seat two passengers.

Portsmouth and District M.C. and L.C.C.

Sixteen started and all finished in the recent reliability trial over a hundred-mile course. There were two observed hills (Henley and Dunton), a brake test, and two secret checks. The winner was H. Harrison (4 Douglas sc.), 20 marks lost; A. Arnold (8 Matchless sc.), 23 marks, second; and V. Coatanche (4 James sc.), 31 marks, third. One lady member, Miss Trowbridge (O.K.-Junior), was awarded a special prize.

Solihull Old Boys M.C.C.

Formed during the early part of the year, the membership of this club is now approaching fifty, and several very successful events, including a miniature T.T., over a half-mile course, have been run off. The secretary, Mr. J. W. V. Wood, Stratford Road, Shirley, Warwickshire, would like to hear from any Solihull old boy who wishes to join.

On October 7th a hill-climb will be held on a bit of unused Roman road, with a grade of 1 in 7 at the top.

Surrey M.C.C.

Provisional results of the members' hill-climb are as follows:

CLASS 1 (up to 350 c.c.).—1. R. P. Robinson (2½ Wolf), 46s. (3.0); 2. C. Heath (2½ Sparkbrook), 65.2s. (3.0).

CLASSES 2 AND 3 (over 350 c.c.).—1. W. J. Collis (3½ Rudge), 31.4s. (1.6); 2. G. H. Williams (3½ Rover), 30s. (4.8); 3. G. Hopkins (6 Matchless), 29.2s. (3.0).

CLASS 4 (any machine).—1. E. Manning (3½ Norton), 25.4s.; 2. G. H. Williams (3½ Rover), 30s.; 3. G. Hopkins (6 Matchless), 29s.

CLASS 5 (passenger machines).—1. J. Potter (8 G.N.), 44s.; 2. F. N. Edney (7 Indian sc.), 36.8s. (2.0); 3. P. W. S. Bulman (8 Zenith sc.), 43.2s.

CLASS 6 (1914 or earlier make).—1. W. J. Collis (3½ Rudge), 33s. (1.6); 2. G. Hopkins (6 Matchless), 29.6s. (3.0); 3. S. L. Manners-Smith (3½ Triumph), 35.2s. (1.4).

CLASS 7 (standing start, stop, and re-start).—1. J. Potter (8 G.N.), 66.4s.; 2. C. Heath (3½ Sparkbrook), 76.4s.; 3. Lt. W. A. Turner (3½ Rudge), 64.2s. (3.4).

Fastest time of the day—25.4s.—was made by E. Manning (3½ Norton). Penalties for T.T. models shown in brackets.

Truro and District M.C. and L.C.C.

P. Phillips, on a 3½ h.p. Norton, made fastest time of the day at the recent hill-climb at Helston Waterhill, thus winning the Pearson Cup. Results:

300 c.c. OPEN.—1. W. L. Thomas (2½ New Imperial), 44.3s.; 2. W. Pasco (2½ Bown-Villiers), 1m. 15.3s.

350 c.c. OPEN.—1. W. L. Thomas (2½ New Imperial), 44.3s.; 2. H. C. J. Cornelius (2½ Douglas), 50.2s.

500 c.c. CLUB.—1. A. Asheton-Salton (3½ Brough), 36.3s.; 2. P. Phillips (3½ Norton), 37s.

500 c.c. OPEN.—1. P. Phillips (3½ Norton), 35.3s.; 2. A. Asheton-Salton, 36.1s.

SPECIAL TRIUMPH CLASS.—1. H. F. Beany, 40.8s.; 2. A. J. Richards, 44.8s.

UNLIMITED CLUB.—1. P. Phillips, 34.3s.; 2. A. Asheton-Salton, 37s.

UNLIMITED OPEN.—1. A. Asheton-Salton (3½ Brough), 35.4s.; 2. L. Lavanchy (3½ Norton), 40.8s.

UNLIMITED SIDECAR.—1. J. W. Fry (8 Royal Enfield), 46.3s.; 2. W. L. Thomas (6 Royal Enfield), 51.1s.

Week-end Club Events.

Sept. 29.—North Wales M.C.C. Fault Finding Competition.

Sept. 30.—Truro and District M.C. and L.C.C. Afternoon Run to Lostwithiel.

Oct. 1.—Oxford M.C. Hill-climb at Aston Hill.

Oct. 1.—Coventry and Warwickshire M.C. Manville Trophy Trial.

Oct. 1.—Coventry Triangle M.C. Run to Naseby.

Oct. 1.—North Lindsey A.C. Petrol Consumption Test.

Oct. 1.—North-West London M.C.C. Novelty Competition.

Oct. 1.—Edinburgh and District M.C. Hill-climb.

Oct. 1.—Birmingham M.C.C. Sporting Trial.

Oct. 1.—Surrey and District M.C.C. Pullin Cup Trial.

Oct. 1.—West Kent M.C. Run to Titsey.

Oct. 1.—Deesbury and District M.C.C. Competition.

Oct. 1.—Surrey M.C.C. Bateman Cup Trial.

Oct. 2.—Bradford M.C. and L.C.C. Merrick Cup Non-stop Trial.

Oct. 2.—Barrow and District M.C. Reliability Trial.

Oct. 2.—Leeds M.U. Run to Barnby Moor.

Oct. 2.—Wolverhampton M.C.C. Run to Wellington Wreckin.

Oct. 2.—Bourne and District M.C.C. Country Run.

Oct. 2.—Halifax and District M.C.C. Reliability Trial.

Oct. 2.—Liverpool M.C. Half-day Trial.

Ipswich and District M.C.C.

Results have now been announced of the recent sporting reliability trial:

SOLO CLASS.—1. W. J. Prettv (4 Triumph), gold medal; 2. E. T. Elliot (4 Indian); 3. A. G. Mann (3½ Sunbeam).

SIDECAR CLASS.—1. D. Cornell (8 New Imperial sc.); 2. E. C. Lunnis (8 Sunbeam); 3. Miss L. Sheppard (7-9 Harley-Davidson sc.) and R. Feau (4 Triumph sc.) tied.

North-western Centre A.C.U.

Spendid weather, excepting a strong head wind, favoured the Southport Sands speed trials on the 17th inst. Some very interesting duels were witnessed between T. C. de la Hay, T. Simister, L. Mitchell, and L. W. Hollowell (complicators were despatched in pairs).

CLASS 1a.—1. B. Houlding (2 Matador), 40.3s.

CLASS 1b.—1. N. Houlding (2 Matador), 43s.

CLASS 2a.—1. J. Cooke (2½ New Scale), 40s.

CLASS 2b.—1. J. Cooke (2½ New Scale), 39s.

CLASS 3a.—1. T. C. de la Hay (3½ Sunbeam), 29.1s.; 2. L. Mitchell (3½ Norton), 31.3s.; 3. L. W. Hollowell (3½ Norton), 33.1s.

CLASS 3b.—1. E. W. Wilkinson (3½ Sunbeam), 33.3s.; 2. L. W. Hollowell (3½ Norton), 36s.; 3. C. Waterhouse (3½ Sunbeam), 36.1s.

CLASS 4a.—1. T. C. de la Hay (3½ Sunbeam), 29.1s.; 2. E. W. Wilkinson (3½ Sunbeam), 31s.; 3. L. Mitchell (3½ Norton), 32.3s.

CLASS 4b.—1. E. W. Wilkinson (3½ Sunbeam), 31s.; 2. C. Waterhouse (3½ Sunbeam) and L. W. Hollowell (3½ Norton), 34.1s.

CLASS 5a.—1. T. C. de la Hay (3½ Sunbeam), 30.1s.; 2. T. Simister (3½ Norton) and L. Mitchell (3½ Norton), 32.1s.

CLASS 5b.—1. E. W. Wilkinson (3½ Sunbeam), 33.3s.; 2. P. Baron (7-9 Indian), 35.1s.; 3. C. Waterhouse (3½ Sunbeam), 35.1s.

CLASS 7a.—1. T. C. de la Hay (3½ Sunbeam), 36.1s.

CLASS 7b.—1. C. Bullough (3½ Norton), 41.1s.

CLASS 8a.—1. T. C. de la Hay (3½ Sunbeam), 39.1s.

CLASS 8b.—1. C. Bullough (3½ Norton), 42.3s.

CLASS 9a.—1. T. C. de la Hay (3½ Sunbeam), 37.1s.; 2. T. Simister (3½ Norton), 39.1s.

CLASS 9b.—1. P. Baron (7-9 Indian), 43.1s.

* Fastest time of day.

Coventry and Warwickshire M.C.

Over fifty entries have been received for the Manville Trophy Trial, to be held on Saturday next.

Dublin and District M.C.C.

Awards in connection with the recent twenty-four hours trial have been announced as under:

GOLD MEDALS.—A. Carton (3½ Norton), J. McAllister (4 Triumph), T. Woods (4 B.S.A.), and F. O'Connor (3½ Norton).

SILVER MEDALS.—P. H. Hulse (4½ B.S.A.), J. Browne (2½ Douglas), T. Henry (2½ Velocette), T. E. Greene (2½ Enfield), H. Bell (2½ James), and P. S. Doyle (4 Triumph).

BRONZE MEDALS.—J. Murphy (4 Triumph), C. S. Kettle (4 B.S.A.), and J. A. Curville (4 Triumph).

LIGHTWEIGHT PRIZE.—Divided between T. Henry, J. Bell, and T. E. Greene.

Stockport and District M.C.

Entries for the speed trials on Rushup Edge on the 18th inst. totalled two hundred. Results:

275 c.c. SOLO (Standing Start).—1. F. Boulton (2½ New Imperial), 40s.; 2. N. B. Newton (2½ New Imperial), 41s.; 3. W. Vines (2½ Velocette), 46.3s.

275 c.c. SOLO (Flying Start).—1. F. Boulton (2½ New Imperial), 35.1s.; 2. N. B. Newton (2½ New Imperial), 36.1s.; 3. W. Vines (2½ Velocette), 40s.

350 c.c. SOLO (Standing Start).—1. B. Watts (2½ Dot-Jap), 36.1s.; 2. E. H. Hunt (2½ A.J.S.), 37.1s.; 3. F. Boulton (2½ New Imperial), 38.1s.

350 c.c. SOLO (Flying Start).—1. B. Watts (2½ Dot-Jap), 31.1s.; 2. E. H. Hunt (2½ A.J.S.), 32.1s.; 3. F. Boulton (2½ New Imperial), 34.1s.

400 c.c. SOLO (Standing Start).—1. B. Watts (2½ Dot-Jap), 35.1s.; 2. E. H. Hunt (2½ A.J.S.), 37.1s.; 3. F. Boulton (2½ New Imperial), 39.1s.

400 c.c. SOLO (Flying Start).—1. B. Watts (2½ Dot-Jap), 32.1s.; 2. F. Boulton (2½ New Imperial), 34.1s.; 3. N. B. Newton (2½ New Imperial), 36.1s.

550 c.c. SOLO (Standing Start).—1. L. Mitchell (3½ Norton), 31.1s.; 2. E. W. Wilkinson (3½ Sunbeam), 31.1s.; 3. T. Simister (3½ Norton), 32.1s.

550 c.c. SOLO (Flying Start).—1. L. Mitchell (3½ Norton) and T. Simister (3½ Norton) tied, 29.1s.; 3. F. H. Andrews (3½ Norton), 30.1s.

750 c.c. SOLO (Standing Start).—1. L. Mitchell (3½ Norton), 32.1s.; 2. E. W. Wilkinson (3½ Sunbeam), 32.1s.; 3. T. Simister (3½ Norton), 33.1s.

750 c.c. SOLO (Flying Start).—1. L. Mitchell (3½ Norton), T. Simister (3½ Norton), and E. W. Wilkinson (3½ Sunbeam) all tied, 29.1s.

UNLIMITED SOLO (Standing Start).—1. L. Mitchell (3½ Norton) and T. Simister (3½ Norton) tied, 32.1s.; 3. E. W. Wilkinson (3½ Sunbeam), 32.1s.

UNLIMITED SOLO (Flying Start).—1. L. Mitchell (3½ Norton), 27.1s.; 2. E. W. Wilkinson (3½ Sunbeam), 29.1s.; 3. T. Simister (3½ Norton), 30.1s.

550 c.c. SIDECAR (Standing Start).—1. G. Cowley (3½ Norton sc.), 38.1s.; 2. T. Simister (3½ Norton sc.), 39.1s.; 3. F. H. Andrews (3½ Norton sc.), 42.1s.

550 c.c. SIDECAR (Flying Start).—1. Geo. Cowley, jun. (3½ Norton sc.), 34.1s.; 2. C. G. Bullough (3½ Norton sc.), 36.1s.; 3. F. H. Andrews (3½ Norton sc.), 37.1s.

750 c.c. SIDECAR (Standing Start).—1. Geo. Cowley, jun. (3½ Norton sc.), 36.1s.; 2. P. Platt (6 Bradbury sc.), 38.1s.; 3. T. Simister (3½ Norton sc.), 39.1s.

750 c.c. SIDECAR (Flying Start).—1. Geo. Cowley, jun. (3½ Norton sc.), 33.1s.; 2. P. Platt (6 Bradbury sc.), 35.1s.; 3. T. Simister (3½ Norton sc.), 36.1s.

UNLIMITED SIDECARS (Standing Start).—1. Geo. Cowley (3½ Norton sc.), 37.1s.; 2. P. Platt (6 Bradbury sc.), 39.1s.; 3. T. Simister (3½ Norton sc.), 40.1s.

UNLIMITED SIDECARS (Flying Start).—1. Geo. Cowley, jun. (3½ Norton sc.), 31.1s.; 2. T. Simister (3½ Norton sc.), 35.1s.; 3. F. H. Andrews (3½ Norton sc.), 35.1s.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

SUNDAY COMPETITIONS.

Sir,—I am so pleased to see the firm stand you take against Sunday competitions. My confidence in your paper is strengthened by this knowledge.

L. BLOWERS.

BICYCLE OR "PUSH-BIKE"?

Sir,—In reply to "Another Anfilder's" remarks regarding "Ixion's" observations on the term "push-bike," might I suggest that if your correspondent is so thin-skinned that he cannot take "Ixion's" remarks in the genuine spirit in which they are written, he refrains from showing his ignorance unless he can compile a sound argument?

London, S.E.15.

PUSH-BIKE.

PETROL PRICES—HERE AND IN AMERICA.

Sir,—When is petrol going to be the *legitimate* price? We all read in the papers that it is cheaper by 11d., after allowing for transit expenses, in America, and there the matter seems to drop. Have the A.A. and similar protecting bodies all fallen asleep, or are they not powerful enough to do anything in the matter? It seems to me that if all motorists would agree to give up motoring for a month, or, in plain words, "go on strike for a little while," we should soon see if the price would come down.

Chelsea.

F.L.T.

EASIER EASY PAYMENT SYSTEMS.

Sir,—Why not put the motor cycle within the reach of the average working man? The deposits asked for by the motor cycle agents are too high.

If one could afford to pay £15 down and £3 a month, one could afford to buy right out. If the agents could lower the deposits and extend the payments, say over about twenty months, it would put a motor cycle within the reach of thousands who, like myself, must be content to read about them.

H. M. D. HARVEY.

Sir,—I quite agree with "Old Reader" that the deposit and payments required, together with time allowance, are by far too much to expect from the general working class pocket. Why motor cycle agents should base their business upon such terms I fail to see, taking into consideration the value one can now obtain in most lines of business, which carry a period of twenty, twenty-four, and even thirty months' credit.

I know many (myself included) who would be only too willing to take up the sporting pastime if they could secure an easier condition which would assist them to overcome the harshness of the first outlay.

London, S.W.19.

ANXIOUS.

Sir,—I should like to endorse the opinion of "Old Reader" as to the desirability of motor cycle agents giving more extended terms for the purchase of a motor cycle or sidecar. There must be many persons who, like myself, are in regular employment, and could afford to pay, say, £5 or £6 per month for eighteen or twenty months, besides an initial small deposit, but to whom the provision of £8 to £10 per month would be difficult or impossible.

In the early part of this season a well-known company's advertisement in *The Motor Cycle* stated that the balance was payable in 21 monthly instalments. "Here," thought I, "is the opportunity I have wanted. Now I shall be able to get a machine this year after all." But, alas, on communicating with the advertisers, I found that due to an error the figures were reversed, and that they were only prepared to accept payment of the balance in the

usual twelve monthly instalments. Consequently I had to go without my machine. I hope to be in a better position next year, but anyhow have lost one previous season's riding in the loveliest of summer weather.

After all, a considerable amount of money is necessary to buy a good motor cycle or sidecar nowadays, and any scheme which makes it easier to pay that money ought to lead to increased business.

I hope that some of our leading agents will think this matter over, and give us a real easy payment scheme next year.

ROAD LOVER.

London, E.5.

DAZZLING HEAD LAMPS AND THE MOTOR CYCLIST.

Sir,—Would it be possible to issue an appeal to car drivers to lower their brilliant head lights when approaching not only one of their own fraternity, but other users of the road? I have felt inclined to write you before, and am only doing so now as the result of a rather bad crash I had on returning from the Essex Motor Club's run on the 10th inst., which was due to my being dazzled by the lights of an approaching car and running into the kerb. The driver of the car on seeing me fall switched off all his lights, but did not stop to enquire if I was hurt. Fortunately I escaped with a few minor grazes and bruises, although my Douglas suffered a good deal. This occurred between Dnnstable and St. Albans.

I believe there has been some controversy on this subject in *The Autocar* recently, and one correspondent, who does not agree with the dimming of lights, offers, among others, the excuse that it wears the switches so quickly!

When one considers the little trouble it is for a driver to dim his lights, and the benefit that others accrue from this action, it is rather extraordinary that it has not become a more universal courtesy of the road.

H. W. HARRINGTON.

NURSING A THOROUGHbred.

Racehorses are never required to travel under their own power to the racecourse; why should motor cycles? This, however, is not Bert. Kershaw's only reason for using the above method of transporting his competitions New Imperial lightweight to the scene of its activities; he is able to take Mrs. Kershaw with him on a Tan-Sad.

"80 M.P.H." BRITISH BIG TWINS.

Sir,—In response to my letter in a previous issue, Mr. George Brough has endeavoured to judge me as an "ignoramus" so far as my statements regarding the engine of the Brough Superior are concerned.

Having assisted technically in the manufacture of this engine, I claim that I am aware of what statements I make. This engine was designed and is solely manufactured by Messrs. J. A. Prestwich and Co., Tottenham, and not by Mr. Brough. At the J.A.P. works this engine is known as the "90 mm. overhead," and has been a product of that firm (J.A.P.) since 1913.

In recent years this engine has had a few modifications, and (I suppose) by that it is now known as a 1921 model. Furthermore, I still adhere to my previous statements that this type of engine has been fitted in other makers' frames, and ridden at Brooklands for speed purposes before these modifications were carried out. Perhaps Mr. Brough has not that knowledge before him. I quite agree with Mr. Brough that the Brough Superior does all he claims it to do. Why not, when we have $3\frac{1}{2}$ h.p. singles doing 90 m.p.h.?

However, the point is, Can the Brough Superior beat the Americans in a 500 miles duel, as our former correspondent thinks it can? It certainly would be a great success for Mr. Brough's and J.A.P.'s production.

London, N.17.

OBSERVANT.

COSTS OF SPARES AND COMPONENTS.

Sir,—We have noted the letter from your correspondent "Pourquoi," and would like to offer an explanation as to why a machine built entirely of spare parts is of necessity more expensive than a machine sold from series production. The cost of labour involved in erecting finished parts into a complete machine is a very small item in the general production costs of that machine.

When a manufacturer puts a series of machines into production, he calculates on selling such production within a limited time from the issue of the machines from his works, and, in fixing the price of his machine, he has to allow for the interest, etc., on the money locked up in such machines, between the period of the original purchase of materials, up to the complete sale of the machine and the receipt of the proceeds.

Under ordinary commercial conditions, this period is a comparatively limited one.

• When, however, the manufacturer has to turn out the spare and replacement parts for such machine, he does so with the knowledge that the money involved is locked up for an unknown period, and during that period it is unproductive; consequently, a higher rate of interest has to be calculated in order to cover the capital involved, with a consequence

that the parts concerned must each bear a higher proportional charge, and the cost of each part is necessarily thereby increased to the purchaser.

Furthermore, as models become obsolescent or obsolete, the quantity of each replacement part put in hand from time to time must of necessity be smaller, with correspondingly increased manufacturing costs. Moreover, it is impossible for a manufacturer to forecast the proportions in which particular parts will be required. He is therefore compelled to manufacture an average over every component in the machine and run the risk of a large number never being wanted. No manufacturer can afford to leave his customers without spare parts for obsolescent (or even obsolete) machines within a reasonable limit, and must therefore take the risk—a very real one, as every manufacturer knows in practice—of being finally left with a quantity of manufactured parts on his hands, for which in course of time there is no demand, and which has practically no scrap value, and yet which represents a heavy original cost in material, labour, capital outlay, and interest on the money involved.

It is such factors as these that entirely govern the extra cost invariably charged by motor manufacturers for spare parts.

The question of competition will always keep a manufacturer's prices for replacement parts to a reasonable level; further, for obvious reasons, no individual manufacturer dare put prices of his replacement parts to other than reasonable figures, otherwise he would run serious risk of prejudicing the sale of his machines.

The spare parts supply side of a branded motor cycle manufacturing business presents, from many aspects, more problems and anxiety than the manufacture of new machines. In point of fact, the manufacture and supply of replacement parts is an actual bugbear to the majority of manufacturers. They would only be too glad, in the larger number of cases, to finish their responsibility with the termination of their guarantee, without the moral obligation, which at present they cheerfully carry out, of assisting the purchaser to keep the machine in running order for a period of years.

F.N. (ENGLAND), LTD.,

A. ERNEST GELDER, Managing Director.

Sir,—In endeavouring to ascertain the reason why the relative costs of spare parts and complete machines are out of all proportion to each other, I fear your correspondent "Pourquoi" is seeking the solution of a problem which I, and doubtless many others, have given up as hopeless.

It is hardly feasible, to my mind, that makers sell their machines at a loss or profiteer on spares and renewals, but I venture to suggest that they get a very handsome profit from both.

A week or so ago I went to a local garage for an exhaust valve for my $2\frac{1}{2}$ h.p. machine, for which I was asked 5s., and when the proprietor showed me a valve for a Ford, price 1s., it seemed to me that there was little or no justification for a difference of 4s. AB 9056.

Droitwich.

Sir,—I feel sure that the letter of your correspondent "Pourquoi" will call forth a response from hundreds of motorists throughout the country. Possessing a well-known 4 h.p. single, I had the misfortune to break the portion of the frame known as the back stay, the fracture taking place at what seems to be a weak portion of the frame. Judge of my surprise and disgust when I was informed that the price of a new part would be £3 8s., without the cost of taking down the machine and fitting. And this in days when we hear so much about "mass production." I would issue a note of warning to any young fellow before he goes in for the sport to count well the cost, for buying a machine is by no means the only outlay, and the totally fictitious values placed upon parts make it impossible for the sport to flourish as it otherwise would.

A.X.

Abergavenny.

[Both sides of the question are given in the above letters, which are only a small selection of the many that have reached us on the subject.—ED.]

**IS THE LIMIT REACHED? A SIDECAR CHAR-A-BANC.**

Whatever may be said against gigantic sidecars such as that shown above, it cannot be said that Mr. McDonald, of Ilford—who made it in his spare time—has not considered the comfort of his passengers. The seating arrangement appears to be equal to the average four-seater light car. The motor cycle is a 7-9 h.p. Indian.

LIGHTWEIGHTS FOR AUSTRALIA.

Sir,—We note in a recent issue that "J.H.H.," of New South Wales, while pleading for a greater variety in the export of British lightweights, seems to desire that that greater variety should be amongst four-strokes only.

This rather confirms our opinion that the motor cycle fraternity, both in Australasia and other countries, has not enquired deeply enough into the merits of the two-stroke, and hence does not realise the enormous possibilities of this type.

As pioneers in British lightweight construction, we, in our earliest experience, had, in common with many other manufacturers, a decided leaning towards the four-stroke; but, realising the immense value of simplicity, we also felt that, under a process of correct development, the two-stroke should take the lead in this direction.

Having definitely arrived at this conclusion, we set ourselves out to forward that development, with the result that we have evolved in the O.K.-Junior, with O.K.-Union engine, a two-stroke which is quite as powerful and efficient as the four-stroke, with the added advantage of extreme simplicity and lower cost, both as regards initial purchase and upkeep.

HUMPHRIES AND DAWES, LTD.

E. H. HUMPHRIES, Director.

SATISFACTORY SCOOTER SERVICE.

Sir,—I enclose herewith a photograph of myself and fellow worker on our Autogliders. I am sure if more district nurses could get to know of them many would avail them-

"District Nurse" expresses great satisfaction with the Autoglider as a handy means of transport in a hilly district. (See accompanying letter.)

selves of such a delightful method of transit. This is an exceedingly hilly district, but we find no difficulty in managing it with the Autoglider. DISTRICT NURSE. Cornwall.

IS THE GARAGE PROPRIETOR ALWAYS TO BLAME?

Sir,—There occasionally appears in your most excellent journal, and in the press generally, letters which lead the uninitiated to depict the average garage as a depot for rogues, thieves, hooligans, and general outsiders.

The garage proprietor is, generally speaking, too busy earning his bread (only thinly buttered) to reply to these somewhat one-sided attacks. Perhaps, also, he dare not raise a voice in protest, because he fears to lose customers who may chance to hear of his literary efforts.

May I therefore, through the medium of your columns, raise a solitary voice in protest of the unjust treatment only too often meted out to the garage proprietor.

I have two cases in mind which have occurred to me recently. They are in no way isolated, but form very good examples of the attitude which quite a large percentage of motor cyclists adopt in order to decrease their expenses. The cases in question are as follow:

(1.) A customer has repairs to an Enfield sidecar outfit. The sidecar is removed; the back stays, etc., removed; the frame welded; parts replaced; sidecar fitted and lined up; gears adjusted and new parts fitted; value £3 16s. 10d. He received a bill for £5 19s. 4d. all told. We hear no more. He does not return, but we know him to be a gentleman of

good standing. Our money presumably is safe. The account is rendered regularly. After thirteen months he announces that he will not pay for the welding because it went after a few weeks, and encloses a money order for a little over £4. He only does this apparently because we wrote asking for payment.

(2.) A gentleman gives permission for one of our branches to convey his hub-gear sidecar to our works for repair. On the way a bolt comes loose in the rear mudguard, with the result that the tyre is scored. The machine is returned, and we do not notice the scored tyre. The gentleman writes a very strong letter, and pays only a small portion of his account, deducting £3 2s. 6d. for a new tyre. Incidentally, the old tyre was very old, and he would have soon had to obtain a new one in any case. The new tyre was not purchased from us, and we would have been glad to apologise and provide him with a good second-hand one free. On writing to him he apparently refuses to take any notice of our letters.

Perhaps despite the large number of letters on the subject, and the fact that undoubtedly there are bad and dishonest garages, there is more reason for the garage to distrust the customer than the customer to distrust a firm who has a reputation to guard.

TRADE NUMBERS.

Sunderland.

EXPENSIVE SCRAPS OF PAPER.

Sir,—Can nothing be done to stop the Government still forcing money out of us already overtaxed motorists? Are both the "Unions" still asleep, or will they this time try to help us a little?

Three weeks ago I rode from London to Hunstanton, and had the misfortune to be caught in an extra severe thunderstorm. On completing my journey I found that the rain had penetrated my "water-proof" licence holder, with the result that the ink was washed out. Had Indian ink been used no harm would have been done. When I returned to London I went to the Guildhall for a new licence, but was charged 5s. for a duplicate. How much longer is the Government going to carry on like this?

X.Y.Z.

Finchley, N.3.

Sir,—Having occasion to go through Westmorland, I had to travel through a well-known market town, where the corporation had been amusing itself with a most efficient (?) tar sprayer. The road had then been sealed with small stones, which reminded me of currants in war-time tea-cakes—few and far between. To get to the point, on returning over the same road after heavy rain I found, to my horror, that the road was literally swimming with tar water. This beautiful and penetrating mixture alternately bathed myself and the licence holder, eventually entering the holder and staining a portion of the licence. I sent this to the authorities and asked them to ink it in again. I received a reply asking for 5s., on receipt of which they would renew it, and stating that my "holder must be faulty," which I naturally resent. I have been many hundreds of miles in wet weather, and not found it to leak, but one can hardly expect it to withstand a deluge of such penetrating liquid as tar water.

Is it fair that one should be charged exactly the same for helping the law (by keeping the card clean) as those who lose their licence by neglect? In any case, it is an imposition, as a shilling would amply cover cost of paper, ink, and "time."

Norton-on-Tees.

TARRED UP.

WHICH IS THE WORLD'S BEST SOLO MACHINE?

Sir,—In view of the recent correspondence in *The Autocar* regarding which car is generally acknowledged to be the best in the world, I think it would be interesting to have the opinions of some of your readers as to which solo machine holds the corresponding position among motor cycles. By this I mean the machine which, regardless of price, is considered the best from an all-round point of view, viz., reliability, silence, smoothness of running, excellence of finish, durability, etc. High speed alone counts for nothing. It will be noticed that I say solo machine; this point is important, because though some might consider, say, the 7 h.p. A.J.S. to be the best sidecar machine in the world, it would not be considered the ideal solo mount owing to its weight, size, etc. Though riding a machine of another make, my own idea of the Rolls-Royce of motor cycles is the 3½ h.p. standard Sunbeam. Allow me to add the usual disclaimer.

A. ARNOLD.

A LADY'S EXPERIENCES OF A SIDECAR SUBSTITUTE

Sir,—I have just returned from a few days' tour as a passenger in a Scott Sociable, and thought my opinion as a "middle-class," also middle-aged, woman motorist might interest your readers. The route included the Peak District, with its tortuous hills and varying surfaces—some excellent, some bad—and is one I have taken almost annually for the last twenty-five years. I must say I had the most-reliable and luxurious trip on the Sociable I have ever taken, and my vehicles have ranged from the push bicycle, a 5 h.p. Wolsley twenty years ago, to several well-known and high-class sidecars latterly. Among the Sociable's many good points I count most comfortable seating, ample luggage accommodation, ease of driving, reliability, great economy of petrol, excellent finish, and a good average speed, only dropping to low once in the hilly Peak country. My only criticism is the engine is rather noisy on low gear.

I am sure the machine is just the thing for many who require more room than the sidecar affords, but who are not in a position to pay £400 to £500 for a small car.

I enclose my card, from which you will see I am not interested in the machine in any way except as a critical and ease-loving
PASSENGER.
Nottingham.

SPECIAL EVENTS FOR SPECIAL MACHINES.

Sir,—I am writing to say that I do not think it exactly "sporting" of a couple of firms which enter club competitions with extra special machines; but I do think it sporting (in a way) for other men to enter these open competitions also when they know all too well beforehand they will be hopelessly beaten.

Again, is it fair that anyone should enter every available class, and win all the prizes, cups, etc., with these special machines, especially as these firms' turn out other models for the public for speed events, which are 20 m.p.h. slower? In my opinion, this kind of thing will eventually give all of us the "pip," and I think it high time that secretaries and committees barred such from competing, except in extra classes set apart for their special, unobtainable-by-the-public machines.

Anyway, I think that, in the event of not being able to work things as above, special classes should be set apart for *guaranteed standard* machines. Again, I would bar all extra special machines, which are not to be placed on the market, from competing in the T.T., or any other open event.

In conclusion, it is very refreshing to myself, and others besides, that there is a firm which does sell standard machines which are winning almost everywhere, except where these "specials" are also competing.

J. H. WILKINSON.

SIDECAR ATTACHMENTS.

Sir,—Wharfedale, in his article on the above subject, is distinctly less happy than usual in the treatment of his subject. To deduce that, because "masses of contorted tubing, applied in an unthinking manner . . . give a minimum of trouble," whereas "a rigid chassis, rigidly applied to the machine, may cause frame breakage in the latter," it is desirable to have the afore-mentioned "masses of," etc., is not quite up to par, "Wharfedale"!

The whole question of methods of sidecar attachment is in its present unsatisfactory state chiefly because, with one or two notable exceptions, no motor cycle manufacturers are manufacturing (as distinct from marketing) their own chassis. If they did, and were capable of learning from ocular inspection of their goods, after many months of use, hopes of improvement might arise. As it is, A makes a motor cycle, B builds a sidecar, and C fits the one to the other. Consequently, with the wide range of adaptability provided in the sliding split lugs of the usual type of chassis, motor cycle manufacturers content themselves with fitting one or two likely lugs to the motor cycle frame, and leave the very momentous question of fitting the two units together to C, who may vary from a man of brains and experience, in a back street garage, to a "fool of the family" (financed into motordom with all the swagger of a main road showroom) and his staff. The most prolific cause of trouble experienced with sidecar chassis connections is, undoubtedly due to faulty design and location of the clips used for attachment, which allow malalignment to develop, by reason of the clip's tendency to swivel when slightly slackened off.

It must be obvious that, to make one connection flexible, as suggested by "Wharfedale," and only allow flexibility by means of "whip" to the other connections, would speedily entail trouble, because of the crystallisation of the metal in constant "whip," not to mention the wear of the flexible joint itself. If a rigid chassis, rigidly attached, causes any breakage of the cycle frame, it may be due to faulty alignment, faulty fitting, or faulty frame! Surely "Wharfedale" has seen the usual garage squad of apprentices fit a sidecar, leaving the vertical alignment until all other connections are tightened up (!), then forcibly pulling the machine into vertical alignment, what time one of the crew drops the bolt into the seat lug connection, and the job is done!

How can they realise the abnormal stresses set up under such conditions, *even when the machine is at rest*? Imagine, then, what obtains under severe road conditions. Could one blame them if, provided with one forcibly flexible connection, they deduced that all the other connections must be flexible? A study of the Scott system affords an excellent example of a really scientifically triangulated rigid chassis, constructed with anchorages in keeping with the rest of the design, being all situated at strong points of the frame, and not, like most of contemporaneous design, welded (or brazed) in any suitable (?) position, to take the proprietary sidecar marketed by the firms. If a motor cycle frame will not stand up to being used with a rigid sidecar chassis (when properly fitted), then let the remedy be applied to the frame, either by moving the connection lugs to stronger points of the frame, or by strengthening the frame at the weak points.

Thanks are due to "Wharfedale" for opening up such an important subject for discussion.
J. WILLEY.

SUMMARY OF CORRESPONDENCE.

Referring to recent convictions of char-à-banc drivers for being drunk, Mr. R. Mawson suggests that it should be made compulsory for them to refrain from taking intoxicating drinks when on duty.

"Motor" (South Shields) suggests while the A.C.U. looks after motor cyclists' interests "and the people of the North," the A.A. "looks more after the South and the big pots' motor cars."

So bad are the roads between Llangollen and Bettws-y-Coed that it took a reader, Mr. J. Sugden, four hours to do forty miles. He warns others.

An unknown "Good Samaritan," who is believed to belong to Thornaby-on-Tees, is thanked by Mr. Reginald Summers for his timely help when the gear lever of the latter's New Hudson sidecar broke.

"S.J." (Hull) reports a very unsatisfactory state as existing in the East Riding of Yorkshire regarding the local authorities' views of present legal lighting requirements on solo motor cycles. Summed up, it would appear that they do not know where they stand.

Very satisfactory experiences on tour with an 8 h.p. New Imperial with double-seated sidecar were enjoyed by "AA 27882" (Leeds).

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"

The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Price net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

"MOTOR CYCLE REMINISCENCES."

By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Pricenet, 4/6. By post, 4/3.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Pricenet, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

CONVERTING ANGLE OF MAGNETO.

Can I convert a 180° magneto into one suitable for a 50° engine? —J.P.B.

The magneto is not suitable for the conversion you suggest.

FITTING A MAGNETO.

(1.) I wish to fit a magneto to a 2½ h.p. Minerva. When the engine revolves forward the cam revolves backward, and I want to know whether I need a clockwise or anti-clockwise magneto? (2.) What size sprockets do I require for this conversion?—S.R.

(1.) If you intend to use chain drive for the magneto, and propose fitting one of the chain wheels on the camshaft, you will require an anti-clockwise magneto. (2.) The two magneto sprockets should be of equal size—that is to say, the magneto should run at the same speed as the cam wheel, which runs at half engine speed.

LUBRICATING A GEAR BOX.

What oil should be used in a plain countershaft two-speed gear box fitted to a two-stroke Hobart with Villiers engine? At present I am using light body engine oil, but it seems too thin, as it leaks out of the bearings on to the chain, and gets thrown all over the machine. Also, is it necessary that the filler plug should be drilled right through, as after the machine has been running a short time the oil oozes out through this hole and runs all over the gear box?—E.F.L.

A thick body engine oil might be used, or one of the heavy semi-liquid greases specially made for gear box lubrication. Probably the filler cap of the gear box is drilled for air release; but it might not interfere with the running in any way if you stopped up the hole. It seems possible that you are injecting much more oil into the box than is necessary.

PRECISION TWO-STROKE OILING.

How far should a sump full of oil last for solo riding on the 3½ h.p. Precision two-stroke engine? I am only getting about twenty miles.—E.J.C.

It is claimed that 300 miles running should be obtained with one filling of oil, and in all probability the adjustment is incorrect. Write to the manufacturers of the engine for instructions on its care and management. After the engine is properly "run in," the oil-adjusting screw should be set at the figure 2.

FLAT TWIN TWO-STROKE.

I am building a flat twin two-stroke, with both connecting rods on one crank pin, and I am in difficulties with the balancing.

Will you please answer the following questions: Will I have to balance the crankshaft alone? Will the fact that both pistons move in the same direction upset the usual balance of a flat twin? If any portion of the reciprocating parts require balancing, can you give me the necessary directions?—H.T.

The balance of such an engine is arrived at in the same way as that of a single-cylinder engine, the figures for the bobweights being approximately equal to the rotating weights, plus .4 of the reciprocating weights. Such an engine, owing to the great mass of the reciprocating parts, will be extremely difficult to balance satisfactorily, and in all probability the vibration would be excessive. A horizontal twin engine is only well balanced without the use of additional balance weights when the pistons move in opposite directions (i.e., the crankshaft must be of the two-throw variety with cranks at an angle of 180°. We are not quite sure as to the type of two-stroke engine you propose to make; but we suppose you are aware that in the layout suggested there is no crank case compression?

POOR COMPRESSION

I have a 1909 3½ h.p. Triumph cycle (bought second-hand), which hardly gives one quarter the power it should normally develop.

On the lowest possible gear ratio of the movable pulley it will not climb any gradient steeper than 1 in 12. The cylinder has just been rebored and new piston and rings fitted; all the mechanism is apparently perfect; the magneto gives a splendid spark at all speeds; the carburettor is functioning properly (a No. 32 jet is in use); valve timing is correct, as the pinions are marked; and the valves have just been ground in. The rings appear to be a perfect fit in the cylinder, and no compression is leaking at the valve cap, guides, compression tap, or plug, but the compression appears very low. It is possible to start up by turning the engine over compression by a strong pull on the back wheel by hand. (1.) Can the engine be in proper tune if it is possible to turn the back wheel over the compression by hand without the use of the valve lifter? (2.) If the compression ratio is too low, what is the most practical way of raising it? (3.) In what way is it likely that the compression has been reduced? (4.) Is it possible that the fitting of different valve caps has effected such a great reduction? (5.) Is it likely that a shorter connecting rod has been fitted by a previous owner? (6.) Again, is it possible materially to increase compression by the fitting of special valve caps, compression tap, or have longer connecting rod?—H.S.

(1, 2, and 3.) It is possible that the new piston is not suited to your cylinder. The 1909 Triumph machine as made had a fairly high compression ratio, a dome topped piston being used. The later engines were fitted with flat topped pistons, and the latter do not necessarily suit the earlier engines. There is a difference between low compression and bad compression. Even with a low compression engine it should be difficult to pull the back wheel round by hand. (4, 5, and 6.) It is unlikely that you could make an improvement by fitting differently shaped valve caps. A slightly longer connecting rod might improve matters, assuming that everything else is in order; but we should advise you to take up the matter with the makers, stating the engine number and the type of piston which has just been fitted.

ENTERPRISING MUNICIPAL AUTHORITIES.

A fleet of B.S.A. machines used by the staff of the Redditch Gas Company.

BELT WEAR.

I have a 5.6 h.p. sidecar machine which has a variable pulley gear that I find very hard on belts. Even when most carefully driven, a rubber belt only lasts a few hundred miles. The last belt I used was a three-ply leather one which lasted about 1,500 miles. I am told that leather, especially leather link, belts are very hard on the pulleys; but I did not find the one I tried too bad in this respect, and do not see why a link belt should be worse. The belt cannot be more than 1in. wide to get the lowest gears, and the pulleys are new and in good order. What do you advise?—R.O.S.

The excessive belt wear on your machine is unusual, and we can only think that it is due to careless manipulation of the gear control. It certainly should not be necessary to use a leather belt on your machine. It will be advisable to get the makers' handbook, which no doubt will contain full instructions regarding the control of your machines. When changing gear either up or down move the control lever slowly, and on no account attempt to drop suddenly from high to low gear. All leather belts are harder on the pulleys than rubber, as they tend to pick up small fragments of grit which become embedded in the surface, and so grind away the metal of the pulley flanges. They give good service, however, if periodically scraped and dressed with oil. A good rubber and canvas belt properly fitted should run for about 3,000 miles before it need be scrapped.

DECARBONISATION NEEDED.

I have a new Levis motor cycle, and have done about 3,000 miles. The machine runs exceedingly well on the level, but it does not take me up hills in the same manner as previously, and it appears to be losing power. Can you suggest the reason for this? The machine is the same in every respect as when new, and no adjustments have been made.—T.V.

If the machine has run 3,000 miles without requiring any adjustments, we take it that not even the cylinder and piston have been decarbonised; and this will account for the falling off in power. You should remove the cylinder, taking care that the edge of the piston is not broken in the process by allowing it to fall on the connecting rod. We should strongly advise you to consult "Motor Cycles and How to Manage Them" on removing the cylinder and generally overhauling the engine. Having removed the cylinder, carefully scrape the inside of the head and the exhaust port, and remove all accumulation of carbon from the top of the piston and also from the underside of the piston head. Notice whether the top piston ring is free in its groove. If it is not, it must be loosened (and in all probability will be broken in the attempt, so that you should not try this operation unless you have a new one by you!) When reassembling the engine make a stiff brown paper washer for the joint between the cylinder and the crank case, and coat this with seccotine on both sides before fitting. Do not forget to cut an opening for the transfer port when you make the washer.

Important Dates.

Sat., Oct. 1st—Doncaster and District M.C.C. Open Speed Trials.
Wed., Oct. 5th, to Sun., Oct. 16th—Paris Show.
Sat., Oct. 8th—B.M.C.R.C. Championship Meeting, Brooklands.
Sat., Oct. 8th—The "Scott" Trial in Yorkshire.
Fri., Nov. 4th, to Sat., Nov. 12th—Automobile Exhibition, Olympia and White City. (See "The Autocar.")
Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.
Sat., Dec. 3rd to Tues., Dec. 13th—Brussels Show.
Fri., Jan. 27th, to Sat., Feb. 4th, 1922—Scottish Car and Motor Cycle Show.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"W.D." (Liverpool).—3 h.p. Ivy two-stroke sidecar outfit: General reliability, speed, power on hills, comfort of driver and passenger, consumption, and lubrication.

"J.G.P." (Richmond).—Binks carburetter on 6 h.p. A.J.S.: Miles per gallon, power, and slow running; also Best mechanical oil-pump.

"J.W." (Leicester).—Cleveland two-stroke: Chain, clutch and kick-starter, petrol and oil consumption, and reliability.

Lieut. J. H. G. (Belfast).—Cox-Atmos carburetter on $3\frac{3}{4}$ h.p. Scott sidecar: Best adjustment.

"J.D.S." (Aberystwyth).—Paragon patent folding sidecar: General experiences.

"R.N.L." (Horsted Keynes).—Wates electric conversion sets: Reliability and average duration of one charge of the accumulator.

"T.L." (Morpeth).—1921 water-cooled Morgan-M.A.G. or J.A.P., and 1921 G.N.: Running costs, general reliability, and speed.

Reliance Cup Trial Amendment.

In the list of awards of the Reliance Cup Trial, J. A. Newman was stated to have gained a gold medal on a Triumph. His mount actually was a $3\frac{1}{2}$ h.p. Sports Douglas, the only one in the trial.

Reason for a Retirement.

Since the car containing A. Graham Martin's personal belongings, and spares for his Zenith, failed to turn up before he was due to start in the recent London-Bala-Dunstable trial, he was compelled to retire from the event through a broken belt.

Dynamo Driving from the Rear Wheel.

The sole sale concessionnaires for the Wattalite dynamo lighting set, described recently in *The Motor Cycle*, are Holroyd Motors, 6, Warwick Street, Regent Street, London, W.1, to whom all enquiries should be addressed.

Found.

A tool kit picked up by a reader (Mr. W. Hutchinson) in the middle of August on the Charing-Maidstone road now reposes in the Bromley Police Station.

If the Ariel rider who dropped a roll containing maps or charts, near Sidcup, on Sunday, the 11th inst., will apply to Mr. E. K. Nye, 11, Champion Grove, Denmark Hill, London, S.E.5, he will have his property returned.

Although we are always glad to publish details of articles found by our readers, we regret we cannot give publicity to the many letters we receive regarding things lost on the road.

A TOURING TRIAL IN WHICH EVERY STARTER FINISHED.
J. L. Shaw (2 $\frac{1}{2}$ A.J.S.) and F. L. Bolderston (6 A.J.S. sidecar) in the check at Terne Bridge during the Birmingham M.C.C. run to Chepstow.

A THREE-SPEED GEAR FOR LIGHTWEIGHTS.

New Moss Gear Box tested in the T.T. and Six Days Trial's, now Available in Quantities.

IN such an apparently straightforward piece of mechanism as a proprietary three-speed gear box, it would appear that there could be little scope for invention or departure from conventional methods of design.

The *desiderata* of a good component three-speed gear are that it shall be well made, lasting, quiet in action, easy of operation, and adaptable to any machine; and the qualities of long life, quietness, and ease of control, are largely dependent upon design. Foolproofness and easy changing in a three-speed gear are principally sought by adopting the constant mesh principle; but when this is done, a double system of dog clutches, selectively engaged by some form of cam mechanism, is usually required, and the gear box becomes an expensive production. Some designers have overcome this trouble by having both mainshaft and layshaft middle gear pinions of the sliding variety, so that, although in constant mesh, they serve also as high and low gear dogs, middle ratios being obtained by interrupted splines or dogs on the shafts.

Constant Mesh Sliding Pinions.

The above-described construction, although working fairly well in practice, is apt to result in a design in which the sliding pinions, if internally dogged, are somewhat limited in their bearing areas; consequently they tend to become slack on their shafts, or require initial slack for free working.

Kick-starter details, mainshaft and quick-threaded gear-operating bar enclosed within the box.

This being so, the sliding pinions frequently run out of pitch, and are noisy in action, and the wear takes place on a weaker part of the tooth than that intended by the designer.

To improve upon existing practice has been the plan of the Moss Gear Co., Ltd., of Aston Cross, Birmingham. Replete with one of the finest gear-cutting plants in the country, this concern has decided to make a special appeal to the motor cycle trade in gear components, as it has already done successfully in the small car world, and the new Moss three-speed motor cycle gear is the result.

A single plate clutch with cork inserts is incorporated, together with the spring plunger kick-starter used in the Moss two-speed gears. Incorporated with the gear box, and enclosed in an extension of the end plate, is a relief action gear changing device, which allows the gear lever to be moved to any position, whether the dogs

Exterior view of the box and integral control mechanism.

are opposite and whether the engine is running or not. Also mounted on the gear box is a gate.

The construction is somewhat unusual. On the mainshaft is the sleeve carrying the final drive sprocket or pulley and the large gear pinion and high gear dog. This sleeve runs in a large ball bearing carried in a steel cap pressed into the gear box. On the six-splined portion of the shaft slides the middle pinion with dogs at each side, and on the right of the shaft runs the small pinion.

The layshaft, which also runs on ball bearings, has a small pinion rigidly splined on, meshing with the mainshaft large gear. On the right of the layshaft is a flange, to which is riveted a large pinion of drum-like formation, meshing with the mainshaft small loose pinion. This drum-like pinion has internal dogs at its outer edge with a recess behind them. The layshaft middle gear pinion slides freely, and has a long sleeve extension with peripheral dogs.

The two sliding middle gear pinions are moved together by an operating plate which drops into

grooves in each, the plate being moved endways by a quick thread and nut device.

High gear is obtained by sliding both middle pinions to the left, when the dogs upon that on the mainshaft engage with the large gear wheel thereon, and the shaft and sleeve run solid. Middle gear is given when the mainshaft dogs are disengaged, but when the sleeve dogs on the layshaft middle gear have engaged with the internal dogs in the layshaft drum pinion. For low gear the two wheels slide completely to the right, thus dogging the small mainshaft wheel, while the sleeve dogs of the layshaft middle wheel pass into the recess of the drum, and there run idly.

Advantages.

The advantages of this construction are that two sliding wheels, while constantly in mesh, are supported on uninterrupted bearings—that on the mainshaft being broached to a perfect fit on the splines, and that on the layshaft having a plain hole of about 1½ in. in length.

Throughout, the box, gears, and shafts are of nickel-chrome steel, heat-treated to 120 tons tensile; and the workmanship, as we have seen, is of the very highest order.

A quadrant and pinion operate the quick thread gear-operating spindle, and all damage to the gears is prevented by the safety relief device incorporated in the mechanism.

The only criticism we can make after a thorough examination of a batch of gears going through production is the bulky appearance due to the housing of the control parts in the end plate extension. The box, however, is light, and the chain and belt lines and bracket fixings are the same as all other standard makes of gear boxes.

Internally, there are no keys, all fixed wheels being either splined or riveted in position. The standard ratios are 5, 7.76, and 14.2 to 1.

Part sectional drawing, showing general layout of the shafts, pinions, bearings, and single cork inset clutch and operating mechanism. Alternative final drives (chain or belt) are depicted.

SPECIAL FEATURES

ANGLO-DUTCH TRIAL,
OVERSEAS COMMENTS.

CYCLE CARS UNDER TEST.
TRICK RIDING IN HANDCUFFS.

TIME TO LIGHT LAMPS

Sept. 29th	7.44 p.m.
Oct. 1st	7.39 "
" 3rd	6.34 "
" 5th	6.34 "

Number-plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

The M.C.C. Annual Dinner.

The fourteenth annual dinner of the Motor Cycling Club will be held at the Wharnccliffe Rooms, Great Central Hotel, on Thursday, December 1st.

Next Saturday's Big Speed Trials.

Although entries had not closed at the time of writing, the Doncaster open speed trials seem likely to attract a positive galaxy of talent among the speed men. The Motor Cycle Challenge Cup will be awarded for fastest time in the best represented class of the meeting, and there are several other valuable awards.

A 3½ h.p. o.h.v. Triumph for 1922.

The 500 c.c. overhead valve Triumph which has figured in the classic speed events this year will be marketed in 1922 as a three-speed fast roadster.

Legal Brakes.

Mr. Arnold Butler, J.P., at a Birmingham court last week decided that flywheel brakes on outside flywheel engines are legal; also that two brakes acting on the rear wheel belt rim are legal, provided they are actuated by separate pedals.

Miniature Sidecar Outfits.

Baby two-strokes propelling sidecars now compete on level terms with big twin outfits with success. Early in the year a small Velocette took a sidecar round the course of a difficult Midland trial. In the Scottish Six Days a Hawker sidecar climbed Applecross. In the A.C.U. Six Days an O.K. outfit climbed Lynton and Porlock, and now a sister machine has secured a gold medal in the Scottish Two Days. Congratulations to its driver, Neville Hall, for being the first on a miniature outfit to secure a premier award in a big event.

Kickham Recovering.

It may be remembered that E. Kickham, the well-known Douglas rider, had a severe accident in the Grand Prix de U.M.F. at Le Mans in July. We learn that he has progressed satisfactorily, and, in fact, much better than was anticipated at first. It will be about a fortnight before Kickham is able to leave Le Mans.

Triumph Prices for 1922.

The 1922 prices of Triumph motor cycles have now been decided. They come into force on October 1st, and include free delivery at any of the manufacturers' agents in this country. The prices are as follows: 4 h.p. chain-cum-belt, £105; sidecar, £145; 4 h.p. all chain drive, £115; sidecar, £155; 3½ h.p. o.h.v. fast roadster, three speed, all chain, £120; and 2½ h.p. lightweight, £65.

A.C.U. General Committee Meeting at Leicester.

The delegates to the General Committee meeting of the A.C.U., to be held at the Bell Hotel, Leicester, on Saturday next, are being entertained to dinner to-morrow evening (Friday) by the Leicester Motor and Loughborough Motor Cycle Clubs. Dinner will be served at 7.30, and all motor cyclists are heartily invited to be present. Tickets may be obtained from the East Midland Centre Secretary, Mr. K. S. Topping, 64, Frederick Street, Loughborough. At 9 p.m. a smoking concert will be held, when it is hoped a large number of Leicestershire motor cyclists will attend. An excellent musical programme has been arranged, and there is no charge for admission.

THE FRENCH
CYCLE CAR
GRAND PRIX.

One of the French-built Morgans on the famous Le Mans course. The race was won by Lombard on a Salmson four-wheeler. (Inset) E. B. Ware, an English competitor, who was much fancied to win on his neat racing Morgan.

Essex M.C. Annual Dinner.

The annual dinner of the Essex-Motor Club will be held at the Holborn Restaurant, London, W.C., on Saturday, January 7th, 1922.

Open Climb on Axe Edge.

An open hill-climb, which promises to be a very well-supported event, will be held on Axe Edge, Buxton, on Saturday, October 15th, by the Stockport and District M.C. The secretary is Mr. E. S. Abram, 226, Manchester Road, Heaton Chapel, Stockport.

Popularity of Trials.

During the past week-end there was a snuffit of competitions—each supported by a large entry. The Scarborough Speed Trials attracted over 200 entries, the M.C.C. Sporting Trial nearly 100, an inter-team trial among employees of Coventry factories nearly 100, the Levis Single-gear Trial over fifty—and there were about twenty other hill-climbs, team trials, reliability trials and gymkhanas, in addition to the annual Anglo-Dutch Trial.

SMALL CARS.

Motor cyclists interested in small cars should read "The Autocar," the parent journal of "The Motor Cycle."

Light, medium, and large cars are adequately covered in its pages. No artificial division of light cars from other types is attempted, or, indeed, is necessary, since the principles of design are identical and the interests of users, whether concerning questions of upkeep, taxation, roads, service or future development, are undivided and common to all.

Thus, "The Autocar"—the pioneer and the largest of all motor journals—forms the only complete record of the automobile movement, by embracing the interests of motorists in general.

Every Friday - - Price 4d.

A Sporting Big Twin.

A new British big twin sporting model is described in this issue.

1922 Models Under Test.

In various trials during last week-end we observed several experimental models which may be marketed in 1922. Among these were the M.A.G.-Brough Superior, the V twin two-stroke Stanger, a Barr and Stroud-engined Warne, and a twin Rover with the engine across the frame—a particularly neat machine.

Autumn Trials.

The open reliability trial organised by the Woolwich, Plumstead and District M.C. for the Matchless Cup will be held on Saturday of next week. The trials secretary is Mr. F. J. Ellis, 3, Nightingale Place, Woolwich, S.E.18. Another important autumn event is the M.C. and A.C. one day trial open to members of the Midland Centre. This will take place on October 15th. The organising secretary is Mr. F. J. Urry, Lionel Street, Birmingham, and entries must be received by Wednesday next.

SPORTING INTER-WORKS TRIAL.

Coventry Team Trial attracts Ninety-six Entries.

ALTHOUGH last Saturday's inter-works team trial was confined to the motor cycle clubs of Coventry's various factories, there were as many—if not more—genuine private-owner entrants among the ninety-six competitors as ever graced any event of that size. For several it was their first trial, but (although the severity of the route came as a surprise to some) we do not think it will be their last. The event was admirably organised by a committee of the Standard and Triumph Motor Cycle Clubs, and everybody enjoyed it thoroughly.

Three Watersplashes.

There are no hills of note within easy reach of Coventry, but a twenty-mile circuit, covered three times and starting not five miles from the heart of the city, provided quite a lot of rough going, which, with three perfectly fair watersplashes, ensured that too many teams did not finish with clean sheets. Each rider set his own speed (between 16 m.p.h. and 20 m.p.h.) for the first circuit, and marks

were deducted for deviations from schedule on the second and third times round.

Chief interest centred at the splashes, which came one after another in the neighbourhood of Temple Balsall, Knowle, and Hampton-in-Arden, the first being about five miles from the start (at Pickford Brook, near Allesley). It was approached by a right-hand hairpin, and quite 30% of the competitors blindly rushed it on their first circuit—and failed. One Rover rider would have gone down stream at speed if a fence had not barred his way. This time, however, there was no penalty for failure, and on the next two occasions, which were non-stop, there was less—sometimes involuntary—driving to the gallery.

J. Pountney (5-6 Rover sc.) broke his chain at the second crossing, the cause probably being a small stone thrown up from the bed of the stream. W. E. Fox (3½ Rudge) lost his non-stop in the water, as did J. Bell on a direct belt-drive 3½ h.p. Triumph. Each time round F. Kirby (2½ Connaught) came to a standstill, but he

did not seem to worry much, and carried on. Very fast crossings were made by A. Brinklow (4 Triumph sc.), L. Hathaway (4 Triumph), and F. W. Ivens (3½ Norton), but probably the cleverest bit of driving was accomplished by E. Merritt (4½ Humber), who got into difficulties at the deep end and wormed his way out at about ½ m.p.h. without moving his feet. After two clean circuits, T. Doyle (3½ Lea-Francis) stopped at his third attempt in a cloud of steam, a feature also of W. Wilday's (4 Triumph) failure.

High Water.

It was at this splash that some mysterious agency caused the water to rise a full three inches in half-an-hour. Fortunately, there was a lull in the stream of competitors when the flood was at its height, but one or two had very stormy passages.

The rises immediately following Nos. 1 and 3 splashes were, in several cases, too much for wet belts; but it was noticeable

AT THE START. Out of the thirty-two teams which competed only seven made non-stop runs.

Sporting Inter-works Trial!

that other drivers on identical machines had no trouble. Of course, some of the more wily sidecarists had instructed their passengers that a sprinkling of dry earth would help matters; others were more primitive still, and simply wiped the offending belts with a piece of rag. A few riders had tried various preparations to give "grip" to their belts.

Only six lost their non-stops in the second ford and four at the third. But, as we have already mentioned, had stops in the first circuit been penalised, there

would have been less need to have relied upon the timekeeper to find a winning team.

While the "wet section" of the route was the most interesting to the spectators, the portion north of the Coventry-Birmingham road was extremely rough and called for very careful driving. There were few failures here, although a case was reported of a rider retiring because he had "had enough, without going round twice more"!

Several well-known and experienced competition riders took part; they are

not mentioned individually, for, though they rode well and cautiously, they were never conspicuous.

Altogether, it was a most successful trial, providing a thoroughly sporting half-day's 'busman's holiday. The organisation was excellent.

The provisional results are as follow:

Winning Team: Team K, of the Humber Club (riders F. Yates, L. Crisp, and H. Crisp). Second: Team V, of the Triumph Club (G. H. Kirby, M. Powney, and G. Shemans). Seven complete teams finished out of thirty-two which entered. Individual prizes: 1, G. Ingham (Triumph); 2, W. F. Fox (3½ Rudge); 3, E. L. Roberts (4 Triumph).

A Lightweight Single Gear Trial.

Fifty-one Competitors in Sporting Trial organised by the Levis Sports Club.

IN previous years the Levis annual single gear trial has been confined to Levis riders, but this year the popular event was open to riders of all makes of machines. Fifty-one competitors started from the Levis works at Stechford, Birmingham, and those who had change-speed gears had their gear levers locked.

The course was about 100 miles, and at no time were the riders more than twenty-five miles from Birmingham.

The first obstacle was a watersplash. About 50% of the field negotiated this "clean," the other 50% had to foot-slog to help their slipping belts. This watersplash was more difficult on the return journey, as in the reverse direction the crossing was followed by a sharp ascent. As a matter of fact, coming home, only six completed this section without taking their feet off the rests. One man fell into the water, and at the finish was heard anxiously enquiring for the secretary.

Artificial Obstacles.

The "Colonial Section" was the next item. The officials thoughtfully placed some branches in the centre of the track to ensure that the riders should tackle the very worst place—thick grass growing in a minor bog. Only seventeen accomplished this section in a manner to satisfy the checkers so far as to be marked down as "clean."

The *pièce de résistance* was Gravel Pit Hill, the surface of which is composed of loose stones, and is approached by a sharp corner, which is also very loose. Only five of the competitors climbed this to the satisfaction of the judges. Without question the best ascent was made by S. Jones on a Levis, the last man of those still competing. W. V. Pickering

(Triumph) skidded completely round, and charged the bank. N. D. Pickering, a youth of about fifteen, made a very skilful climb. His Triumph was always on the verge of stopping, but, by clever driving, he jockeyed it safely to the top.

A New Method of Deducting Marks.

The competitors had to average 20 m.p.h., and marks were added and deducted for the various features of the

trial. The observed hills were divided into three sections, so that the higher the competitor ascended before paddling the fewer marks he lost. This is quite a good idea, and is worthy of consideration on the part of other trials organisers.

At the time of going to press the winner of the premier prize was not known, but it was believed that the award would go to G. S. Davison (Levis), W. S. Hawcutt (Levis), or S. Jones (Levis).

One of the watersplashes included in the Levis Trial. E. C. Myhill (2½ Levis) passing through the comparatively shallow ford at Shirley.

SPEED TRIAL AT LUTON HOO.

TWENTY-TWO classes (sixteen for motor cycles and six for sidecars) were included in the programme of the Luton and South Beds. A.C. annual speed trials last Saturday.

In the first two events H. Ruyre (Ruyre-Newson) and G. Dunham (Velocette) performed conspicuously, while A. E. Marshall, riding a Douglas and afterwards an A.B.C., impressed one, not only with the speed of his two mounts, but also with his neat driving.

Three Duzmos were competing, but were not in their best form, particularly the

twin, which suffered severely from misfiring. F. Burley (Sports Sunbeam) rode very consistently, and handled his machine well.

In the 1,000 c.c. class E. Baragwanath appeared fast, and though his engine spluttered badly half way down the course, he gained first place in the ninth event. In the same event Barker (Zenith) broke his belt whilst at speed and wobbled badly. After Event No. 10, in which G. Read (8 Enfield), showed up particularly well, there was an interval for tea, which was served in a marquee. Then followed

the sidecar class, in which O. De Lissa (Motosacoche) and H. Saddington (James) figured conspicuously.

The event this year did not attract the large number of spectators usual for an event at Luton Hoo. The large number of events last week-end may have had something to do with this.

The fastest time of the day was made by Read (Enfield), who covered the flying half kilometre in 16½s.—68.2 m.p.h.—a very creditable performance. This is the first time the Enfield with Vickers engine has competed in a speed trial.

ENGLAND & HOLLAND

On main roads in the Cotswolds. J. A. Newman (6 o.h.v. Douglas sidecar), H. Boynton (7 James sidecar), and G. J. Hamer (7-9 Indian sidecar), followed by other riders in the competition. The touring Rolls-Royce was *not* competing.

British Team proves Successful in the Fourth International Team Trial between the Two Countries. An Interesting Week-end for Dutch Riders.

First held in Holland in 1912, the Anglo-Dutch Team Trial is quite unique. It has no parallel in any other event in the motor cycle world. A team of 18 Dutch riders, chosen by their fellow motor cyclists, compete in a reliability trial against a similar team of riders representing Great Britain. In the first event, held in Holland in 1912, the Dutch team won. 1913 saw a British victory in this country. The 1914 trial was abandoned owing to the outbreak of the war, and in the 1920 test in Holland, the Dutch riders were the victors and so secured the original trophy. This year's contest is the first of the second series and has been won by the British team.

(and track) portion of which took place on Monday over an indirect route from Worcester to Brooklands.

Remembering the welcome accorded to the British team last year in Holland (when the Dutch team won), a round of

A few of the visitors from Holland at Leamington Spa on the day preceding the event.

England v. Holland—

festivities was arranged for the visitors, extending from their arrival on Saturday until their departure on Tuesday afternoon. Breakfast as guests of the Essex M.C. was followed by an escorted ride to Leamington, and, the Midland Centre, A.C.U., having taken over the party at Towcester, dinner that night at the Town Hall, Leamington, was provided, right royally, by the latter body. So was luncheon at the Shakespeare Hotel, Stratford-on-Avon, where, on Sunday, the visitors had every opportunity of inspecting one of the show places of England.

In the afternoon a move was made to Worcester, the Western Centre taking official charge of the Dutch team at Alcester, amid the usual scenes of much enthusiasm. That night a dinner was held at the Guildhall, Worcester, when the competitors of both countries were welcomed by the Earl Beauchamp and the Mayor of Worcester.

The trite saying that it would be invidious to mention names is very applic-

Between Stratton Station and Cricklade during the morning's run. J. N. Nieuwenhuys (6 Simplex), followed by W. M. Zelle on a sister machine. R. Charlesworth (8 Zenith sidecar) and H. Fels (7-9 Harley-Davidson) in the rear.

It was noticeable that the Dutch machines, most of which were of British or American manufacture, were in few cases 1921 models; some actually were pre-war, while we should imagine that they averaged about three years road service to their credit.

At a late hour after the Guildhall banquet the visitors held a fully attended council of war, when the route card and final regulations were discussed and analysed down to the minutest detail.

Thus each competitor came to the starting point, the Hopmarket Hotel yard, at eight o'clock on Monday morning, with the regulations as thoroughly at his finger-tips as had the officials themselves, and possibly a shade more completely than some of his English contemporaries.

An Easy Starting Test.

Thirty seconds were allowed in which to start up engines from cold, but this proved a generous allowance, and only O. Hayes (2½ A.J.S.) lost marks on this score; a night in a damp garage had caused a sticky contact breaker. He quickly rectified this and carried on; but he was not the only one to get into difficulties early. Nos. 1 and 2, Jac Brunt (2½ Douglas) and D. A. Atkin (2½ Hobart), were misdirected before they had run clear of Worcester, a heavy morning mist nullifying the very complete blue trail of the route markers. They, too, retrieved themselves in time.

For the first ten miles it was a main road run, then a by-road past Malvern Link Station, more good or fair going through Welland to Holly Bush cross roads, and then, for the first time, a narrow track reminiscent of the usual English reliability trial. This led to the first serious hill, a stony rise, about two hundred yards long, with a maximum grade of 1 in 5, and approached by a sharp left-hand corner.

None of the English riders turned a hair; but quite a few of the rival team lost their non-stops. J. R. Donker (2½ Royal Ruby) came to a stand-still about half-way up, and seemed surprised, and E. Ekker (4 Bianchi), apparently taking his cue from the man in front, did like-

wise. Both paddled on to the summit, amid a tuneful chorus of "konks." There was a momentary lull, and then three more, C. J. H. Wolff (2½ Royal Ruby), H. Bieze (2½ Royal Ruby), and—tell it not to Mr. Norton!—M. van den Jagt (3½ Norton), simultaneously decided that fifty yards climbing was enough at a time.

One of the trio should be able to claim a baulk—which one, it would be difficult to say, for all three had much trouble in

H. Fels (7-9 Harley-Davidson sc.), captain of the Dutch private owners, ascending Birdlip. Observe the sidecar on the right hand side of the machine.

An American sidecar on an American machine fitted American fashion, but with an Easting screen. W. Van Zyl (7-9 Harley-Davidson sc.) near Cricklade.

able in reviewing the festivities in connection with the event; everybody worked with a will to give the visitors a good time, and we may safely affirm that, they succeeded. In return, the Dutchmen displayed extraordinary keenness.

Well Matured Machines.

On Sunday evening, when the competitors were rigging up their official number-plates (incidentally, with considerable difficulty) and filling tanks preparatory to the actual trial on the morrow, many of the Dutch team were observed taking down and cleaning out carburetters, testing tyre valves, and effecting all sorts of back-aching precautionary measures. Excepting, perhaps, G. Nott, who changed a tyre on his Matchless outfit, the English team "stood easy."

Two of the English sidecars on Calais Hill, near Cirencester. S. Wright (4½ Humber) and W. Pratt (8 Matchless).

getting going again on the grade, meanwhile baulking H. R. Davies. Indeed, the majority of the Dutch competitors suffered from a lack of previous acquaintance of single-figure gradients, and, therefore, had no true idea of the capabilities of their machines. The Simplex riders were noteworthy exceptions, their machines providing quite the surprise of the trial.

A few miles further on, Wolff was noticed repairing his front tyre, a feat which he accomplished in quick time.

After Gloucester came Birdlip, the test hill of the day, lined with more observers than is usually considered necessary for a purely English trial.

Only W. P. Moffat (3½ Douglas) of the British team failed to make an easy, clean ascent; and he tried to get up on one cylinder, having broken a valve spring. His attempt was unsuccessful,

and he lost a valuable hour rectifying matters.

None of the visitors' lightweights distinguished themselves, excepting V. Fonck's 2½ h.p. Cedus; J. R. Donker and C. J. H. Wolff pushed valiantly—the latter raising such a heavy smoke screen that some of the more successful had great difficulty in passing with safety. The Bianchi "konked" painfully prior to giving up the ghost, but no more than Steensma's 4 h.p. Blackburne. The latter's effort was typical of many: first he almost stopped on top gear, then he very slowly went a little further on second, and again it was touch and go, and, finally, he engaged low—and stopped. T. Kersten (4 Harley-Davidson) varied the procedure; he missed his first gear change, ran back, fell, pulled his machine upright across the road, and then fell over on his other side.

M. van den Jagt (3½ Norton), J. M. Boom (5 Simplex), P. Nieman (5 Simplex), J. F. M. Smits (7-9 Harley-Davidson), and W. M. Zelle (6 Simplex) were amongst the best of the visiting soloists; and Nieuwenhuys, on the forth Simplex, had ample power, but hung on to top too long.

If the secret check was at the top of Birdlip—no one saw it, but so it was rumoured—L. Sealey (3½ B.S.A.) must have been caught well ahead of schedule. He made a good climb, but with Wellensiek's B.S.A. it was touch and go until he changed down! J. W. ten Dam, on a black 7-9 h.p. Harley, was the only big twin soloist to fail, and he got well up before stopping.

Just to show that Birdlip is a severe hill, E. B. Ware's Matchless sidecar knocked quite appreciably before second gear was brought into action; and then, to confirm it, J. A. Hanse, on an old 6 h.p. Enfield sidecar, failed in a variety of ways to make a clean climb. His passenger had quite a strenuous time pushing the heavy outfit up. While this was going on, Sam Wright (4½ Humber sc.) passed at speed with a look somewhat akin to amazement on his face.

G. J. Hamer (7-9 Indian sc.), C. Witteveen (7 James sc.), and W. van Zyll (7-9 Harley-Davidson sc.) were all good, but L. J. Z. Veekeens (5-6 James sc.) spent at least an hour on the lower reaches of the hill.

The First Control.

Cirencester was the first control, and a commendably large proportion of both teams were dead on time.

In the next forty odd miles, via Cricklade, Baydon, and Wickham, to the lunch stop at Newbury, there was more fine scenery than there were single-figure gradients. Notwithstanding this, some of the visiting 250 c.c. and 350 c.c. machines had to be "slogged."

Only two were missing at the half-way halt—Veekeens, whom we have already mentioned, and who turned up amid general rejoicings about an hour later, and Bieze, who had apparently lost his way.

(Left) Near Wickham. W. Pratt (8 Matchless sidecar), captain of the English trade team. (Right) J. v. d. Werden (7-9 Indian), followed by Geo. Nott (8 Matchless sidecar), at Stratton Station.

Dutch solo riders on Birdlip. J. M. Boom (5 Simplex), who made one of the best performances in the visiting team on this well known main road hill is on the right, and has just passed H. Bieze (2½ Royal Ruby), while in the rear are C. L. Sprosen (2½ Connaught) and another of the Dutch team—who found the hill too much for his mount.

It was now obvious that not all who had made clean ascents of the test hill had retained clean sheets. For example, F. J. Visscher's Indian sidecar was now largely held by wire, while the same rider had had trouble with his engine sprocket.

The luncheon arrangements at Newbury were very poor, and must have created a poor impression upon our visitors, which is to be regretted by all who know how well the British team was treated in this respect last year.

After lunch the trial continued over good roads through pretty and typically English scenery. On the whole, the worst was over, but it was not too easy for the competitors, as a few sandy lanes before reaching Brooklands rendered going uncomfortable for the solo riders.

It is curious to relate that, although the course was a secret one, a number of motor cyclists were observed at various points.

Unfortunately, one of the Dutch team—H. Fels (7-9 Harley-Davidson sc.), the private owners' captain—collided with the Indian lorry on arrival at Brooklands and suffered a dislocated collar-bone. His place was taken by one of the reserves.

On arrival at Brooklands, and after filling up with petrol, the competitors proceeded to the fork for the start of the twelve laps (36.2 miles) at speed. The speeds required by the regulations were as follows: 275 c.c. solo and 600 c.c. sidecars, 28 m.p.h.; 350 c.c. and 500 c.c. solo and 1,000 c.c. sidecars, 35 m.p.h.; 1,000 c.c. solo, 40 m.p.h.

On Brooklands Track.

As was to be expected, the track test found weak spots in the competitors' machines. J. R. Donker (2½ Royal Ruby) and H. ten Velde (6 Bat) were soon in trouble, while W. B. Gibb (2½ Douglas) was running on one cylinder and with his front stand down. J. A. Hanse's 6 h.p. Royal Enfield sidecar was not running at all well until his sixth lap.

The visiting sidecarists created some interest by riding their machines in a bunch and in close order—not a very safe proceeding.

Donker (Royal Ruby) stopped on his seventh lap for oil, and on the ninth lap

A. G. Wall (Cedos) made a halt for the same reason, but found that he could not obtain any fuel. G. Hoogeveen (7-9 Harley-Davidson sc.) ran round the track holding on his filler cap, while W. Pratt (8 Matchless sc.) punctured, and F. A. Hardy (3½ Zenith-Bradshaw), who had run for several miles on one cylinder, had to change a plug before the speed test. J. Whalley (3½ Sunbeam) ran into the paddock during the speed test, but later reappeared; nevertheless, he succeeded in making fastest time, his average speed working out at 48 m.p.h.

Nott's Matchless sidecar averaged 46 m.p.h., while Geoffrey Smith (3½ Sunbeam) was third at 45.68 m.p.h. Excepting the visiting lightweights, the majority of the speeds were over 40 m.p.h.

A Victory for This Country.

After Brooklands, the competitors journeyed to Thames Ditton for the dinner arranged by the A.C.U. and the entertainment provided by the Surbiton M.C.C. at the Vaudeville Club. Here it was announced provisionally that the

British team had won with a loss of fifty-two marks as against 256 marks lost by the Dutch team.

Thus the home team again has won the event, and the second Holland-England Cup, presented last year by Mr. A. Citroën, will be in England for the next twelve months. H. Fels, the captain of the Dutch private owners, who met with an accident after having made a non-stop run, will be awarded a gold medal.

At the time of going to press the winners of the special trophies had not been decided.

THE COMPETING TEAMS.

Holland.

CLASS 1 TEAM—Jac. Brunt (2½ Douglas), J. R. Donker (2½ Royal Ruby), E. Ekker, jun. (4 Bianchi), A. Steensma (4 Blackburne), H. Bieze (2½ Royal Ruby), and C. J. H. Wolff (2½ Royal Ruby). Reserves: M. v/d Jagt (3½ Norton) and V. Fonck, jun. (2½ Cedros).

CLASS 2 TEAM—J. M. Boom, jun. (5 Simplex), J. W. ten Dam (7-9 Harley-Davidson), P. Nieman (5 Simplex), J. F. M. Smits (7-9 Harley-Davidson), W. H. Wellensiek (4½ B.S.A.), and H. ten Velde (6 Bat). Reserves: J. H. Nieuwehuys (6 Simplex), W. M. Zelle (6 Simplex), and T. Kersten (7-9 Harley-Davidson).

CLASS 3 TEAM—H. Fels (7-9 Harley-Davidson sc.), G. J. Hamer (7-9 Indian sc.), G. Hoogeveen (7-9 Harley-Davidson sc.), F. J. Visscher (7-9 Indian sc.), C. Witteveen (7 James sc.), and W. van Zyll (7-9 Harley-Davidson sc.). Reserves: J. A. F. Bolland (7-9 Harley-Davidson sc.), J. A. Hanse (6 Royal Enfield sc.), T. T. Gude (7-9 Harley-Davidson sc.), and L. J. Z. Veekens (5-6 James sc.).

Captain, private owners: H. Fels.
Captain, trade riders: C. Witteveen.

England.

CLASS 1 TEAM—D. A. Atkin (2½ Hobart), B. Kershaw (2½ New Imperial), O. Hayes (2½ A.J.S.), K. Don (2½ A.J.S.), W. B. Gibb (2½ Douglas), and H. E. Davies (2½ A.J.S.). Reserves: A. G. Wall (2½ Cedros) and C. L. Sprosen (2½ Connaught).

CLASS 2 TEAM—F. Dover (4 Triumph), F. A. Hardy (3½ Zenith-Bradshaw), G. Smith (3½ Sunbeam), W. P. Moffat (3½ Douglas), L. Newey (3½ Ariel), and L. Sealey (3½ B.S.A.). Reserves: R. A. Green (3½ Norton) and J. Whalley (3½ Sunbeam).

CLASS 3 TEAM—R. Charlesworth (8 Zenith sc.), J. A. Newman (6 Douglas sc.), G. Nott (8 Matchless sc.), B. Boynton (7 James sc.), W. Pratt (8 Matchless sc.), and E. B. Ware (8 Matchless sc.). Reserves: C. Crowhaite (3½ Duzmo sc.), S. Wright (4½ Humber sc.), F. J. Ellis (8 Matchless sc.), and W. A. Fell-Smith (8 Brough Superior sc.).

Captain, private owners: Geoffrey Smith.
Captain, trade riders: W. Pratt.

Big twin sidecars of America and England ascending Calais Hill. On the left is J. A. F. Bolland (7-9 Harley-Davidson), with his sidecar on the right, and W. A. Fell-Smith (8 Brough-Superior).

THE M.C.C. SPORTING TRIAL.

New Models in Well-organised Event for Solo Riders.

A GOOD entry of eighty-four riders and fine but dull weather favoured the M.C.C. 114 miles trial for motor bicycles. It was, as the organisers announced it would be, a sporting trial over a sporting course. The competitors were bound by few regulations, and save that each section had to be covered non-stop, and the men had to keep to schedule, they had little to worry them.

The course was practically the same as that used for the Arbuthnot Trophy, and consisted of winding roads and such well-known hills as Succombes, High Lane, Polesteple, Cudham, Rookhill-on-Starvecrow, and Chalkpit. On this occasion, the start, luncheon stop, and finish were at the Railway Hotel, Caterham.

Early Casualties.

Succombes Hill was encountered within four minutes of the start, and accounted for several failures at this early stage. One of the best ascents was made by F. Spikins (5 A.B.C.).

The next hill of interest was Sunningdale Avenue, which runs into the Westerham Road by Newbiggin Aerodrome, and within a few yards of the summit of Saltbox or Crown Ash, as it is more correctly called. It is approached by a lane, where a few competitors went wrong. Here F. W. Applebee (24 Levis) missed his way, and started climbing some steps. He claims to have made a clean ascent, but his prowess was ill-rewarded as he had not only left the course, but a series of inner tube troubles

Two Coulson riders. L. Nicholson and C. F. Alcock on Succombes Hill, which the competitors encountered in the first five minutes of the trial.

proved his undoing. So far as gradient and difficulty in climbing are concerned, the substitute for Crown Ash proved to be rather poor, but its surface was exceedingly rough and knobbly, and in wet weather it would have caused some trouble. As it was, practically everyone got up. Next to Succombes, Rook Hill was the worst on the course, and being loose, rough, and steep, it accounted for a large number of failures in the morning. Particularly good ascents were made by Spikins (A.B.C.) and R. B. Clark (Coulson-B.).

Near Caterham the competitors had to take a very awkward hairpin bend before reaching the finishing point.

New Models under Test.

At the luncheon interval we noticed that G. Brough was riding a new model Brough Superior, with a 750 c.c. M.A.G. engine, 72x90 mm., which is to be known as the Mark II. Another new machine was Warne's mount, which was fitted with the new Barr and Stroud sleeve valve engine. This is the first appearance of this engine in competition, and it has made a good start, as Warne qualified for a gold medal, while yet another new and successful competitor was McCarthy's 5 h.p. V twin two-stroke Stranger. The marking of the course was excellent, and competitors had little excuse for losing their way.

The morning's run accounted for many retirements, as only forty-four competitors faced the starter on the second round. Failures were, however, fewer in the

The M.C.C. Sporting Trial took the competitors through picturesque but tortuous lanes. The debut in competition of the V twin two-stroke Stranger. S. A. McCarthy is the rider, and he is seen on Rook Hill—the most difficult hill in the trial.

The M.C.C. Sporting Trial.—

afternoon, and only two stops were recorded on Rook Hill.

W. H. Bashall (Martinsyde) retired through tyre trouble, while R. B. Clark (Coulson), who got through, cannoned into *The Motor Cycle* photographer. Neither was seriously hurt.

The following competitors claim to have qualified for a gold medal:

C. T. Slowman (3½ Sunbeam), C. Wilson (4¼ Quadrant), G. Packman (8 Matchless), B. H. Brayne (4 Blackburne), L. A. Welch (4¼ B.S.A.), D. H. Davidson (4 Indian Scout), P. Cunningham (3¼ P. and M.), P. Street (3¼ Sunbeam), R. Pugh (4 Triumph), A. C. Rhodes (4 Triumph), V. Belfield (A.B.C.), L. Nicholson (Coulson-B.), N. C. Dear (3½ Sunbeam), E. Hillary (3¼ Rover), J. McBurnie (7 Indian), V. Olsson (3¼ Sunbeam).

T. Francis (4 Triumph), F. Begley (Indian Scout), S. J. Marks (4 Triumph), S. Dunford (2¼ Verus), M. O'Reilly (5 N.U.T.), F. R. C. Spinks (3 A.B.C.), O. W. Jones (7 Harley-Davidson), C. Bourlet (3¼ Ariel), S. A. McCarthy (5 Stanger), W. C. Hemy (2¼ A.J.S.), G. M. Townsend (3¼ P. and M.)—he rode 50 miles in the afternoon on the rim—H. G. Bell (7 F.N.), M. A. Newman (5-6 Raleigh), R. B. Clark (2¼ Conlson-B.), H. F. Edwards (4¼ B.S.A.), S. Warne (2¼ Warne's), L. P. Driscoll (3¼ Norton), J. A. Hout and T. J. Ross (3¼ Scotts), and F. A. Longman (3¼ Ariel).

Speed Trials on the Scarborough Promenade.

A Successful Motor Cycle Event concludes Carnival Week at Popular Northern Resort.

GLORIOUS weather, splendid sport, a record entry, and nearly perfect organisation, helped to make the concluding event of Scarborough's Carnival Week a huge success.

The gardens rising from the Albert Drive, where the trials were held, made an ideal grandstand, from which thousands witnessed the trials in comfort and safety. Well marshalled and policed, the whole event went off without the slightest accident.

Chief interest centred round F. W. Dixon (Harley-Davidson), R. J. Cawthorne (Norton), and E. Searle (Sheffield-Henderson), who put up some splendid times in the face of a head wind. But the "dark horse" was E. Wilkinson, of Malton, who had secured the 2¼ h.p. A.J.S. with which H. R. Davies won the Senior T.T. His speed only just fell short of 60 m.p.h. from a standing start, which was a splendid performance for an amateur who had only received the machine the day before.

F. W. Dixon (Harley-Davidson), of course, beat him, and secured the honour of fastest time of the day 65.9 m.p.h. R. T. Cawthorne (Norton) also did splendidly.

It will be seen from the results given below that the awards were, as usual, secured by a few riders with exceptionally fast machines. The little New Imperials secured two firsts, three seconds, and two thirds in three classes, while Sunbeams accounted for one second and three

F. W. Dixon (7-9 Harley-Davidson sidcar), who made the fastest time of the day. He also won the cup presented by Scarborough motor traders.

thirds; the A.J.S. five firsts, one second, and one third; Nortons four firsts, seven seconds, and one third; Sheffield-Henderson four seconds and two thirds; Harley-Davidson two firsts (including fastest time of the day) and one third; Morgans took two firsts. In addition to the motor cycle events, there were several classes for cars, which, however, failed

to equal the speeds of the motor cycles. Results:

250 c.c. SOLO (Amateurs).—1, G. Bower (2¼ New Imperial); 2, H. Thomas (2¼ New Imperial); 3, W. Marriott (2¼ Velocette).
250 c.c. SOLO (Open).—1, G. Bower (2¼ New Imperial); 2, R. Wood (2¼ New Imperial); 3, H. Thomas (2¼ New Imperial).
350 c.c. SOLO (Amateur).—1, E. Wilkinson (2¼ A.J.S.); 2, G. Bower (2¼ New Imperial); 3, J. T. Jobborn (2¼ Sunbeam).
350 c.c. SOLO (General).—1, E. Wilkinson (2¼ A.J.S.); 2, J. T. Jobborn (2¼ Sunbeam); 3, G. Bower (2¼ New Imperial).
560 c.c. SOLO (Amateur).—1, E. Wilkinson (2¼ A.J.S.); 2, G. Bower (3¼ Norton); 3, A. I. Drabble (3¼ Norton).
560 c.c. SOLO (General).—1, R. T. Cawthorne (3¼ Norton); 2, E. Searle (3¼ Sheffield-Henderson); 3, E. Wilkinson (2¼ A.J.S.).
750 c.c. SOLO (Amateur).—1, E. Wilkinson (2¼ A.J.S.); 2, G. Bower (3¼ Norton); 3, W. Wilkinson (3¼ Sunbeam).
750 c.c. SOLO (General).—1, R. T. Cawthorne (3¼ Norton); 2, E. Searle (3¼ Sheffield-Henderson); 3, G. Bower (3¼ Norton).
UNLIMITED SOLO (Amateur).—1, E. Wilkinson (2¼ A.J.S.); 2, G. Bower (3¼ Norton); 3, W. Wilkinson (3¼ Sunbeam).
UNLIMITED SOLO (General).—1, F. W. Dixon (7-9 Harley-Davidson); 2, R. T. Cawthorne (3¼ Norton); 3, E. Searle (3¼ Sheffield-Henderson).
600 c.c. SIDECARS (General).—1, R. T. Cawthorne (3¼ Norton); 2, E. Searle (3¼ Sheffield-Henderson); 3, C. P. Wood (3¼ Scott).
750 c.c. SIDECARS (Amateur).—1, J. H. Johnson (Rudge); 2, L. Padley (4 Norton).
750 c.c. SIDECARS (General).—1, R. T. Cawthorne (3¼ Norton); 2, E. Searle (3¼ Sheffield-Henderson); 3, C. P. Wood (3¼ Scott).
UNLIMITED SIDECARS (Amateur).—1, O. N. Sadler (7-9 Indian); 2, L. Padley (4 Norton); 3, G. E. Carnall (7-9 Harley-Davidson).
UNLIMITED SIDECARS (General).—1, F. W. Dixon (7-9 Harley-Davidson); 2, R. T. Cawthorne (3¼ Norton); 3, E. Searle (3¼ Sheffield-Henderson).
CYCLE CARS (Amateur).—1, R. F. Prichard (Morgan); 2, J. Moorhouse (Whizz-Bang); 3, R. E. H. Hutton (G.N.).
CYCLE CARS (General).—1, R. F. Prichard (Morgan); 2, T. Moore (G.N.); 3, R. E. H. Hutton (G.N.).

Riding the identical 2¼ A.J.S. that won the Senior T.T., E. Wilkinson made some fine performances, twice covering the half mile in 30½ secs. = 59.21 m.p.h. He won five firsts, two seconds, and the Webster trophy.

MOTOR CYCLE CLOTHING OF DISTINCTION

"TREWSO."

RITCHIE PATENT SPLIT OVERALLS

In two styles—"TREWSO" and "TAB." Patent No. 10677.

Specially designed to meet the requirements of the business man, doctors, and all those wanting a quick on and off suit without soiling hands or clothes no matter how dirty the weather, and give absolute protection.

"TREWSO" style are fastened with two long springs and tab at knee.

"TAB" style are fastened with four patent undamageable press studs.

The first and only Patent Motor Cycle Split Overalls on the market. Our Customers say, "The best in the world." Our opponents say, "Beautifully finished goods." "Ixion," in his "Occasional Comments" in "The Motor Cycle," says, "The best of its kind, and I know of nothing to beat it."

THE IMPERVIOUS WATERPROOF CLOTHING

is guaranteed to keep you dry. All proofings guaranteed for two years against decomposition.

Our clothing was the only clothing that kept the riders dry in the terrible wet weather during the whole 200 Miles Trials at Copenhagen, in 1914, when clothing was included.

See your Dealer and inspect these goods before buying anything else. The best goods are always the cheapest.

Some of the principal firms handling these goods are: All Wholesale Drapery Houses in Glasgow: J. Robertson, Accessories Factor, Glasgow; Fowlers (Aberdeen) Ltd., Aberdeen; A. Cheyne, Accessories Factor, Aberdeen; Henry A. Murton, Ltd., Newcastle; East London Rubber Co., Sheffield; Rainwear Co., Ltd., Manchester and Branches; Lewis's, Ltd., Liverpool; London Rubber Co., and Branches; The Ocean Waterproof Co., London; Messrs. Dunhills and Branches; The Scottish Waterproof Co., Ltd., Edinburgh.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 12 words 3/—, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable **& Co.** to **ILIFFE & SONS Ltd.**, and crossed. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box one, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our deposit system. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1/10. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the notice as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

ALEXANDER'S STOCKTAKING SALE HUGE REDUCTIONS

THIS WEEK WE PUBLISH
ONE OF THE MANY LETTERS
WE HAVE BEEN RECEIVING
FROM SATISFIED CLIENTS
WHO HAVE AVAILED THEM-
SELVES OF THIS OCCASION.

17th September, 1921.

Dear Sirs,

I have to thank you for the prompt attention and courteous treatment I have received from you in my recent dealings. I received the machine this morning and was very agreeably surprised with it.

You have recently advertised bargains, and I must say my machine is wonderful value indeed. In future, I will do everything in my power to recommend your firm to my friends.

I am,

Yours faithfully,

Sgd. (C.B.G.)

PHILIPSON'S

PATENT AUTOMATIC GOVERNOR

PULLEY

AND GEAR COMBINED.

A Philipson offered FREE

There are many clever experts in the Motoring World, but it is questionable if ONE can give an accurate description of WHY and HOW the PHILIPSON PULLEY works, and how it has been so successful.

WE OFFER ONE OF OUR LATEST PULLEYS FREE for the best answer given, and the result will be published in "The Motor Cycle" dated October 20th.

Answers must be received on or before TUESDAY, OCT. 4.

We cannot entertain any correspondence in connection with this competition, and our decision as regards the best answer is final, and the acceptance of this rule is an expressed condition of entry.

The Lightest, Speediest, and Simplest Gear on the market for direct belt-driven 2-stroke and 4-stroke engines.

IMMEDIATE DELIVERY.

Send for Illustrated Booklet.

No gear box friction.

No grinding noises.

No wheels or pinions to chew up.

What is your make? Write us.

REDUCED PRICE £7 7 0 Carriage Paid.

SPARKBROOK, nearly new, countershaft model, all on, tax paid, £36, or exchange for T.T. Triumph, Rudge, or similar, about 1914, or later.—Skelton, 11, Havana Rd., Wimbledon Park, London, S.W.19. [X9655]

EXCHANGE.

EXCHANGE 4h.p. New Hudson combination, 3-speed, K.S., countershaft belt drive, overhauled, painted, excellent tyres, for ex-army 4-cyl. fighting plant, or 2½h.p. Douglas.—Box 6,544, c/o *The Motor Cycle*. [1664]

ADVERTISER will exchange for 1920-21 motor cycle and cash, 1912 7½p. Swift 2-seater, exceptionally smart, and mechanism guaranteed, very fully equipped; Middlesex.—Box 6,568, c/o *The Motor Cycle*. [2183]

1919 Sunbeam 8h.p. Combination, Lucas dynamo set, detachable wheels and spare, guaranteed in sound order, for 2½h.p. Douglas or lightweight and cash, or sell; £155.—30, Legard Rd., Highbury, London, N. [1883]

WANTED to exchange, Indian 7-9h.p., 2-speed, clutch, with all red Swao sidcar, and little cash, for 1914 Morgan. Full particulars of Indian combination sent on request.—Marsden, 19, Potter St., Work-sop. [1616]

EXCHANGE Opel Othassis, 12-15h.p., Bosch mag., Zenith, disc wheels, excellent order, just completed £60 overhaul, for good motor cycle, Triumph countershaft or similar, or sell.—50, Bell St., Henley-on-Thames. [2207]

HALIFAX—New Airedale, Calthorpe, Lagonda, and Standard light cars; Norton, Triumph, Enfield, B.S.A., and Douglas motor cycles; quick deliveries; exchanges or deferred payments.—Motor Exchange, 25, Horton St., Halifax. [1725]

MILLS-FULFORD Underlugs Cbassis, complete, £8; sidcar chassis, underslung, £6; P. and M. cylinder, piston, £2; exchange for Tan-Sad, pan saddle, B. and B. carburettor, 650 steel-studded cover; cash adjustment.—19, Ashbourne Grove, East Dulwich. [1812]

WHY not place your order for a new machine now and obtain best price for your old mount. We will pay up to deposit and you take delivery as required.—Newham Motor Co., Exchange Specialists, 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [9973]

VERUS-BLACKBURN 4h.p., 1920 and sidcar, Easting, 3-speed, first-class, £120; exchange older and cash or extra cash for light car; also Harvey Frost vulcaniser and tools, Model A, perfect, exchange or cash offers wanted.—1, Grosvenor Rd., Rugby. [X9721]

EXCHANGE Late Powerplus Indian Combination, dynamo lighting, all accessories, done 2,000, original tyres, absolutely unscratched, magnificent outfit, cost £225 last year, for late solo and cash; sell £125; genuine bargain offer; exchange.—89, East Hill, Wandsworth. [2229]

5-6h.p. 3-speed F.N. Combination, with luxurious coachbuilt sidcar, hood and wind screen, disc wheels, electric lighting, just been renovated, costing over £60; price £75, or exchange for big twin combination or 2-stroke, cash adjustments.—3, Belgrave Rd., Mitcham. [2020]

EXCHANGE 1918 Singer 2-seater and dickey, dynamo lighting and starter, thoroughly overhauled and repainted Singer blue, new tyres, for G.N. or combination and cash.—Newham Motor Co., Exchange Specialists, 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [9969]

EXCHANGES—If you wish to exchange your motor cycle or car, you cannot do better than write us. See adverts. in classified columns for some of this week's bargains; exchanges arranged by post.—Newham Motor Co., Exchange Specialists, 223, Hammersmith Rd., W.6. 'Phone: Hammersmith 80. [9967]

1917 3¼h.p. Sunbeam (mileage 6,000), legshields, speedometer, Klaxon, lamps, Mead and Denkin O.B. sidcar with screen, footrest, and storm apron, splendid condition, end any guarantee; price £110, or exchange good jewellery or furniture with cash adjustment.—Goodwin, Framlingham, Suffolk. 'Phone: 17. [9699]

REPAIRERS.

ARMSTRONG or Sturmev-Archer Gears Repaired promptly and efficiently.—County Engineering Co., Hounslow. [5017]

R. FOSTER, of Leeds, is the original cylinder grinding specialist.

CYLINDER Grinding by Foster, of Leeds, has no equal. Price, complete with piston, from £2. £1,000 is the value of the machine and equipment that will grind your cylinder at our works.—Foster, of Leeds, 170, Cardigan Rd. [0003]

WHITTALL—Pistons complete from stock for all leading makes.

WHITTALL—Pistons with rings and gudgeons, Triumphs all dates, Premier, J.A.P., Bradbury, Douglas, B.S.A., Sunbeam; 14/- to 24/-, on approval; pattern and weight exact.

WHITTALL for Welding.—Aluminium experts; prompt delivery; repairs guaranteed.

WHITTALL—Cylinders promptly reground and new complete pistons fitted, 48/6, standard makes; perfection guaranteed; rebushing. Pistons to pattern or sketch.—Whittall Machinists' Co., Whittall St., Birmingham. [0017]

Armstrong and Sturmev-Archer

— GEARS —
REPAIRED IMMEDIATELY

We make a speciality of prompt and efficient REPAIRS, and GUARANTEE that when a Gear leaves our works it is in perfect order, so, if in trouble with your Gear, it is to your own interest to send it direct to us. This is the most satisfactory method and quickest, for we submit quotation same day, and repair immediately on receipt of instructions. If quotation not accepted, no charge.

REMEMBER.

We undertake to repair your gear while you or your messenger waits.

WHEN SENDING REPAIRS:

1. It is advisable to send complete wheel to Hounslow, L. & S. W. Rly.
2. A letter advising as to date despatch, station sent from, and mark and number of hub should be posted, and, MOST IMPORTANT, two labels bearing sender's name and address on reverse of both should be tied to the wheel.

Station for Callers—Heston-Hounslow, District Rly.

COUNTY ENGINEERING CO.

64, STAINES ROAD, HOUNSLOW, LONDON, W.

'Wires: "Threespeed, Hounslow."

ELCE

REPAIRERS.

CYLINDERS Rebored, new pistons fitted, from 46/- Wals (below).

PISTONS made to requirements in quick time. All Triumph and Sturmev-Archer spares and repairs; satisfaction guaranteed; welding and brazing.—Below.

WARD'S, 51, Upper Richmond Rd., Putney. [1631]
'Phone: Putney 2754.

ARMSTRONG and Sturmev-Archer Gear Specialists; practically every part in stock.—Below.

GEAR Repaired and retuned within the week; enquiries answered return of post.—Below.

MEDIUM Sns Pinions, 10/-; small planets, 2/6; pawl cages, 7/6; cones, 4/-; clutch caps, 7/8; clutch nuts, 3/-.—Below.

MAIN Drivers, £2/2; axles, 35/-; best material used; price list on application.—A. F. Lewis, Charlestown, Weymouth.

LONDON Agent for the above Armstrong gear parts: White, 437, West Green Rd., Harringay, London, N.15. [16000]

BRADBURY Spares and Repairs Agents.—Bright and Hayles, 78, Church St., Camberwell. [1048]

SIDECAR Chassis and Bodywork Repaired; estimates free.—Bright and Hayles, 78, Church St., Camberwell. [1061]

ARMSTRONG and Sturmev Gears repaired or parts supplied promptly.—Cherry Lane Garage, Lymn, Cheshire. [5194]

SHELDON Engineering Co. can convert your motor cycle to a countershaft geared machine.—Below.

SHELDON Engineering Co. can supply conversion sets, gear boxes, or parts to enable you to convert your machine to

COUNTERSHAFT Gear. Latest type chain-comb belt or all-coam model gear boxes fitted or supplied by

SHELDON Engineering Co., Bayley Lane, Coventry, who are recommended by the leading motor cycle manufacturers for conversions.—'Phone: 634. [7970]

CYLINDERS Reground, glass finish, accurate, complete with piston and rings, from 30/-.—Below.

PISTONS, complete with rings, standard or oversize, Douglas 15/-, Triumph, etc., 24/-; no waiting.—Below.

PISTON Rings, high grade, standard 1/6 oversize or step cut 2/-; return post.—Patent Rings, 33 Wigao Rd., Atherton. [9321]

ARMSTRONG and Sturmev-Archer gears repaired while you wait.—Tavistock Engineering (below).

ARMSTRONG Gears, all parts from stock; spindles, £1/10, £1/15; cones, 4/-; large spns, 6/6; small spns, 4/6, etc.—Tavistock Engineering (below).

ARMSTRONG Planet Pinions, 2/6; clutch caps 7/6; clutch nuts, 3/6; return of post.—Tavistock (below).

STURMEV-ARCHER Countershaft Gears Overhauled, 10/-; parts at makers' prices.—Tavistock (below).

GEARS—Any gears made to pattern or drawings. Send all gear repairs to Tavistock Engineering Co., 254a, Portobello Rd., North Kensington, London. 'Phone: Park 643. [4931]

WELDING Aluminium Crank Cases, gear boxes by experts; immediate attention; reasonable prices.—Below.

WELDING Broken Cylinders, flanges, combustion experts of 11 years' experience.—Below.

CYLINDER Grinding on latest machinery, installed since hostilities ceased; accuracy guaranteed; new pistons fitted.—Sadgrove and Co., 140, Conyher St., Birmingham. [476]

PISTONS for all engines up to 60 mm. 20/-, 70 mm. 22/6, 80 mm. 25/-, 90 mm. 27/6; complete with rings and pin.—Below.

CYLINDER Grinding on latest machinery, up to 7 mm. 45/-; to 85 mm. 52/6; complete with piston; 3-5 days delivery.—Kellett and Collinson, 140 Havelock St., Gt. Horton, Bradford. [981]

CYLINDERS Reground, new pistons fitted complete, £2/12/6.—Bright and Hayles, 78, Church St., Camberwell, London. [104]

FOR Expert Engine Overhauls, cylinder grinding, new pistons and spares, Hedley and Co., Fort St., Newcastle-on-Tyne. [151]

ENGINES Rebuilt overhauled, rings fitted, compression guaranteed; singles 35/-, twins 45/-; turned 3 days.—Below.

VALVE Seats Rebuilt from 10/-; valves, valve guides, piston rings, any make to pattern.—Turr Bros., Forest Motor and Engineering Works, Sumner, near Manchester. [15]

NEAR Enough is not Good Enough. Let us quote for your machine work and repairs; accurate guaranteed.—Below.

OBsolete Parts Manufactured, cylinders welded and reground, oversize pistons and rings, make; competitive prices, 24 hours service.—The Cam Motor Co., 29, Palmerston Rd., South Acton, 'Phone: Chiswick 343. [21]

FRAME, chassis, and tank repairs, enamelling, plating by experts; prompt deliveries.—Lagha Co., Fitzroy St., Leicester. [6]

A Manx T.T. After All!

AFTER all the annual Tourist Trophy Races are to be held in the Isle of Man in 1922. This is the decision of the A.C.U. General Committee, which body last Saturday rejected the recommendation of the Competitions Committee to hold next year's race in Belgium. The race may be held towards the end of May or at the beginning of June, but in any case before the two car races already arranged for June 20th and 22nd. Among the A.C.U. committeemen, opinion was clearly divided. The Belgian course had many attractions, the main one being the financial inducement offered to the A.C.U. by the Belgian authorities for a race near Spa. Badly as the A.C.U. needs improved finances, the Committee was clearly not ready to be over-influenced by monetary considerations. The event has gained its recognised importance on British soil, and the present is hardly the time to transfer many thousands of pounds to foreign soil. In view, therefore, of the promises and undertakings of the deputation which arrived from the Isle of Man, the air was cleared, and finally the decision to retain the Manx course was reached by an overwhelming majority.

When, in August last, the announcement was made that the A.C.U. had "decided" upon a Belgian course for the T.T., *The Motor Cycle*, it will be recalled, at once tested the feeling of manufacturers and T.T. riders. Many strongly advocated Belgium, and approximately half equally strongly urged the retention of the Isle of Man course over the Snaefell road. The objections to the Isle of Man were, however, so thoroughly ventilated that enterprising Manxmen at once set to work to cancel out the objections which were advanced. As a result, nearly all the pin-pricks experienced by former visitors have been or will be investigated, and many concessions are promised, including a double daily boat service, a harbour crane for handling motor cycles properly, half an hour later for practising, a shilling registration fee

for visitors' motor cycles, and assistance in various other directions. Thus the Manx deputation won the support of the A.C.U. for another year, and the side question as to whether the 500 c.c. machine is too fast for the tortuous Isle of Man course, and therefore cannot show itself to advantage, must be left for further demonstration next summer.

Fewer Open Competitions in 1922.

DUE to the larger number of open motor cycle competitions held this year, their importance has been considerably minimised. Two and three important contests each week-end have assisted in overshadowing the merit of a first-class award, apart from which the very fact that open trials have become so numerous is leading to a lukewarm feeling on the part of manufacturers. Fewer open trials will mean that each one will gain added importance. Recognising this state of affairs, the Auto-Cycle Union General Committee resolved at its last meeting to limit the number of open permits next year. One open permit only will be granted to each A.C.U. centre (there are fifteen at present), which decision will prevent clashing of dates and possibly induce manufacturers to support such events unanimously. These open trials are in addition to certain recognised A.C.U. trials, such as the Six Days event, the T.T., the Arbuthnot Trophy Trial, and the one-day test for stock machines. All motor cyclists will, we feel, welcome this limitation of open events, for the genuine clubman will now have a better chance, especially in speed trials and hill-climbs, than hitherto when pitted against the leading trade riders on specially prepared machines.

At Olympia a meeting is to be called by the A.C.U. to settle the fixture list for 1922, the idea being to spread the allotted events over the whole twelve months. The centre will in each case decide the form of the trial, viz., whether a speed test, hill-climb, or reliability event.

The Challenger Puncture-sealing Tube.

I REPORTED recently that I had found these tubes satisfactory in that they prevented a tyre deflating after penetration by small nails or flints. My comment provoked a letter from another user, whose experience is not so pleasant. He has tested one of the tubes, and in his case its effect is merely to render further progress possible with the aid of occasional pumping up, so that repair may be deferred till the journey is finished; but the layer of plastic material between the two skins of rubber on the tread side of the tube does not in his case—as it has in mine—ever seal the hole *completely*; the sealing is merely partial. He further points out that, in the event of a long nail penetrating both sides of the tube, the inner hole necessarily remains unsealed. To judge from my own experience, I should imagine that the plastic layer in his tube is stiffer and less expansive than mine, which so far has proved quite efficient where small holes are concerned. Perhaps the manufacturers may care to take up the point?

Everlasting Flash Lamps.

I COMPLAINED pettishly the other day that my so-called inexhaustible electric torch “had gone west,” that the vendor had shut up shop, and that nobody seemed eager to repair it. As it has lit up many a night job, ranging from burst covers to sooted plugs, I missed its cheery presence, the more so as I had half digested a brainwave for coupling up its lever to the overhead valve tappet, and so setting both my hands free for the jobs in hand. Captain French-Brewster, of 23a, Old Bond Street, is now the British handler of these French lamps, and scenting me as a user of his wares, he played “Aladdin’s Uncle,” and swapped my old dud for one of his latest pattern, which weighs much less, and is altogether a superior article. I have accepted it with my usual cynicism, and if by next Christmas the article is still sparking gleefully, I will say so in these columns. At present I name him partly because he is obviously a man of bowels, and partly because there may be other unfortunates like myself who have worn out the gears of an early model, and do not know what to do with the wreckage of a fairly expensive article. The same post brought me a sample of a much cheaper dynamo torch, the Magneto-lite. This is handled by Mr. F. S. Morris, of Conway

Road, Luton. It hangs round your neck like a locket, and when you want a light, you pull a chain which depends from the case of the gadget. Mrs. Ixion has borrowed it, and intends to use it for church going this winter. She is a somewhat pious lady, and by about Easter I hope to report that it has facilitated her orisons. In confidence, dear reader, I admit that my main motive in giving publicity to these two gadgets is to get my own back on the unscrupulous traders who have coaxed me into buying apparently cheap torches, and then bankrupted me by charging high prices for batteries which apparently inspired the author of Hymn 341.

Passengers, Power, and Hills.

“DUMPLING” and others have been discussing the horse-power required for passenger work in such counties as Devon. So far as absolute requisites are concerned, a 4 h.p. engine will take two people anywhere in the British Isles provided that the gearing is suitable, and that the engine is so well designed that it does not distort on long spells of a really low gear. But I quite agree that more power is desirable, and that for two main reasons. The first is that most of us like to keep up a certain average speed, and that fast hillwork is essential to a good speed average. You can only get fast hill-climbing with the aid of plenty of power. The second reason is that a small engine, driven hard, wears faster, and gives more trouble than a big engine of the same quality, which is always running well within itself. So if I lived at Tavistock, my sidecar would certainly boast 6 h.p., and my cycle car would be an 8 h.p., since the latter often embodies far more internal friction than a good sidecar outfit.

Not a Pub.

MY recent remarks on the rapacity of certain hotels have inspired a Cheshire café keeper to complain that, though he lays himself out to cater for motor cyclists, they always pass his place and go on to a pub. I have never fed at his café, but on the date of his letter he provided vegetable soup, roast beef, Yorkshire pudding, potatoes and marrow, rice and fruit, for 2s. at midday, and his “bed and breakfast” terms are 6s. 6d., whilst a hot bath, such as we often need after a day on the road, is only 6d. He is probably shrewd enough to know that the motor cyclist’s main problem with

Occasional Comments.—

regard to cafés and restaurants is garage. We never know whether the police will allow the machine to stand in the road or not; and if they are complaisant, we have no protection against thieves; and if we take the 'bus to a regular garage, we may have to walk a considerable distance, or hunt about in a strange town, whilst in any case we shall have to pay—possibly 1s. 6d.—for a sidecar for one hour.

Prop Stands.

DON'T tumble over yourselves, dear readers, to buy up the prop stands of which I have written. Doubtless some of them will be O.K. by show time, but as yet most of them are in the experimental condition. I was adoring one of mine the other day when its leg suddenly wilted, and down came my beloved jigger on its hip bone with an awful crash, to the great glee of the pals whom I had summoned to do poojah to the new accessory. It transpired during the post mortem that the carcass of the beastie was made of brass, to which the steel tube leg was affixed by a small pin; the pin bit through the brass as if it were Cheddar cheese. I am now bolting on two more, after testing them with a file to see if there is any brass about them; but I must admit that I stand near the machine when they are in action, with my arms outstretched like the hero in a film serial when the villain is terrifying the heroine into diving out of a skyscraper fifteenth storey window.

Brass! Ugh!

My Coat Once More.

NUMEROUS readers engaged in the alum-and-water industry wrote and guaranteed to make my poor old motor cycling jacket drencher-proof once more for a consideration. I finally sent it

to Harding's dyeworks at Kingston, as their manager is a keen motor cyclist, and offered to stand me a new coat if my old one leaked anywhere after he had finished with it. It doesn't, so the ancient garment must do duty for another summer, unfortunately. It was in a horrid state ere it went to him, and now it is as good as new, except that it has rather a bleachified kind of look. All these various experts assert that it is quite an easy and inexpensive matter to renovate these old jackets. They append two "buts." One is that the colour is bound to suffer a little. The other is that a number of cleaning firms merely dip the coat in alum-and-water to re-proof it, whereas it is impossible to get it really watertight without using rubber in some form. The last time I trusted a coat to an unknown reader it returned with a glutinous surface and a colour resembling a piece of frozen beef after a week in the ashbin.

Otherwise, a "Crash."

JOURNALISTS are commonly supposed to use ten words where one will do, and this reprehensible habit is accounted for by the fact that the meaner kind of journalist gets his remuneration at space rates. But a breezy letter just to hand from an A.C.U. consul, who also belongs to one of the learned professions, speaks of "a slight difference of opinion in relative kinetics between my Norton and myself." Never again will I be content with the simple Saxon word "crash." In the last two years the said consul has owned three Nortons (B.R.S., I.O.M., and 4 h.p.), a Scott, a Velocette, an A.B.C., a single-cylinder F.N., and a four-cylinder F.N. I wonder if any other reader can match this high-class stud? The I.O.M. Norton's mileage for nineteen months is 26,000, and it is still using its original main and con. rod bearings.

Two Anglo-Dutch trial competitors near Malvern: C. L. Sprosen (Connaught) leading J. M. Boom, jun. (5 Simplex). This event was fully described last week

Before the trial the visitors from Holland were nervous about the Brooklands test; many of them imagined that it was a saucer track requiring special skill in order to traverse it. Here are shown the international competitors a few seconds after the start of the speed test.

THE fourth of the series of Anglo-Dutch international trials proved as great a success as its forerunners. Undoubtedly our Dutch guests appreciated the entertainments provided by the sporting English clubs for their benefit, and were not slow to express their pleasure. With two wins for either country honours are now even, except that Holland won the original trophy in 1920, by which success it has an advantage, England holding the first share in the new "Beker" by reason of its overwhelming success last week. If anything, the Dutch motor cyclists entered this year's contest with greater zest than their British *confrères*. Nothing was left to chance by our overseas visitors, and to see the hive of activity at

Worcester on the eve of the trial, when, "just to make sure," the Dutchmen dismantled carburettors, removed sparking plugs, and shortened belts, in itself proved their enthusiasm. Most were suffering from smarting eyes, for they found that our tarred roads cause particles to rise with the dust and affect their eyes.

Three of the earlier competitors arriving at Brooklands. W. B. Gibb (2 $\frac{1}{2}$ Douglas), leading, is intently studying his watch, while the Dutch rider just behind, has found a new position for the route card—gripped in his teeth.

Of the trial itself, we recorded clearly last week that hill-climbing is not the Dutchmen's *forte*, yet, appreciating that fact, the course set was not too difficult, and was mostly over main roads. What would have happened if the Old Wyche at Malvern had been included one can only conjecture, in view of the fact that thirteen failed on Birdlip. The Dutch amateur captain, H.

THE ANGLO-DUTCH TRIAL. Some Pictorial Reminiscences.

(Top) The visitors leaving Chingford en route for the boat at Harwich. Mr. J. A. Prestwich, of J.A.P. fame, wishes our departing guests "good luck."

(Middle) In the garage at the luncheon stop on the day of the trial (fully described last week)

(Bottom) An old English background for a parting portrait group of the Dutch team—Chingford.

Why England Won.—

Fels, thought Birdlip a fine test hill. The Dutch team's mounts were good and workmanlike, for, with mainly British and American machines in the team itself, the trial largely resolved itself into a question of driving skill. On Brooklands, again, the set speeds of 28, 35, and 40 m.p.h. were not extraordinary, but the Britishers showed to advantage in this test. It had been suggested that 40 m.p.h. was too high for the big American solo machines which the Dutchmen brought over, but since several much smaller British

sequently entertained to luncheon by Mr. J. A. Prestwich at the Royal Forest Hotel, Chingford. Here it was that the full provisional results were announced, the International Cup itself having been received by Messrs. Geoffrey Smith and W. Pratt, captains of the British amateur and trade teams respectively, after the dinner at Thames Ditton on Monday.

The Dutchmen were immensely intrigued by Ald. Arthur Carlton's remarks at the Guildhall, Worcester, as well as by the witty rejoinder, a clever spontaneous effort, by the A.C.U. chairman, Col. F. S. Brereton, C.B.E.

There is no doubt that these trials between teams representing different countries do a great deal of good in fostering good feeling among devotees of the pastime. They, too, enable an interesting comparison of experiences, for Dutch motor cyclists have certain preferences which are worth studying. They prefer powerful twins,

The line up for the speed test on Brooklands. (In circle) G. Hoogveen (7-9 Harley-Davidson sidecar) near Cirencester.

mounts considerably exceeded this speed, the criticism falls flat. In short, Birdlip Hill and Brooklands proved the undoing of the Dutch team, and even at the luncheon halt at Newbury the result was already almost a foregone conclusion.

For the social entertainments provided, the Midland Centre at Leamington and Stratford, the Western Centre at Worcester, and the A.C.U. in conjunction with the Surbiton and District M.C.C. at Thames Ditton are to be heartily congratulated.

Incessant Hospitality.

Not a single participant failed to express appreciation of the fare provided, and our friends from Holland returned as they had started—with an excellent impression, for the Essex M.C. were thoughtful in providing breakfast on the morning of their arrival, whilst on Tuesday, when the Dutch team left for Holland, they had the opportunity of looking over the J.A.P. works at Tottenham, and were sub-

a cut-out seems to be a *sine qua non*, they wear leather coats almost exclusively (black or brown), they affect racing helmets at all times, they prefer pillion riding astride with a hand-rail for support, their sidecars are mostly on the right-hand side, and the louder the horn the more they like it. Several told us that British mounts are preferred in Holland, to a degree, and the preference which they suggest is their limit was put at 10%. Big American twins, fully equipped, cost £125 in the Netherlands, and no matter how much they may prefer the finish and quality of British products, their pockets will not allow more than a 10%

Why England Won.—

advantage over this figure. Holland is experiencing the effect of the world trade depression, and must accordingly study costs carefully.

Undoubtedly, however, Britain loses many opportunities on the Continent in failing to specialise on first-rate examples of controllable twin-cylinder machines of 6 to 8 h.p. capable of successful use solo and with a sidecar, and this is a point worth studying. On the other hand, several Dutch riders of experience marvelled at the speed of our best single-cylinder touring mounts, and also of their willingness to tick along quietly and smoothly when desired.

Why Heavyweights are Popular in Holland.

In our many conversations with the visitors, we were told that the chief reason why the big twin is favoured in Holland is that the roads in that country are very poor, and that, in their opinion, the heavier machines hold the road much better than the lightweights so popular in this country. These opinions suggest that there is a certain market in Holland for an efficient spring frame motor cycle.

It was clear that England's motor cycling guests were keenly interested in the many different examples of British motor cycles ridden by the members of the English team, and, as several of the Dutch riders were "in the trade," the excellent performances made by the smaller British machines may be regarded as propaganda demonstrations for the British industry in general.

Most Dutch motor cyclists, of course, like the idea of next year's T.T. being held in Belgium, and one may count upon a goodly percentage of spectators from the neighbouring country, if Spa is finally approved.

Complete Results.

Complete results of the fourth international trial—England v. Holland—are now available, and are appended:

The principal award, the HOLLAND-ENGLAND CUP (presented by Mr. A. Citroën) was won by the English team, who lost

a total of 52 marks throughout the trial, as against the loss of 256 marks by the Dutch team.

The SURBITON CUP (presented by the Surbiton and District M.C.C. for the best performance by an English trade rider) was won by Kaye Don (2½ A.J.S.), who only varied fifty seconds from schedule throughout the trial.

The WORCESTER CUP (presented by the Worcester and District M.C.C. for the best performance of a Dutch trade rider) was won by W. van Zyll (7-9 Harley-Davidson sc.), 140s. error.

The Motor Cycle Cup (presented by this journal for the best performance of any amateur rider) was won by R. Charlesworth (8 Zenith sc.); 80s. error.

Gold Medal Winners (Lost no Marks)**DUTCH COMPETITORS.**

V. Fonck, jun. (2½ Cedros).	W. M. Zelle (6 Simplex).
A. Steensma (4 Blackburne).	H. Fels (7-9 Harley-Davidson sc.).
J. M. Boom, jun. (5 Simplex).	W. van Zyll (7-9 Harley-Davidson sc.).
P. Nieman (5 Simplex).	J. A. F. Bolland (7-9 Harley-Davidson sc.).
J. F. N. Smits (7-9 Harley-Davidson).	T. T. Gude (7-9 Harley-Davidson sc.).
W. H. Wellensiek (4½ B.S.A.).	
J. H. Nieuwenhuys (6 Simplex).	

ENGLISH COMPETITORS.

D. A. Atkin (2½ Hobart).	L. Newey (3½ Ariel).
B. Kershaw (2½ New Imperial).	J. Whalley (3½ Sunbeam).
K. Don (2½ A.J.S.).	L. Sealey (3½ B.S.A.).
W. B. Gibb (2½ Douglas).	R. Charlesworth (8 Zenith sc.).
H. R. Davies (2½ A.J.S.).	J. A. Newman (6 Douglas sc.).
C. L. Sprosen (2½ Connaught).	G. Nott (8 Matchless sc.).
F. A. Hardy (3½ Zenith-Bradshaw).	E. B. Ware (8 Matchless sc.).
G. Smith (3½ Sunbeam).	S. Wright (4½ Humber sc.).
	W. A. Fell-Smith (8 Brough Superior sc.).

SILVER MEDALS (DUTCH COMPETITORS).—Jac Brunt (2½ Douglas), J. R. Donker (2½ Royal Ruby), E. Ekker, Junr. (4 Bianchi), C. J. H. Wolff (2½ Royal Ruby), M. v/d Jagt (3½ Norton), J. W. Ten Dam (7-9 Harley-Davidson), J. v/d Weiden (7-9 Indian), G. J. Hamer (7-9 Indian sc.), G. Hoogeveen (7-9 Harley-Davidson sc.), F. J. Visscher (7-9 Indian sc.), and C. Witteveen (7 James sc.).

BRONZE MEDALS (DUTCH COMPETITORS).—Nil.

SILVER MEDALS (ENGLISH COMPETITORS).—O. Hayes (2½ A.J.S.), A. G. Wall (2½ Cedros), F. Dover (4 Triumph), R. A. Green (3½ Norton), H. Boynton (7 James sc.), W. Pratt (8 Matchless sc.), and F. J. Ellis (8 Matchless).

BRONZE MEDAL (ENGLISH COMPETITOR).—P. W. Moffatt (3½ Douglas).

N.B.—These results are subject to official confirmation.

The Dutch motor cyclists at Stratford-on-Avon.

SPECIFICATION

ENGINE: 60.5 mm. x 60 mm.,
345 c.c.LUBRICATION: Crank case
pressure.

MAGNETO: C.A.V.

CARBURETTER: B. and B.

GEAR BOX: Three-speed, integral
with engine.TRANSMISSION: Gear and final
chain.

WHEELS: 26 x 2 1/4 in.

FORKS: Wooler.

FRAME: Sprung.

WEIGHT: 168 lb.

PRICE: £112.

MAKERS: Wooler Motor Cycle Co.,
Ltd., Alperton, Middlesex.

THE new chain-driven Wooler came into our hands a few days prior to this year's T.T., and was used for some time after it had been to, and had returned from, the Isle of Man. One reason for choosing this mount for the journey to the classic races was due to the fact that it is a machine of moderate weight, and yet one which is capable of a very fair average speed on long journeys. Only those who have taken a motor cycle over to the Island know how important the weight factor is when lifting the machine from the steamer to the quay at Douglas.

For the journey from London to Liverpool (*via* Birkenhead) the route through Berkhamsted, Aylesbury, and so on south of Birmingham, was chosen in preference to the main Holyhead Road-Watling Street way, which is very rough in parts, and on the morning we set out a furious north-westerly gale was blowing, thus compelling a head wind to be faced for practically the entire journey.

On the whole, the road was exceedingly good, but where rough patches were traversed the springing of the frame was greatly appreciated.

The little machine was heavily laden with a bag containing all that was necessary for a week away from home, but, notwithstanding the weight carried and the fearful wind, quite a good average was made.

After Aylesbury, Akerman Street—that fine old Roman road which passes through the fertile parts of Buckinghamshire and Oxfordshire, so famed for its dairy produce—was followed. Owing to the number of milk-carts passed at different times on this highway, a certain rider of our acquaintance aptly named it "The Milky Way."

Our journey continued through Bicester and Stratford-on-Avon, but, when more hilly parts of the country were encountered, a slight slipping of the clutch was experienced, which could not be cured by external adjustment. However, the clutch held well enough to drive if reasonable.

The handle-bar adjustment on the 2 1/4 h.p. Wooler.

Road Tests of New Models—

The Wooler lubrication system. The oil contained in the air release from the timing gear is forced against a baffle at the top of the saddle tube, and, falling to the lower end of the tube, rises to the level of a pipe, which returns it to the sump.

steering was excellent, and that the riding position was comfortable. It was good at cornering, capable of very nearly 30 m.p.h. average on level roads, and practically vibrationless; like most units of its type, the engine depends upon revolutions for its power, and if there is doubt about climbing a hill on top speed it pays to change early down to second, when up to 25 or even 30 m.p.h. may be attained.

As regards trouble on the road, apart from the clutch slip (which was afterwards found to be due to a bad batch of springs) and a broken plug, there was none: and the journey, including stops for meals, etc., was accomplished easily in ten hours. In the Isle

care were used; this notwithstanding, a very fair average was kept up all the way to Birkenhead, which was reached via Droitwich, Kidderminster, Bridgnorth, and Chester.

The ferry from Birkenhead to Liverpool is quite excellent from the motor cyclist's point of view, for the service is frequent and the cost only a matter of pence.

During the 190-mile journey the machine had demonstrated that its

of Man itself the machine gave splendid service. Another test to which the Wooler was put was the Inter-team Trial for *The Motor Cycle Cup*, when it was taken round the course and climbed every hill successfully. This latter excursion was far more trying to the machine than the other 300 miles, and despite the rough roads and steep gradients, it proved itself to be a handy, reliable little mount.

Too Sensitive Carburation.

From the point of view of adverse criticism, the chief objection is against the carburetter, which was reminiscent of earlier days in that it required too much manipulation of the air lever to obtain flexibility and even running. Valve noise was also rather prominent. The lubrication appears to be perfect, and little could be said against the method of changing speed, which is accomplished by the foot, though a stronger spring against the plunger locking the second gear would be desirable. The machine is full of interesting points, and its designer, Mr. Wooler, has embodied many ingenious features. The unit construction of engine and gear box is worthy of favourable comment. Small details have been carefully considered; for example, the position of the speedometer dial on the front forks, so that it is illuminated at night by the air holes at the base of the lamp, is a case in point.

The 2½ h.p. Wooler all-chain model, fitted with 60.5 × 60 mm. flat twin engine, and three-speed gear box.

ROAD TESTS OF NEW MODELS.

SINCE January, *The Motor Cycle* has published a number of articles dealing with the road behaviour of new models and new machines. To enable readers to refer back to any of these, we append the following table, showing the dates of the issues in which they appeared.

Machine and Model.	Title of Article.	Date of Issue.
7 h.p. Matchless sidecar ...	"Through the 1920 Trials"	Jan. 13
8 h.p. Brough Superior ...	"Road Tests of New Models"	Jan. 20
5 h.p. Raleigh ...	"Road Tests of New Models"	Feb. 10
8 h.p. Royal Ruby sidecar ...	"Riding to Win"	Feb. 17
3½ h.p. Sports Sunbeam ...	"Road Tests of New Models"	Feb. 17
3½ h.p. P. & M. sidecar ...	"Winter in the Highlands"	Mar. 3, 10
2½ h.p. Armis sidecar ...	"Road Tests of New Models"	Mar. 3
4½ h.p. Quadrant sidecar ...	"Road Tests of New Models"	Mar. 10
1½ h.p. Kenilworth Miniature ...	"Road Tests of New Models"	Mar. 24
3½ and 7-9 h.p. Rudge sidecars	"Road Tests of New Models"	Mar. 31
8 h.p. Excelsior sidecar taxi.	"Road Tests of New Models"	April 7
2½ h.p. Diamond-Jap ...	"Road Tests of New Models"	April 7
5 h.p. Lea-Francis ...	"Road Tests of New Models"	April 14

2½ h.p. Francis-Barnett ...	"Road Tests of New Models"	Sept. 22

WAYSIDE MEMORIALS.

Highway Lighthouses to the Memory of the Fallen.

THERE have recently been unveiled two most unusual roadside war memorials in different parts of the Home Counties which might well be copied in other places. One is at Beaconsfield, and the other at Lingfield, Surrey; and both are lighted at night. It is believed that, with the exception of one in Kent, these are the only two war memorials designed to exhibit lights. That at Beaconsfield stands in the midst of the village, where the London and Oxford and Windsor and Aylesbury roads cross. It is designed

The electrically lighted memorial at Beaconsfield.

to be in harmony with the Gothic architecture of the parish church in the background. The open stone lantern of the memorial is fitted with electric light. Fortunately the roads at this point are very wide: exceptionally so; and the imposing monument is thus not in the way; and the light secures that it will not be the cause of some nocturnal accident.

The Lingfield memorial is fitted for gas. It forms an added feature of interest just outside that picturesque village, at its western extremity. This point, the so-called "Gun Pond" at St. Peter's Cross, on the New Chapel and Crawley Road, is a very pretty spot. Here a stone base has been built into the pond, and the tall stone shaft of the memorial raised upon it. The queer old building in the background is the ancient Lingfield lock-up, called "The Cage." It is thought originally to have been a chapel. C.G.H.

The war memorial at Lingfield, the stone lantern of which is fitted with gas lighting.

SCOTTISH OPEN HILL-CLIMB.

Successful Event Organised by the Glasgow Western M.C.C. on Ballagoich Hill.

AN open hill-climb organised by the Glasgow Western M.C.C. was held at Ballagoich on September 24th. It is the first time that this hill has been used for a climb, but, with its straight half-mile of good surface, it was a great success.

There was a large entry, many competitors coming from Edinburgh and Falkirk. A. Brown rode from Aberdeen to compete on his $3\frac{1}{2}$ h.p. Norton, and made a fine show, winning three firsts and the Paterson gold medal. R. M. Wilson put up a star performance on his $2\frac{1}{4}$ h.p. Hobart; the way his little machine took the hill in the 600 c.c. sidecar class came as a surprise to many. A. H. Alexander carried off five classes on his $3\frac{1}{2}$ h.p. Douglas, while Douglas Alexander made fastest time of the day on his Indian.

The results are as follows:

CLASSES 1 and 3 (Solo up to 350 c.c.). Experts barred.—Time: R. M. Wilson ($2\frac{1}{4}$ Hobart). Formula: F. M. Wilson ($2\frac{1}{4}$ Hobart).

CLASSES 2 and 4 (Solo up to 350 c.c.).—Time: J. W. Walker ($2\frac{3}{4}$ A.J.S.). Formula: J. W. Walker ($2\frac{3}{4}$ A.J.S.).

CLASSES 5 and 7 (Solo up to 600 c.c.). Experts barred.—Time: A. Brown ($3\frac{1}{2}$ Norton). Formula: A. Brown ($3\frac{1}{2}$ Norton).

CLASSES 6 and 8 (Solo up to 600 c.c.).—Time: J. W. Walker ($3\frac{1}{2}$ Douglas). Formula: J. W. Walker ($2\frac{3}{4}$ A.J.S.).

CLASSES 9 and 11 (Solo unlimited). Experts barred.—Time: A. Brown ($3\frac{1}{2}$ Norton). Formula: A. Brown ($3\frac{1}{2}$ Norton).

CLASSES 10 and 12 (Solo unlimited).—Time: D. S. Alexander

(7-9 Indian). Formula: A. H. Alexander ($3\frac{1}{2}$ Douglas).

CLASSES 13 and 15 (Sidecars up to 600 c.c.). Experts barred.—Time: R. Watson ($4\frac{1}{2}$ Humber sc.). Formula: R. M. Wilson ($2\frac{1}{4}$ Hobart sc.).

CLASSES 14 and 16 (Sidecars up to 600 c.c.).—Time: A. H. Alexander ($3\frac{1}{2}$ Douglas sc.). Formula: A. H. Alexander ($3\frac{1}{2}$ Douglas sc.).

CLASSES 17 and 19 (Sidecars unlimited). Experts barred.—Time: R. Watson ($4\frac{1}{2}$ Humber sc.). Formula: R. M. Wilson ($2\frac{1}{4}$ Hobart sc.).

CLASSES 18 and 20 (Sidecars unlimited).—Time: Geo. Grinton (7-9 Harley sc.). Formula: A. H. Alexander ($3\frac{1}{2}$ Douglas sc.).

The four-stroke $2\frac{1}{4}$ h.p. lightweight has come to the fore in speed events since its success in the 250 c.c. class in the Junior T.T. R. M. Wilson, shown above, put up a star performance on his little Hobart.

SPECIAL AWARDS.

PRIZE FOR THE HIGHEST FIGURE OF MERIT IN THE GENERAL CLASSES.—J. W. Walker ($2\frac{3}{4}$ A.J.S.).

PRIZE FOR HIGHEST FIGURE OF MERIT (experts barred).—R. M. Wilson ($2\frac{1}{4}$ Hobart).

THE BARNETT GOLD MEDAL.—R. Wilson ($2\frac{1}{4}$ Hobart).

THE PATERSON GOLD MEDAL.—A. Brown ($3\frac{1}{2}$ Norton).

PRIZE PRESENTED BY W. SIMPSON FOR FASTEST TIME OF THE DAY.—Douglas Alexander (7-9 Indian).

**Tiverton M.C. and L.C.C.**

Since its inception a short time ago, the club has gained enthusiastic support over the whole neighbourhood. With Capt. L. H. Amory as president, there is now a membership of over a hundred motorists. The club is now in proper working order; social runs have already been arranged, to the satisfaction and enjoyment of all. One reliability trial has so far taken place, and a hill-climb will probably be held shortly.

Bristol M.C.C.

Only one sidecar, F. G. Mann's Harley-Davidson, made a clean climb of Bwlch-y-Groes in the recent twenty-four-hour trial; four soloists, Anstice (3 A.B.C.), McWalters (6 Zenith), Cornish (2½ Ready), and H. Spencer (4 Omega), also made perfect ascents. Results:

THE HUTCHINSON CUP.—F. G. Mann (7-9 Harley sc.), — McWalters (6 Zenith), and H. Spencer (Omega-Blackburne), tied.

FOURTH PRIZE.—E. G. Fery (6 Douglas sc.).
GOLD MEDALS.—K. J. Woods (3½ Wilkin sc.), E. Colmer (3½ Norton sc.), and — Cornish (2½ Ready).

SILVER MEDAL and SPECIAL PRIZE.—J. Edbrooke (2½ Douglas).

The last-named gained the special award for the best ride other than the prize-winners; at one stage he towed another competitor, similarly mounted, for twenty-seven miles.

Southport A.C.

On the 25th ult. the club held a reliability trial for the Searisbrick Cup. The course was one of 100 miles, mainly over moss roads, with two observed hills. Results:

A. Douglas (3¾ Scott), Russell King (3¾ Scott), A. Jarvis (2½ Jarvis), B. Allinson (3¼ Sunbeam), and R. Ball (3¾ Scott), equal 1st. 1st Lightweight, A. Jarvis (2½ Jarvis); 2, C. Cunningham (2½ Veruel).

Week-end Club Events.

- Oct. 8.—Sutton Coldfield and North Birmingham A.C. Hill-climb on Penkridge Bank.
- Oct. 8.—Essex County and Southend A.C. Closed Speed Trials.
- Oct. 8.—Redditch and District M.C.C. Sporting Reliability Trial (open to all Midland Centre A.C.U. clubs).
- Oct. 8.—Taunton and District M.C. and L.C.C. Land's End Trial.
- Oct. 8.—Luton and South Beds. A.C. Paperchase.
- Oct. 8.—North Wales M.C.C. Hill-climb.
- Oct. 9.—Stafford and District M.C.C. Consistent Driving Test.
- Oct. 9.—Stafford and District M.C.C. Captain's Run.
- Oct. 9.—North-west London M.C.C. Closing Run.
- Oct. 9.—Leeds M.U. Hill-climb.
- Oct. 9.—Sheffield M.C.C. Run to Castleton.
- Oct. 9.—Halifax and District M.C.C. Run to Castleton.
- Oct. 9.—Basingstoke and District M.C. and L.C.C. Club Run.
- Oct. 13.—Oxford M.C. Speed Judging Contest.

Levis Athletic Club (Motor Section).

Results of the Yardley Cup trial, described last week, are appended:

YARLEY CUP and GODFREY GOLD MEDAL for the Best Performance of the Day.—A. R. Edwards (2¼ Levis), 246 marks.

SILVER MEDALS.—Class B: W. S. Hawcutt (2¼ Levis) and J. Knibbs (2¼ Levis) tied, 243 marks each. Class C: N. D. Pickering (3¼ Triumph), 232 marks.

SILVER MEDAL for the Best Performance on a Levis Motor Cycle with 26in. Wheels.—J. Knibbs (2¼ Levis), 243 marks.

BRONZE MEDALS.—Class A: G. S. Davison (2½ Levis), 229 marks. Class B: S. Jones (2½ Levis), 233 marks. Class C: W. V. Pickering (3¼ Triumph) and J. H. V. Wood (3¼ Triumph) tied, 220 marks each.

SPECIAL MEDAL for the Best Performance on the Observed Hills by a Competitor not qualifying for any other Award.—Gem Smith (3¼ B.S.A.), 209 marks.

SPECIAL PRIZE for the Best Performance by a Private Owner on a Machine over 250 c.c. and under 350 c.c. in Classes B or C: J. Knibbs (2½ Levis), 243 marks.

PREMIER PRIZES.—1, For the best performance by a private owner on a machine up to 250 c.c. in Classes B or C: L. West (2¼ Velocette), 141 marks. 2, For the best performance by a private owner on a machine over 350 c.c. in Classes B or C: W. V. Pickering (3¼ Triumph) and J. H. V. Wood (3¼ Triumph) tied, 220 marks each.

Sutton Coldfield and North Birmingham A.C.

A hill-climb will be held on Saturday at Penkridge Bank, open to all clubs in the Midland Centre A.C.U. Classes will be run on time and formula, $\frac{C \times T^2}{W}$

Motor Cycling Club.

Results of the one day trial for solo machines, described last week, have been announced as follows:

GOLD MEDAL WINNERS.—C. F. Plowman (3¼ Sunbeam), B. H. Brayne (4 Blackburne), D. H. Davidson (4 Indian Scout), P. Cunningham (3½ P. and M.), P. Street (3½ Sunbeam), R. Pugh (4 Triumph), A. C. Rhodes (4 Triumph), J. Wallis (Bradbury), V. Belfield (3 A.B.C.), L. Nicholson (Coulson-B.), N. G. Dear (3¼ Sunbeam), J. McBirnie (7-9 Indian), V. Olsson (3¼ Sunbeam), T. Francis (4 Triumph), S. J. Marks (4 Triumph), S. Dunford (2¾ Verus), M. O'Reilly (3¼ N.U.T.), F. R. G. Spinks (3 A.B.C.), O. W. Jones (7-9 Harley-Davidson), C. Bourlet (3¼ Ariel), S. A. McCarthy (5 Stanger), W. C. Hemy (2¼ A.J.S.), H. G. Bell (7 F.N.), G. M. Townsend (3¼ P. and M.), M. A. Newnham (5-6 Raleigh), R. B. Clark (2¾ Coulson-B.), H. F. Edwards (4¼ B.S.A.), S. Warne (3 Warne), J. A. Hoult (3¾ Scott), T. J. Ross (3¾ Scott), and F. A. Longman (3¼ Ariel).

The cases of E. Hillary (3½ Rover), who is reported to have left the course, and F. Begley (4 Indian Scout), who is reported to have missed his gear on Pole Steeple, are being considered.

Taunton and District M.C. and L.C.C.

Encouraged by the success attending the recent Yeovil-Land's End trial, the committee has decided to hold a further reliability run to Land's End on Saturday. The exact route on this occasion will be a secret one. The trial is open to the following clubs: Barnstaple, Bournemouth, Bridgwater, Dorehester, Exeter, Launceston, Okehampton, Plymouth, Taunton, Tiverton, Truro, Weston-super-Mare, and Yeovil. An excellent entry has been received.

East Midland Centre A.C.U.

Excepting an unfortunate accident to Mr. K. S. Topping, the honorary secretary of the Centre, the recent speed trials organised by the North Derbyshire M.C.C. were very successful. Results:

550 c.c. SIDECARS.—Expert: 1, E. Searle (3¼ Sheffield-Henderson sc.), 43.4s.; 2, Jack Haslam (3¼ Douglas sc.), 47.1s. General: 1, O. B. Hodgson (3¼ Sunbeam sc.), 54.2s.

750 c.c. SIDECARS.—Same placings as preceding class.

1,000 c.c. SIDECARS.—Expert: 1, E. Searle (3¼ Sheffield-Henderson sc.), 41.1s.; 2, G. Brough (8 Brough Superior sc.), 45.4s. General: 1, A. Robson (8 Zenith sc.), 44.3s.; 2, K. S. Topping (8 Zenith sc.), 52s.

275 c.c. SOLO.—Expert: 1, G. Brough (2¼ J.A.P.), 45.1s.; 2, A. Palin (2¼ New Imperial), 59.3s. General: 1, A. Roberts (2¼ Omega), 51.4s.; 2, W. Bellian (2¼ Omega), 52s.

350 c.c. SOLO.—Expert: 1, G. Brough (2¼ J.A.P.), 45s.; 2, A. Palin (2¼ New Imperial), 54.3s. General: 1, J. Simpson (2¼ A.J.S.), 33.4s.; 2, H. Bannister (2¼ Coulson), 38s.

550 c.c. SOLO.—Expert: 1, E. Searle (3¼ Sheffield-Henderson), 33s.; 2, Reg. Lucas (3¼ Sunbeam), 37.4s. General: 1, J. Simpson (2¼ A.J.S.), 35.2s.; 2, H. B. Howson (3¼ Norton), 36.1s.

1,000 c.c. SOLO.—Expert: 1, E. Searle (3¼ Sheffield-Henderson), 32.4s.; 2, G. Brough (8 Brough Superior), 36.2s. General: 1, A. Robson (8 Zenith), 36.2s.; 2, R. Landrick (3¼ Norton), 37s.

TEAM PRIZE.—Loughborough M.C.C.

G. H. Symonds (2¼ Levis), winning his class at 32.2 m.p.h. in the Brighton and Hove M.C.C. hill-climb.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

WHO CAN TELL?

Sir,—I was looking up the various performances of the Six Days in the issue of September 15th, when I suddenly observed that the petrol consumption figures for the 3½ h.p. Scott reached as high as 98.1 m.p.g. Can anyone tell me how to attain this figure on this fascinating machine?

Reading.

SOUTHERNER.

'COLLECTING FRICTIONAL ELECTRICITY!'

Sir,—The following extract from an article on "The Modern Motor Car" (published as far back as 1894), by Wilfrid J. Lineham, M.I.C.E., M.I.M.E., M.I.E.E., may be of interest to your correspondent Mr. L. W. E. Hartley:

"I must not omit to mention the external spark gap that is now universally employed, and which I call the Panhard spark gap."

"Whether true or not, it is said that some of Panhard's workmen discovered accidentally that an external gap of ½ in., in addition to that within the cylinder, made the internal spark occur with greater certainty. The truth of the result is indubitable, so that the secondary wire is now led direct to the dashboard, and there interrupted by a suitably protected contrivance, when the driver can see if the sparking occurs regularly."

J.L.

Portobello.

Sir,—Although neither a "No. 8 hat" nor an electrical expert, may I advance the by no means original theory that the benefit obtained from an auxiliary spark gap accrues from the fact that this device insulates the secondary magneto winding from the sparking plug while the secondary current is "building up," thus preventing losses due to plug leakage, and consequently allowing a more rapid rise in potential.

W. C. WINGFIELD.

Sir,—In connection with Mr. Hartley's letter, has any serious or successful attempt been made to replace magneto ignition by frictional electricity, incorporating, e.g., a very small Wimshurst and condenser? What were the difficulties?

Reading.

SOUTHERNER.

Sir,—Under the above heading a correspondent enquires about the use of extra spark gaps in the high-tension circuit.

The claim that any such device "collects frictional electricity generated by the engine" is best described as rot, and further comment on this point is unnecessary.

But there is something in the use of an extra gap in series with the plug. If the plug should be partly short-circuited by carbon, a very low resistance path is provided for the high-tension current, and under these conditions the voltage cannot attain a very high value, as will be readily understood by anyone conversant with the theory. If the plug conditions are very bad no spark will be produced. If we now put an extra gap in series with the plug the voltage is permitted to rise sufficiently to produce a spark and the sudden oscillatory discharge is sufficiently energetic to produce a spark at the plug points as well as at the gap in spite of leaky insulation. That is the case for the gap. Against it there is much to be considered. The "amplifiers" or "intensifiers" sold usually consist of a pair of points enclosed in a glass tube. This form of gap is just about the worst possible for the purpose. The erratic behaviour of such gaps when an impulsive voltage is applied has been the subject of many papers read before various scientific bodies. It is possible for the voltage required to jump a gap of this description to

vary enormously at different instants, and its use puts an unfair strain on the insulation of the magneto, causing it to spark repeatedly at the safety gap, which is very likely to cause trouble if continued. One team of riders, who shall be nameless, spoilt all their chances in the recent Six Days Trials solely by the use of these "amplifiers."

It is not impossible to construct a gap free from the more serious disadvantages mentioned. A pair of spheres, or a ring with a wire through the centre, would be fairly satisfactory if well ventilated and kept clean; but the last two conditions are somewhat antagonistic on a motor cycle, and probably the best way out of the difficulty is to buy a good plug. Then the extra gap is unnecessary.

I enclose my card, but prefer to remain anonymous, as my hat is only

Coventry.

Sir,—With reference to the letter from Mr. Hartley asking that an opinion should be given as to the advantage of the external spark gap by some "No. 8 hat," I would suggest that if he really wants information on this subject he might buy a copy of Mr. A. P. Young's book on "Magnetos" and study it. The question is dealt with there, and the reasons why a spark gap type of distributor was adopted in many of the aero magnetos is explained.

Another course is to try for oneself. Oil up a plug well, and try whether it shorts more easily when there is an external gap or no gap.

Personally, I have found that a plug so oiled up that there was no sign of a spark with the wire coupled in the ordinary way would often spark quite well if the high-tension wire was held ½ in. from the terminal. I have also found that if for any reason the engine was liable to oil up its plugs, it would run far better with an external gap. Last summer I was running an engine of experimental type in which the lubrication was defective, and, in consequence, there was great difficulty in preventing the plugs oiling up. This was completely got over by introducing external spark gaps.

F. STRICKLAND.

*Published by Iliffe and Sons, Ltd., 20, Tudor Street, London, E.C. 4.

This is the Cumberland County M.C.C. team that has for the second year in succession won the club team prize in the Scottish Two Days Trial. The riders are: W. T. Tiffen (2½ Velocet e), R. L. Williamson (3½ Norton), and W. B. Anderson (4 A.J.S.)

SUNDAY COMPETITIONS.

Sir,—I should like to endorse heartily the opinion of Mr. F. Rayner.

With all due respect to Mr. Dovener—whose letter, in my opinion, hardly savours of a truly sporting tone—I think it very unfortunate that our clubs cannot organise a satisfactory trial in the time they have on hand after Saturday midday. Moreover, I am sure that by far the majority of club members could give the whole of Saturday to this purpose if this were the rule.

I am a motor cycling enthusiast, and venture to call myself a sportsman; but give me the Sunday worth calling a Sabbath.

M. E. MILES.

TYRES, EX-W.D., EXPERIENCES WITH.

Sir,—For some months past your advertisement columns have been particularly full of advertisements dealing with cheap tyres, variously designated "Ex-W.D.," "Clearance," etc. I think it would be of interest to learn your readers' general opinion of these goods. My own experience in the matter persuades me that they are rather in the nature of a "lucky dip," and on the whole to be avoided.

My first experiment was with an American cover, 26x2½ in. It was still in the original wrapping and appeared perfectly sound and fresh. After 500 miles running the canvas was showing through the tread, not all the way round, but for about half the circumference.

Next, I tried an English cover, 700x80 mm., extra heavy pattern. This, too, appeared quite fresh, and was in the original wrappings. After its first run of 150 miles, I noticed several long cracks in the walls, particularly near the head and around the raised letters of the makers' name. The rubber in these places did not seem to be satisfactorily bonded with the canvas; it could be peeled away without much difficulty. A friend of mine had one of the same make, which was completely worn out in five weeks' normal use.

I should like to state here my appreciation of the fair dealing and courteous treatment I received from the people at the Central Garage, Thornton Heath, from whom I purchased the last mentioned cover. I wrote informing them of my bad luck, but scarcely expected them to accept any responsibility for a "clearance line" article. I was agreeably surprised when they offered to exchange it for another of different make free of all charge. The cover I have from them now is giving very satisfactory service, showing, I think, that cheap covers are rather a matter of luck.

I have no connection or interest in the above concern except that of a client who appreciates a

Stafford.

FAIR DEAL.

INTERNATIONAL RECOGNITION OF THE LIGHT-WEIGHT SIDECAR.

Sir,—Under this heading, in your issue of September 1st, Mr. E. H. Humphries, of Messrs. Humphries and Dawes, has commented upon the decisions taken at the congress of the F.I.C.M. held in Geneva on August 8th, and has especially asked for explanations which he thinks I can give as having been in the chair at the said congress.

The minutes of the meeting having not yet been circulated to the different associations, it is hardly possible to give a detailed account of the discussion which took place when Mr. Ebbelwhite introduced the motion of having the 350 c.c. sidecar class reintroduced into the F.I.C.M. regulations after its elimination only a year ago.

—All I can state at present, and without the minutes before me, is that sidecar outfits of 350 c.c., and even of 500 c.c., have not proved a success in any of our mountain districts of which we have knowledge. In Switzerland, all sidecar machines up to 500 c.c. have had to be used very carefully and gingerly, and have not given entire satisfaction to their owners when they used them for mountain touring.

The congress therefore, after careful deliberation, considered that it would be unwise to foster, by racing and consecutive publicity, a type of machine which, in actual touring use, would not give entire satisfaction.

So far as I am concerned, I am well aware that, with the wonderful development in power of small size engines, conditions have materially changed in favour of reduced cylinder capacity. Unfortunately, small size engines are generally fitted to light or medium-weight frames, which do not seem adequate for carrying sidecars on which very often two or three passengers may be conveyed, as Mr. Humphries must himself admit just by contemplating page 203 of *The Motor Cycle* of September 1st (the same page on which his letter appears).

JULES NEHER,

President of the Swiss Motor Cycling Union.

Geneva.

UNINTERESTING SPEED EVENTS.

Sir,—At the last meeting of the Norfolk M.C. and L.C.C. a number of our members expressed their surprise at the remarks contained in the report on our open speed trials published in your journal, and I am requested by my committee to write you on the subject.

At the dinner held after the trials, the Assistant Secretary of the A.C.U. (who acted as A.C.U. steward at the meeting) expressed in most emphatic terms his entire satisfaction of the way in which everything had been carried out, and congratulated the club on its undoubted success. Considerable

Two well-known solo riders in the successful English team in last week's International Trial between Holland and England. H. R. Davies (2½ A.J.S.) and W. B. Gibb (2½ Douglas), followed by two of the visiting team, at Malvern.

C. F. Temple, in the opinion of many Brooklands habitués, one of the three best track riders in this country, has named his Harley-Davidson "Mutt." He is seen here being congratulated after breaking eight records.

importance was attached to this gentleman's kind remarks, knowing that he had been present at a vast number of similar meetings before. Moreover, as you know, a number of the competitors were men whose names are famous in the racing world, and who should therefore be most critical judges of the success or otherwise of a speed trial. They were also in unanimous agreement as to the unqualified success of the meeting.

Your representative's remarks upon the number of classes is not quite accurate as to facts. There were only eighteen classes and not thirty-four. The fact that the club members' times were taken as well as the open competitors' times in each event did not prolong the meeting in any way whatever, and the fact that members took prizes in each class as well as open competitors did not make that event into two classes. I wish to point out to you that the whole organisation of this meeting, which involved untold hours of work, was carried out entirely by members of the club on an honorary basis, purely for the sport it involved. *Hinc illæ lacrimæ.*

R. A. LOWER,

Hon. General Secretary Norfolk M.C. and L.C.C.

[In reviewing the Norfolk Club's speed trials, we pointed out that the meeting was unwieldy and monotonous, from the spectator's point of view, with such a lengthy list of classes. We agree that the organisation, as well as the entry list, were first-rate. The subject of uninteresting speed trials was discussed in a leading article last week.—Ed.]

WHICH IS THE FASTEST NORTON MODEL?

Sir,—With reference to "Inquisitive's" letter in your issue of September 22nd, we should like to explain that the Brooklands Special and the B.R.S. engines are specially tuned and built with one end in view—power development—without which speed is, of course, impossible.

Upon completion in our works, these engines are sent in batches to Brooklands, where they are checked over and tuned by Mr. O'Donovan and his staff. After a few preliminary laps, they are officially timed over the "kilo," and a certificate of the individual performance of each engine is issued by the authorities. This certificate states that the engine has exceeded speeds of 70 and 75 m.p.h. as the case may be, and is signed by the track superintendent. After this the engine, exactly as when certified, is returned to our works and fitted either to a countershaft model 16H or direct belt drive model No. 9, and, after passing a short road test, is ready for despatch.

"Inquisitive" enquires whether the machines ridden by Mr. V. Horsman (when he finished first in the 500 mile race at Brooklands) and Mr. H. Hassall (when he won the Belgian Grand Prix) were standard 16H models. In both cases, the engines were standard and uncertified, tuned entirely by the respective riders. In this connection, we should like to point

out that every standard model 16H is capable of being tuned to speeds to equal the Brooklands models provided the owner has the necessary tuning ability and riding skill.

The material used in all engines, whether certified or otherwise, is identical; but, while the standard engine is capable of being tuned for record speeds, the B.S. and B.R.S. have actually accomplished the speeds which are stated upon the Brooklands A.R.C. certificate, which is supplied to the purchaser of the machine.

For NORTON MOTORS, LTD.,
W. J. HASSALL.

Sir,—In reply to your correspondent "Inquisitive," as to which is the fastest Norton model, if he would read carefully the Norton catalogue it would impress even his lay mind that the B.S. engine is certainly the fastest.

This does not mean to say that the other engines they turn out have not the possibilities of equalling or exceeding the speed of the B.S. engine, but the certificate given with the B.S. engine is a guarantee that the engine has actually exceeded 75 m.p.h.

As the writer of the advertisement offering to tune up a $3\frac{1}{2}$ h.p. three-speed model to do 75 m.p.h., may I correct "Inquisitive," who seems to have got the impression that no charge would have been made for this? As a matter of fact a charge was made after our customer had purchased his machine. This was not a big charge, as this particular engine was exceedingly fast when we received it from the works, and the time involved in tuning was very little.

Although our customer has now an engine which he actually witnessed doing 75 m.p.h., he has not a certificate in his possession to show an intending purchaser any time he wished to dispose of the machine.

That is the difference, "Inquisitive," and if you have sufficient tuning knowledge, believe us, you can make a Norton do over 80 m.p.h.

BULLOUGHS MOTORS, LTD.
L. MITCHELL.

SUMMARY OF CORRESPONDENCE.

F.E.W. valve attachments fitted to a fairly old J.A.P.-engined Enfield are enthusiastically praised by Mr. W. R. Burnett.

Complaining that few makes of motor cycle are really suitable for winter riding, "Splash" pleads for the more general adoption of protected transmission and all-black finish à la Sunbeam.

"W.B." (Stafford) comments on the over-zeal of the Slough police, who recently successfully summoned a youthful rider of a lightweight for exceeding the local speed limit immediately after making a strenuous push start.

Each and every week we receive dozens of letters commending the service of various makers and garages. Recently there has been an appreciable increase in the numbers of these unsolicited testimonials.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

MOTOR CYCLES AND HOW TO MANAGE THEM
The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

HINTS AND TIPS FOR MOTOR CYCLISTS.

New Edition. Just Published. Price net, 2/- By post, 2/3.

TRACING MOTOR CYCLE TROUBLES.

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

MOTOR CYCLE REMINISCENCES.

By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/4.

THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Look post, 5/10. Set of Two Maps—England and Wales, London (as above). Price net, 4/6. By post, 4/3.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4., or of leading Booksellers and Railway Bookstalls.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

HILL-CLIMBING FORMULA.

Can you supply me with a formula for hill-climbing competitions?—E.L.H.

The formula invariably recommended by *The Motor Cycle* is $\frac{C \times T^2}{W}$. Where C =

capacity in c.cm., T = time, W = total weight. The lowest figure wins.

FITTING OVERSIZE TYRES.

I am desirous of fitting 28in. x 3in. tyres on 26in. x 2 1/2in. rims. (1.) How much will the distance be from the rim to the circumference of the tyre? (2.) Are 28in. x 3in. tyres extremely liable to roll off either in cornering or at speed (40 m.p.h.) on a sidecar outfit? (3.) What size of tube do you recommend with these tyres? (4.) Do you recommend security bolts with these tyres?—A.E.L.

(1.) The distance will vary according to the makes of tyres and the pattern of the tread, but in most cases about 3in. (2.) There is very little danger of this happening. (3.) 28in. x 3in., although 26in. x 2 1/2in. may be used in an emergency. (4.) Security bolts may be necessary; it is rather a matter to be decided by experience.

FINE SERVICE FROM HUB GEAR.

About 14,000 miles have been covered on my 1913 Triumph, which is fitted with a Sturmey-Archer three-speed hub gear, and the latter has never given trouble. (1.) Is it now likely that the gears will suddenly go wrong, and, therefore, would it be advisable to have them overhauled, or should I let well alone? Although the gears still change properly, there is rather more backlash between the wheel and the belt drum than there used to be. (2.) At times, when in top gear, there seems to be a certain amount of "slip," although I inject thin oil frequently. Is this a sign of wear?—W.A.C.

(1.) The distance of 14,000 miles without trouble from your three-speed hub gear is very satisfactory. As the gears still appear to be working properly, it scarcely seems necessary that they should be overhauled. The backlash between the wheel and belt drum is due to wear, and may be disregarded if it is not excessive. (2.) The slipping on top gear is no doubt due to wear of the clutch plates, or weakening of the clutch springs. If it interferes with hill-climbing, new clutch plates or new springs should be fitted.

REMOVING BACK PRESSURE.

I have a 1912 single-cylinder machine with silencer fitted across the frame under the magneto. If I run the machine with the cut-out shut it will not pull at all.

Will any improvement be felt if I fitted an exhaust pipe direct from the cylinder without going through the silencer at all? I see that many racing men favour this arrangement.—L.R.O.

An exhaust system which does not allow the gases to pass through an expansion chamber does not comply with the law. We would advise you to close permanently the cut-out on the existing silencer and replace it with an extension pipe. Special fittings for this purpose can be obtained.

PROS AND CONS OF PETROIL.

What are the chief points, good or bad, of the petroil system of lubrication with a two-stroke engine?—NOVICE.

The chief objection to the petroil system of lubrication arises from the amount of dirt which collects on the carburettor and petrol supply system generally, as a result of slight leakages, which are usually present but unnoticed until oil is mixed with the petrol. There are really no mechanical objections to this system, which is decidedly economical, simple, and quite efficient, especially in the case of roller bearing engines.

MAGNETO QUESTIONS.

I have a 6 h.p. twin and the engine is difficult to start. I think the trouble is in the magneto. I have had it disconnected, and find that I cannot get a spark in the fully retarded position, whereas I can nearly always in the fully advanced. Also that by withdrawing the cam ring clear of the peg which limits the advance, and advancing still further, I can get a good spark for another 3in. circular motion of cam ring. It looks as if the slot limiting the travel of the cam ring is cut not quite in the best position relative to cams and armature. Will you answer the following: (1.) How can I verify that contact is breaking in the best position for the armature? (2.) Why is the vulcanite slip ring made V shape? Is there any other reason but to keep oil or grease from creeping on the contact surface? (3.) Would any damage to windings, condenser, etc., occur if I fitted an extra magnet outside the present one to intensify further the permanent field?—G.E.

(1.)—A rough way of verifying whether the contact breaker points separate in the most favourable position of the armature is to rotate the latter by hand until the position of maximum resistance is felt. At this position the contact breaker points should be just separating in the fully advanced position. (2.) The V shape of the slip ring not only tends to protect the segments from oil or grease, but also the large area of non-conducting surface offers greater electrical resistance to leakages of the high-tension currents. There is absolutely no object in fitting extra magnets, and if you suspect that the present ones are weak it will be best to return the magneto to the makers to be remagnetised.

Important Dates.

Sat., Oct. 8th—B.M.C.R.C. Championship Meeting, Brooklands.
Sat., Oct. 8th—Woolwich, Plumstead, and District Open Reliability Trial.
Sat., Oct. 8th—The "Scott" Trial in Yorkshire.
Fri., Nov. 4th, to Sat., Nov. 12th—Automobile Exhibition, Olympia and White City. (See "The Autocar.")
Sat., Nov. 5th—Midland Centre A.C.U. Open Reliability Trial.
Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.
Sat., Dec. 3rd to Tues., Dec. 13th—Brussels Show.
Sat., Dec. 31st.—N.W. London M.C.C. Twelve Hours Open Winter Trial.
Fri., Jan. 27th, to Sat., Feb. 4th, 1922—Scottish Car and Motor Cycle Show.

SIDECAR ALIGNMENT.

I have just bought a 1915 8 h.p. Matchless outfit, and it is in good running order, but steering requires some effort, as there is a distinct tendency for the steering to pull into the sidecar, i.e., to turn to the left, even when running on the right-hand side of the road. What is the cause of this?—G.J.D.

Probably the sidecar is not correctly aligned; the sidecar wheel should be parallel with the rear wheel of the cycle. See "Motor Cycles and How to Manage Them." Steering is usually improved by adjusting the motor cycle so that it inclines slightly away from the sidecar. You will find that so adjusted the steering is much easier than when the machine is quite vertical. If this does not effect a cure, adjust the sidecar so that its wheel runs in about 1/2in. towards the front of the machine.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"F.F." (Stratford-on-Avon).—28×3in. tyres, W.S.R. variable jet, and Bowden extra air inlet on 4 h.p. Triumph.

"A.M.H." (Cumberland).—A.B.C.: General capability as a sidecar machine with passenger and luggage in a hilly district, speed, reliability, and consumption (both solo and sidecar).

"H.J.H." (Reading).—6 h.p. British Excelsior-Jap (Popular model) sidecar outfit: General reliability, speed, consumption, and ease of starting.

"C.A.I." (Blackpool).—7 h.p. A.J.S. sidecar: Petrol consumption with Binks carburetter, most suitable combination of jets, and oil consumption.

"D.P.T." (Ilford).—7.9 h.p. electric model Harley-Davidson sidecar: Speed and general reliability, petrol consumption, tyre mileage, controllability in traffic (chain snatch at speeds below 20 m.p.h. on top), and amount of attention necessary to engine (particularly valve gear).

"S.H." (Bootle).—A.J.S., Royal Ruby, and 6 h.p. B.S.A. sidecars: General experiences.

"L.R.G." (South Woodford).—3½ h.p. 1921 Rudge Multi: Speed, reliability, suitability for use in London traffic, steering, and effect of fitting special overlap cam.

"G.T." (Bermondsey).—Burlington clutch conversion sets for 4 h.p. Douglasses: General experiences.

"C.T.P." (Northwood).—3 h.p. Royal Ruby: Comfort, speed, reliability, and brakes.

READERS' REPLIES.

LAPPING IN PISTON RINGS.

Under the above heading, in your issue of the 22nd ult., you, grudgingly, it is true, explain to "H.A.B." how to lap in his piston rings. Will you permit me to say that in a life experience of engineering shop practice this is something I have never permitted to be done. Some firms even go so far as to prohibit the polishing of cylinder bores, but insist that they shall be left as finished by the tool or the grinding wheel. The reason for this is that the abrasive used becomes embedded in the walls of the cylinder, from which it is practically impossible to remove it. Further, unless very skilfully done, the process would not result in a parallel or round bore. It is probable that the cylinder in question has distorted. It is commonly known that, unless the cylinder castings are seasoned or annealed before the finish boring operation, there is a liability to distort in the first hundred miles or so; but, once corrected, this rarely occurs. "H.A.B." would be well advised to get the cylinder reground by a reputable firm. If the piston rings he fitted were of a well-known make, it is very unlikely that these caused the trouble. Rings are so made that they give a uniform pressure all round the cylinder wall, either by turning to a special shape or by turning cylindrical, and, after cutting, being rolled or hammered on the inside to give them the necessary spring, and, finally, being

ground in a special fixture to the exact size of the cylinder they have to fit. If your correspondent has to use crudely made rings, his better course would be to smear the cylinder walls lightly with Prussian blue, insert the rings in the piston, and push them up and down in the cylinder a few times, when the high places will be marked, and can then be very carefully filed off. This, however, is not a practice to adopt where properly made rings can be obtained.—ENGINEER.

A KNOCK AT SPEED.

Having read "A.R.H.B.'s" and other readers' experiences of the above, may I venture to give my own? After my machine had been running quite well, I started up (from cold) without any obvious change in the engine. As soon as I changed into top gear, a most alarming rattle began, and I thought that the big end was swinging about free in the crank case. I immediately shut down, when the rattle disappeared. On opening out again it commenced anew. On dismantling everything seemed O.K. The piston ring slots were cleaned out (I do not use a bottom ring), bearings tightened up, and the little end rebushed. I thought it might be piston slap, as my piston is very loose in the cylinder. On taking the 'bus on to the road it gave a few bangs and a rattle or two, and the flywheel came off. The flywheel key had sheared, and I found that so long as the key touched the flywheel anywhere the engine rattled badly when going all out, although it sometimes reached 30 m.p.h. before doing so. It was not through heat, as "Gudgeon Pin" states, for when riding normally I can leave my hand on the cylinder for several moments. A friend had the same trouble, which he cured by packing the taper on the shaft with copper foil.—FLYWHEEL.

I should like to add a few words to what has already been written on "two-stroke rattle." Having done most of my riding upon Villiers-engined machines, I cured the trouble in the following

manner. In both the instances I am citing, the noise was caused, as "Gudgeon Pin" states, by the piston, but not through this "drying up." I found in both cases that the sides of the baffle had become shiny by contact with the cylinder wall, presumably that part above the point reached by the top ring at top dead centre. If this baffle is filed all the way round its circumference so as entirely to clear the cylinder wall, and if the rings are not allowed to stick or burn into their grooves, I am confident that a complete cure will be effected. When filing the baffle every part of the piston above the top ring must be given full clearance—at least .025.—OE 1382.

SPARKLETS.

British Success in Denmark.

In the twenty-four hours pair-race at Zealand, Denmark, September 17th and 18th, Rasmussen (on a Rudge) and his partner Olsen (on a Wooler) finished as first pair in their class.

To Owners of Pre-war Machines.

Owners of machines with hub gears are well catered for by the Cromwell Engineering Co., 327, Putney Bridge Road, London, S.W.15. This firm issues a useful series of "hub gear hints," and is now marketing a special oil (in tins) for these gears.

Found.

On Saturday, the 24th ult., Mr. Heritage, 59, Bourne Road, Stoke, Coventry, found a brake pedal on the Warwick-Leamington road.

Between Bidford-on-Avon and Honeybourne Station, Mr. Geo. Mannell, Brandon Villa, Honeybourne, Worcs., found a new sparking plug.

Mr. Harold Ainsworth, 4, Victoria Road, Penketh, near Warrington, wishes to return a pair of gloves left behind by the driver of a Rex sidecar on the Liverpool Road, Bold, on the 25th September.

A 20 H.P. MOTOR CYCLE.

This machine, obviously useless except in its particular sphere of work which is cycle pacing on the track, has points of interest, however. Observe the auxiliary exhaust ports, and the enormous pulley, giving a gear ratio of 1½ to 1.

MOTOR CYCLE DEVELOPMENTS IN GERMANY.

Motor-assisted Bicycles Popular with Manufacturers. An Aluminium Narrow Angle V Twin: Several Flat Twins.
A Single Track Runabout for Two.

HIGH petrol costs and heavy taxation have had an important influence on German motor cycle design, as could be plainly seen in the models exhibited at the first Berlin post-war motor show last week. During the war our late enemies made little or no use of motor cycles, and there was consequently no development of design. With the return to peace conditions, they had to face heavy taxation and particularly high fuel costs, for although home-produced benzole is used to a considerable extent, American petrol is also necessary, and is very costly to the German, whose mark is only worth an American cent.

Because of these conditions, the German industry has turned towards the motor-assisted bicycle. In the Kaiserdamm Palace, a huge hall erected on the western suburbs of Berlin specially for motor shows, there is every conceivable variety of motor-assisted bicycle. And the German engineers appear to have taxed their brains to discover in how many different positions they can mount these little engines in an ordinary bicycle frame. They are in front, behind, on top, at the bottom, placed at all angles, and drive by belt, chain, and friction pulleys. The motor wheel type is favoured by the Opel Co., one of the biggest manufacturers of cars and bicycles, while the numerous other and smaller firms prefer to attach the machine to the bicycle frame. There is only one exception in the L.F.G. made by a firm which acquired some notoriety during the war as a manufacturer of aeroplanes, which has a motor wheel trailing behind, and which pushes the bicycle.

Under-powered Invalid Carriages.

In several cases these small engines are fitted to tricycles and four-wheelers for invalids and wounded soldiers; but some of the engines are so tiny that they must be inadequate for the work they are intended to perform.

No motor scooters were seen on the streets of Berlin, or indeed of any German city; but evidently it is believed that there is a future for them, for their construction has been taken up by the great

A German flat twin motor cycle, the engine of which closely follows British lines, while an American type front fork is fitted—the Deutsche Werke.

Krupp firm. In design, it is difficult to find any difference between the product of this great German gun factory and

Bergmann aluminium engine with steel liners, cast iron cylinder heads, and direct-operated o.h. valves. From this view of the engine it is difficult to appreciate that it is a V twin.

some scooters which have been imported from America.

The German motor cycle industry is very much smaller than that of England,

and the superiority of the home country is revealed in the adoption of British exclusively German, and where even the indirect products of foreign countries can be counted on the fingers of one hand, it is counted on the fingers of one hand, it is interesting to find the English Triumph two-stroke, presumably built in Germany under licence. On the whole, however, German engineers do not show a great deal of enthusiasm for the two-stroke.

The two German firms best known outside their own territory in pre-war days—N.S.U. and Wanderer—do not present machines with any new features of design, construction evidently having been taken up just where it was left off in 1914. Some of the really big factories, however, do not despise the motor cycle. As an example, the B.M.W., a company which developed a huge factory at Munich for the production of aviation engines, is specialising on a flat twin of very up-to-date design, built in various sizes for motor cycles and cycle cars. Labour costs being low in Bavaria, and the value of the mark having shrunk enormously, a unit such as this might be a serious competitor on foreign markets. As to the complete machines, there is not very much to be feared from them, for although they have the advantage of low price when placed on a foreign market, they are, generally speaking, not equal to the British product.

An Aluminium Engine.

Another good unit for assemblers is the Bergmann, a V type with aluminium cylinders, having steel liners and vertical overhead valves directly operated by an overhead camshaft, no gear being used between the cam and the valve stem. This engine has a cast iron detachable head, and is built as a unit with the change-speed gear. It is the work of one of the most reputed German engineers, and is undoubtedly a fine piece of work.

As an example of a good class 500 c.c. machine, with a powerful company behind it, the Deutsche Werke flat twin is interesting. This is produced in the former Government munition factory at Spandau, and is evidently the work of

The Mars flat twin with box frame of unusual construction.

The Bergmann narrow angle V twin with integral gear box. It is constructed of aluminium.

an engineer who has closely studied British design. The engine is a flat twin, recalling the Douglas, with vertical inlet valves, the rocker arms of which are enclosed in a metal box with hinged cover. Without having any startlingly novel features, it is a smart job.

The Mars machine, another flat twin, is original by reason of its box frame. The engine, which is one of the most powerful to be found in the show, has no unusual features of design, being a flat twin of 80×95 mm., with horizontal side-by-side valves. All chain drive is used, there being two chains from the countershaft to the hub sprockets, protection for them being afforded by the box frame. Rear mudguarding is very adequate, the valances completely covering the upper half of the wheel. The guard can be taken off as a unit, and the wheel removed, leaving the chain sprockets in position. This machine is sold with a two-seater sidecar, the seats being in tandem, and, in accordance with the general rule in German car construction, the hood is concealed.

Belt Drive.

The Victoria machine is fitted with the well-known B.M.W. flat twin of 68×69 mm. bore and stroke. One of the features of this engine is a crank case forming an oil sump, with pump circulated oil supply to the main and the connecting rod bearings. Contrary to the more general German practice, final drive is by belt, instead of by chain, for both primary and secondary drives.

The Deutsche flat twin engine, which is very reminiscent of British design.

One of the novelties of the show is the Megola, with five-cylinder rotary engine built in the front wheel. This machine has already been described in *The Motor Cycle*. The cylinders, which, naturally, have all their rods connected up to one crank, have a bore of 52 mm. with a stroke of 60 mm., the general principle of construction being like that of the well-known Gnome aviation engine. A pressed steel open frame is used, with semi-elliptic springs for the rear; this type of construction gives a rather long wheelbase. Instead of the usual saddle there is a comfortable-looking armchair, the back of which is combined with the mudguard over the rear wheel.

Another armchair motor cycle is the Lomos, which has an open tubular frame and only 20 in. wheels. An armchair is mounted in the place of the usual saddle, and immediately below the rider's legs is a single-cylinder air-cooled two-stroke engine of 55×60 mm. bore and stroke.

Single Track Runabout.

If our recollections are correct, the Mauser is the revival of an idea put forward in America several years ago. The machine is an ordinary type motor cycle with rather lengthened wheelbase, driven by a B.M.W. engine, and having a car type body built on this frame. There are two seats in tandem, and in addition to the two ordinary wheels a central axle with a small diameter wheel at each end. When standing, or running slowly, the axle can be dropped, allowing the wheels to come in contact with the road, but when running normally the axle is raised, and the machine runs just like an ordinary motor cycle. The flat twin engine, being placed fore and aft in the frame, is particularly well suited for this type of motor cycle. It is carried under the floorboards, beneath the passenger's feet, and is invisible from outside. There are openings in the body to allow of a cooling draught.

A single track runabout—the Mauser—demonstrated at the German motor show. For years our late enemies have endeavoured to produce a motor bicycle having most of the advantages of a car. Observe the small steadying wheels.

ANOTHER SPORTING MODEL BIG TWIN.

Rigid Frame 8 h.p. Matchless, for Fast Solo Enthusiasts, to Sell at £130.

IT is gratifying to note that manufacturers are taking serious notice of the fact that there are very few British big twin machines on the market suitable for solo riding. One of the latest manufacturers to recognise the demand for a powerful, sporting solo machine is the firm of Messrs. H. Collier and Sons, Ltd., 44, Plumstead Road, London, S.E.18, who, in the Model J Matchless, have produced a comfortable and powerful mount, fit for serious touring not only in this country, but overseas, where high power is often necessary through the heaviness of the roads.

The engine used is either a 7 h.p. M.A.G. (82 mm. x 94 mm. = 996 c.c.) or an 8 h.p. J.A.P. (85.5 mm. x 85 mm. =

976 c.c.). The frame is a modification of that supplied to the sidecar model, the rear portion being rigid. The transmission is by chain, the front chain being totally enclosed, while the rear chain is protected by means of a guard. So far as the gear box is concerned, this is identical with the sidecar model, and the arrangement of the kick-starter, which raises the exhaust valve, is retained, there being no exhaust valve lifter on the handle-bars. The gear ratios are 4.1, 7½, and 10½ to 1.

A front rim brake is fitted to the front wheel, but a contracting hand brake may be fitted to order if desired, while the rear brake is of the internal expanding pattern, actuated by a pair of pedals so

that it may be applied by either foot. The usual type of Matchless clutch is fitted, and this may be actuated either by the heel and toe pedal, which has long been a feature of Matchless motor cycles, or by a lever on the handle-bar. Foot-rests instead of footboards are supplied, while 28 x 3 in. tyres are a standard.

The Model J is intended not only to be a sports model, but also a double-purpose mount, and lugs are provided for the fitting of a sidecar. Considerable improvement has been made in the handle-bars, but the exact pattern of these has not yet been finally decided. It is hoped to place this model on the market for £130, and deliveries will begin in November.

We tried the machine, and found it to be particularly well balanced and extremely comfortable, while owing to the fitting of a very large expansion chamber and a long exit pipe the engine is beautifully quiet. Needless to say, it has wonderful acceleration powers, steers remarkably well, and is capable of a high turn of speed. Tried on the steep hills in the Woolwich district, it made light of these on top gear, could be slowed down to a walking pace, and rapidly accelerated on a gradient of 1 in 12 or worse. As a competitor to the Americans, the new Matchless must be seriously considered.

A sporting big twin for solo riders, the new Matchless model with a rigid frame.

RE-INTRODUCTION OF SIMMS MAGNETOS.

THERE is no name more intimately connected with magneto manufacture than that of Simms, for, eighteen years ago, Mr. F. R. Simms introduced the high tension magneto to the world, thereby conferring an enormous benefit upon the motor cycle movement that is even now not fully realised.

One Size Only.

Simms motor cycle magnetos were extensively manufactured before the war, but since that date the company has devoted its attention chiefly to the supplying of magnetos to industrial motors and now has these standardised on Leyland and Thornycroft lorries. At the present time, however, the manufacture of a motor cycle magneto has been resumed, and Simms magnetos, made in one size only, but in types suitable for single cylinder engines, flat-twin engines

A British magneto, well known a decade ago, the Simms, which has been re-introduced in a thoroughly up to date form.

and V-twin engines, are again available. So far as design is concerned this follows absolutely standard and tried practice, there being no special features to mention concerning the construction of the magneto. It goes without saying, however, that the finest workmanship and material are employed; whilst eighteen years' experience of magneto manufacture ensures the Simms magneto being a thoroughly reliable article. One point in which the new Simms magneto is said to excel is its good spark at very low speeds.

Good Spark at Slow Speeds.

Sparking in air at from 70 to 80 revolutions per minute, a spark length of 5.5 mm. is obtained. Simms Motor Units (1920), Ltd., Percy Buildings, Grove Street, Rathbone Place, London, W.1, is the address of the makers.

CHEAPER MOTOR CYCLES IN 1922.

THERE is every indication that motor cycles in 1922 will be much lower in price than during the current year. Many of the manufacturers are not waiting for the Olympia Show to announce their reduced figures, but are issuing them at once. In last week's issue were published the Triumph prices

for 1922, and this week we are able to give several more 1922 programmes.

Ivy lightweights now range from £64 for the 2½ h.p. model with two-speed gear, clutch and k.s. to £102 for the sidecar.

The New Imperial range begins with the 2½ h.p. Light Tourist three-speed at £63, and ends with the 8 h.p. sidecar

outfit at £145. The sports model 2½ h.p. three-speeder with clutch is £80. For 1922 the Rudge Multi 3½ h.p. model remains at £85, but the three-speed models have been considerably reduced, £100 being the price of the 3½ h.p. model (£120 with sidecar), and £120 for the 7-9 h.p. twin (£150 with sidecar).

A WELL-TRIED GEAR BOX.

New Burman Lightweight Three-speed Box, weighing only 20 lb.

AFTER most searching tests, in which thousands of miles of road work were included, the Model E Burman gear box is now launched on the market. Our readers will remember that this gear has been used successfully in the Junior Tourist Trophy Race and in most of the big reliability trials of the year, so that there is little doubt of its soundness both in detail and general design.

In construction it is simple, robust, and of excellent workmanship; constant mesh gears are employed throughout, dog clutches being used to lock the gear wheels to their respective shafts as required.

With regard to constructional details, the mainshaft runs on double ball bearings, a long bronze bush being used for the spigot bearing. The layshaft is stationary, and the sleeve carrying the gears revolves on ample bronze bushes. No loose keys are employed, the shafts being splined and the pair of gears for the introduction of the intermediate ratio are connected by a double fork plate and slide together.

Independent Gear Location.

Normally, the middle gear wheel revolves freely on the layshaft, but when the intermediate gear is required it is locked to the sleeve by an overhanging dog. Top and bottom gears are engaged

by dogs, the middle gear wheel on the main shaft being moved laterally to its extreme position in either direction in order to effect the engagements.

The striking gear is exceedingly simple, and a neat and substantial locking device is incorporated in the box. This consists of a toothed quadrant locked by a spring-controlled ratchet arm, and this alone is sufficient to locate the gears without the external quadrant.

Optional Control Levers.

Either a tank rail gate or a saddle tube quadrant can be supplied, and in each case it is practically impossible to miss a gear position owing to the effective

Middle gear is engaged by means of overhanging dogs.

design of the quadrant. The seven plate cork insert clutch is particularly interesting in that the corks are not of the usual circular section, but are so arranged as to present the greatest possible friction surface. When the clutch is withdrawn the chain wheel runs freely on two ball bearings.

Incorporated with the chain wheel is a very simple form of shock absorber. Large holes are cut in the sprocket and filled with rubber rings, the drive being conveyed through the rubber to steel bushes mounted on the driving pegs. This refinement is unusual and relieves the motor cycle designer from the necessity of incorporating any further shock-absorbing device.

The box, which is admirably constructed in every detail, is interchangeable as regards

(Left) Specially shaped cork inserts in the clutch to ensure the greatest possible friction area. (Right) Rubber blocks are inserted in the chain wheel to absorb the transmission shocks.

belt and chain line and bracket fixings with other proprietary gears, and the kick-starter is of sensible proportions and unlikely to fail under the most severe treatment. In spite of the robust construction of the gear, which we are informed is up to the work of most 500 c.c. machines, the total weight is only 20 lb.

Intended for Lightweights.

This new gear, which is intended for the increasingly popular 2½ h.p. machine, is an important addition to the standard Burman lines which have already found their way into public favour by means of their genuine merit and sound construction.

The novel saddle tube quadrant which may be supplied as an alternative to the tank rail gate.

Cut away view of the Burman lightweight three-speed gear box, showing the simple internal locking device for positioning the gears.

THE POPULAR MOTOR CYCLE.

Over 94,000 Increase of Motor Cyclists in Twelve Months.

ACCORDING to the Ministry of Transport, the number of motor cycles licensed from January 1st to the end of August amounts to 373,200, bringing in a revenue of £875,700. This is averaged at £2 7s. per motor cycle.

Compared with the figures issued, showing the position at the end of May, motor cycles have increased by over 3,000 and private cars by 16,500. The total revenue obtained from motor taxes (exclusive of miscellaneous items and horse-drawn hackney carriages) is £9,276,000 made up as follows:

	Number.	Tax receipts. £
Motor cycles	373,200	875,700
Private cars	242,500	3,981,000
Invalid vehicles ..	312	78
Commercial cars ..	128,200	2,639,300
Road locomotives ..	2,650	65,000
Motor ploughs	13,000	3,250
Motor tractors	1,520	23,200
Motor hackneys	82,800	1,593,500
Tramcars	15,200	11,400

It will be seen that motor cycles on the road exceed private cars by over 130,000, and are an easy first in point of numbers, while the increase during 1921

over the 1920 figures is greatly in excess of any other type of vehicle. 94,600 more motor cyclists have paid taxes this year than last year's number, while the increase in private car owners is 56,800. The increase in the two types of vehicles is shown in the following figures:

	1919-20.	1921.	Increase.
Motor cycles	278,600	373,200	94,600
Private cars	185,700	242,500	56,800

Of the total road receipts of £9,876,105, England and Wales have contributed £8,777,863, Scotland £888,227, and Ireland £210,015.

Times to Light Lamps.

Oct. 6th	...	6.27 p.m.
" 8th	...	6.22 "
" 10th	...	6.17 "
" 12th	...	6.13 "

Number-plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

The Paris Salon.

The Paris automobile salon, opened yesterday (Wednesday). Our next issue will contain an illustrated review of the motor cycle exhibits by members of *The Motor Cycle* staff.

H.M. the King and the Car Show.

His Majesty the King has been graciously pleased to grant his patronage to the International Motor Exhibition which will take place at White City and Olympia from November 4th to 12th next.

A Hectic Ride.

We think it will be a long time before the forty odd motor cyclists who competed in the Anglo-Dutch Trial will forget their ride across London to Chingford on their way to Harwich from Thames Ditton. London traffic is very demoralising to those unaccustomed to our rule of the road.

Next Saturday's Varied Programme.

All tastes in competitions are catered for by the important events on Saturday. There is the Woolwich, Plumstead, and District M.C. open reliability trial for those who want a comparatively straightforward run; there is the Scott trial in Yorkshire for the man who likes it rougher; and there is the championship meeting of the B.M.C.R.C. at Brooklands for the aspirant to speed honours. There are also one or two "centre events," two of which, in the Midland centre (the Red-ditch trial and the Sutton Coldfield hill-climb at Penkridge), would probably have been better supported if they did not clash.

An "All-star" Team.

Fame travels afar—in the motor cycle world. At Worcester, during the visit of the Dutch motor cyclists for the England v. Holland trial, the visiting riders eagerly sought out Howard R. Davies, Eric Williams, and J. Whalley, on account of their T.T. fame. No doubt if the British team were next year made up of "all champions" the motor cyclist fraternity of Holland would be immensely delighted. Why not a team of men such as Davies, Dauce, Williams, Hassall, Le Vack, de la Hay, Dixon, Gibson, Whalley, Alexander, and such like?

Current "Chat"

Cleaning a Sooted Plug.

After suffering from misfiring in the rear cylinder for some time prior to the track test in the Anglo-Dutch Trial, F. A. Hardy (3½ Zenith-Bradshaw) saved his non-stop by detaching the high-tension cable, and "spark-gapping" the plug.

"The Motor Cycle" in Paris.

At the Paris Salon current copies of this journal may be obtained on *The Motor Cycle* stand. Furthermore, a full range of books for motor cyclists and car owners, published in conjunction with *The Autocar* and *The Motor Cycle*, will be available.

SCISSORS TO GRIND!

W. W. Wiggins, an old Northampton scissor grinder, has created a sensation among his fraternity with the new motor cycle grinder outfit on which he is seen seated. He has traversed the roads with an old bicycle outfit for forty-eight years, but although sixty-two years of age, he believes in moving with the times, and "now" revs instead of plods, covering a radius of thirty or forty miles a day, as compared with his old limit of twelve miles. The machine is a 6 h.p. Enfield twin, and the grinder is fitted to the sidecar chassis.

Special Features.

AN ISLE OF MAN T.T. IN 1922.

WHY ENGLAND WON—
Impressions of the Anglo-Dutch Trial.

Eric Williams Married.

Congratulations to Eric Williams, D.C.M., twice winner of the Junior T.T., who was last week married to Miss M. G. Lewis, of Dilwyn.

An Optimist!

In reply to an advertisement of his lightweight machine (present value £45-50), a reader received the following: "Seeing you want to sell your motor cycle, would you look at £20 (twenty pounds)? I do not wish to surprise you, but I am not keen on buying a back number on a falling market, when next season's machines will range from about £25."

A New Road to Southend?

A proposition is being brought before the Essex County Council to construct a new road between London and Southend.

At the present time there is no good main road, and the two routes through Grays and Stifford have become inadequate for the large amount of motor traffic. The Essex County Surveyor will be asked to prepare plans and specifications for a new main road.

The Old Wyche Road in Competitions.

The Worcester County Council recently decided to make application to the Ministry of Transport for the prohibition of motor traffic on the Old Wyche Road, Malvern. The Council received a petition from the Malvern Urban District Council, signed by residents in the Old Wyche Road, complaining of the danger and nuisance to the public and residents by motor cyclists using the road for trial and test purposes, and the Malvern justices similarly complained.

1922 Programmes.

In addition to the 1922 prices mentioned on page 000, the B.S.A. Co. have announced their next year's programme as follows: 4½ h.p. chain-cum-belt, £107; all chain, £110; 6 h.p. twin, £152; 8 h.p. twin outfit, £185.

Douglas prices for 1922 will be reduced as follows: 2½ h.p. two-speed, £75; 2½ h.p. three-speed, £90; 4 h.p., £110; 4 h.p. sidecar, £135; 3½ h.p. sports model, £130; and 6 h.p. o.h.v. with sidecar, £165. All these prices include full equipment, lamp, horn, etc. Excepting the two-speed model, all the Douglas range is, of course, fitted with clutch and kick-starter.

Seaplane Squadron Reunion.

To-morrow, Friday evening, the 7th, ex-members of the Seaplane Squadron No. 8, R.N.A.S. (German East Africa 1916-1918) will hold a reunion dinner at Gatti's, when Capt. F. W. Bowhill, C.M.G., D.S.O., R.A.F., will preside. Mr. C. S. Thompson, 42, New Broad Street, London, E.C.2, is the organising secretary.

London's Motor Cycle Police Withdrawn.

The motor cycle section of the Metropolitan Police, formed a few months ago, has not proved so successful as was hoped, and is to be withdrawn. The section was intended more particularly for traffic regulation duties, and for dealing with offences against the Highways and Motor Car Acts. It is quite distinct from the special branch of the detective force, known as "the Flying Squad," which, using motor cycles and cars as occasion demands, has recently effected some sensational captures.

A BADGE OF INNOVATION.

Handle-bar badge for members of the M.C.C. who have gained a gold medal in any London-Edinburgh run. The price of these badges, which are enamelled in colours, is 10/-.

The Roughriders' Trial.

On Saturday the one event of the year which specially appeals to go-anywhere

riders, the Scott Trial, takes place. The start takes place from the Cattle Market, Otley, at 9 a.m., and the finish is at Burnsall at 4.30 p.m. The route will be similar to last year's, but the scheduled average speed is 20 m.p.h.

A Warning.

We have received an urgent letter from the Commissioner of Police with reference to the noise and undue speed of motor cycles in the Metropolitan area. The complaints principally emanate from Richmond Hill, Hill Rise, Kew Road, and Sheen Road, and the Commissioner goes on to point out that doubtless many of the cases giving rise to complaint are due more to thoughtlessness than to any want of consideration for other persons; but should these motor cyclists persist so as to render it necessary to resort to drastic measures, the offenders will have only themselves to blame for any proceedings that may be taken.

CLUB NEWS. (Continued from page 409.)

South-eastern Centre A.C.U.

Promoted by the Brighton and Hove M.C.C. the hill-climb on the 28th ult. was supported by a number of well-known riders, including H. Le Vack (7-9 Indian), who made fastest time of the day, but only after a tie with Kaye Don on one of the new sporting 6 h.p. o.h.v. Douglasses. As the appended results indicate, A. J. Koehler (3½ Douglas) was successful in five classes:

300 c.c. TWO-STROKES.—1, G. H. Symonds (2¼ Lewis), 28s.
350 c.c. (AMATEUR).—1, J. Stockwell (2¼ Hobart), 18s.
350 c.c. (GENERAL).—1, J. Stockwell (2¼ Hobart), 18s.
350 c.c. (OPEN).—1, J. Stockwell (2¼ Hobart), 19s.
500 c.c. (AMATEUR).—1, W. H. Sheraton (3½ Norton), 17s.
500 c.c. (GENERAL).—1, A. J. Koehler (3½ Douglas), 15s.
500 c.c. (OPEN).—1, A. J. Koehler (3½ Douglas), 15s.
750 c.c. (AMATEUR).—1, W. H. Sheraton (3½ Norton), 16s.
750 c.c. (GENERAL).—1, A. J. Koehler (3½ Douglas), 15s.
750 c.c. (OPEN).—1, A. J. Koehler (3½ Douglas), 14s.

UNLIMITED (AMATEUR).—1, W. H. Sheraton (3½ Norton), 16s.

UNLIMITED (GENERAL).—1, A. J. Koehler (3½ Douglas), 15s.

UNLIMITED (OPEN).—1, H. Le Vack (7-9 Indian), 14s.

600 c.c. SIDECARS.—1, B. S. Allen (3½ Norton sc.), 22s.

UNLIMITED SIDECARS.—1, H. Le Vack (7-9 Indian sc.), 16s.

Worcester and District M.C.C.

The results of this club's successful hill-climb of the 24th ult. have been announced as below:

TOWNLEY CUP.—Eric Williams (2¼ A.J.S.), 29s., fastest time of the day.

MELHUISE SILVER CIGARETTE CASE.—R. Eveson (3½ Norton), 33s., fastest time by private owner.

CILT PLAQUE.—Eric Williams (2¼ A.J.S. sc.), 37s., fastest three-wheeler or sidecar.

SOLO MOTOR CYCLES (Unlimited c.c.).—Expert: 1, E. Williams (2¼ A.J.S.), 30s.; 2, E. Main (8-10 Zenith), 31s.; General: 1, E. Main (8-10 Zenith), 31s.; 2, R. Eveson (3½ Norton), 33s.; Private: 1, R. Eveson (3½ Norton), 33s.; 2, C. Eveson (3½ Norton), 36s.

SOLO MOTOR CYCLES (not exceeding 600 c.c.).—Expert: 1, E. Williams (2¼ A.J.S.), 29s.; 2, A. Tompkins (3½ Norton), 30s.; General: 1, A. Tompkins (3½ Norton), 30s.; 2, R. Eveson (3½ Norton), 33s.; Private: 1, R. Eveson (3½ Norton), 33s.; 2, C. Eveson (3½ Norton), 36s.

SOLO MOTOR CYCLES (not exceeding 350 c.c.).—Expert: 1, E. Williams (2¼ A.J.S.), 29s.; 2, F. G. Morgan (2¼ Cotton), 45s.

Oxford M.C.

Extremely favourable weather attended the club's hill-climb on Aston Hill last Saturday. The hill rises gently to a sharp right-hand bend, where an easing of the gradient enables the rider to accelerate on top gear to the main climb after rounding a slight left turn at the bottom. The speeds were not unusually high, but some good riding and skilful gear manipulation were witnessed. Results:

CLASS 1.—1, M. Pearson (3½ Norton), 1m. 16s.

CLASS 2.—1, I. P. Riddock (8 Zenith), 1m. 1s.; 2, E. J. Cross (7-9 Harley-Davidson), 1m. 4s.

CLASS 3.—1, H. Lindop (2¼ Velocette), 1m. 23s.; 2, H. G. Moore (2½ Ner-a-car), 2m. 7s.

CLASS 4.—1, H. S. Barge (G.N.), 1m. 30s.; 2, C. Kimber (Bleriot Whippet), 1m. 58s.

CLASS 5.—1, H. Lindop (2¼ Velocette), 1m. 17s.; 2, S. G. Oliver (2¼ Douglas), 1m. 22s.

CLASS 6.—1, I. P. Riddock (8 Zenith), 56s.; 2, E. J. Cross (7-9 Harley-Davidson), 57s.

CLASS 7.—1, H. S. Barge (G.N.), 1m. 27s.; 2, C. Kimber (Bleriot Whippet), 1m. 46s.

CLASS 8 (3½ Norton), 57s.; 2, F. Hancock (4 Triumph), 1m. 0s.

AN INNOVATION FOR CLUB ENTERTAINMENTS.

DURING the most important events this year *The Motor Cycle* has been preparing an innovation to assist in making winter club life more attractive. The result of these efforts is *The Motor Cycle* film, which provides a most interesting hour's entertainment. This film features the leading stars in the motor

cycle world in their history-making achievements. Included in the programme are the Junior and Senior T.T. races, the great 500 miles race at Brooklands, incidents in the Six Days Trials, and, to vary the interest, there are episodes in the greatest car race of the year—the Grand Prix at Le Mans.

This film will be loaned to the clubs during the winter months, and secretaries should lose no time in booking their dates. In writing, alternative dates should be quoted. Communications should be addressed to the Editor (Films Department), *The Motor Cycle*, Hertford Street, Coventry.

NEW LONG DISTANCE RECORDS.

ON the afternoon of the finish of the Anglo-Dutch trial (Monday of last week), D. R. O'Donovan, riding a 3½ h.p. Norton and sidecar (79 mm. x 120 mm., 588 c.c.), in perfect weather, succeeded in breaking the fifty miles record. His average speed was 60.73 m.p.h. (97.73 km.p.h.), the time being 49m. 23.8s. He also beat the one hour record, covering in that time 60 miles 1,368 yards (60.77 m.p.h., or 97.80 km.p.h.).

A few days earlier Tudor Thompson, on a 2½ h.p. Douglas (60.9 mm. x 60 mm.,

350 c.c.), gained a wonderful series of records, breaking those for the 100, 200, and 300 miles, which have stood in the name of Hugh Mason, on a N.U.T.-Jap, since 1913. He also beat Holroyd's record of September 20th last year on a Blackburne, and gained Mason's three, four, five, and six hour records. As has been usual this year, he was favoured with excellent weather. The figures stand as follows, and they are remarkably consistent; the stamina of the small flat twin engine was well demonstrated by such sustained high speeds.

150 miles	.. 2h. 23m. 56.9s. = 62.32 m.p.h. (100.61 km.p.h.)
200 miles	.. 3h. 12m. 37.2s. = 62.29 m.p.h. (100.24 km.p.h.)
250 miles	.. 4h. 3m. 45.2s. = 61.48 m.p.h. (98.96 km.p.h.)
300 miles	.. 4h. 55m. 3s. = 61.00 m.p.h. (98.17 km.p.h.)
350 miles	.. 5h. 48m. 21.7s. = 60.29 m.p.h. (97.03 km.p.h.)
400 miles	.. 6h. 37m. 4.4s. = 60.44 m.p.h. (97.27 km.p.h.)
3 hours	.. 186 miles 1,511 yards = 62.28 m.p.h. (100.23 km.p.h.)
4 hours	.. 245 miles 1,686 yards = 61.48 m.p.h. (98.96 km.p.h.)
5 hours	.. 305 miles 219 yards = 61.02 m.p.h. (98.20 km.p.h.)
6 hours	.. 362 miles 1,294 yards = 60.45 m.p.h. (97.28 km.p.h.)

The 1922 T.T. to be held in the Isle of Man.

Previous Decision Reversed at the A.C.U. General Meeting at Leicester.

AFTER all, the 1922 T.T. races will not be held in Belgium, and the Isle of Man will again be the scene of our classic speed event.

This reversion of the decision, which was made by the Management and Competitions Committees of the A.C.U. (on August 15th last), was arrived at on Saturday morning during the A.C.U. General Committee meeting held at Leicester.

A deputation from the Isle of Man, consisting of Councillor Crookall; Member of the House of Keys; Councillor Cowin, Mr. H. Cowin, the Manx M.C.C.; Mr. H. Mylchreest, president of the Manx M.C.C.; Mr. H. Rogers, secretary of the Manx Club; and Mr. G. J. A. Brown, *The Isle of Man Times* and A.C.U. delegate, attended the meeting, and nothing of importance transpired until it came to the report of the Competitions Committee of August 15th, which contained the momentous decision to hold next year's T.T. in Belgium. Mr. G. J. A. Brown then asked for information concerning the 1922 T.T., and what had led to the committee's decision.

Why Belgium was Chosen.

Mr. Greenhill then replied, giving five reasons which had influenced his committee in deciding that the race should be held in Belgium. First, the 500 c.c. machines had outgrown the Isle of Man course. Secondly, the possible dates were inconvenient. Thirdly, the restrictions imposed by the Isle of Man authorities rendered the holding of the race difficult. Fourthly, there was the heavy cost of organising the event in the Island. Lastly, if the race were held in Belgium it would be a useful lever to persuade the British authorities to give permission to hold the race in this country in future years. Mr. Otto Thomas (who was elected vice-president) rose on a point of order. The report could not be adopted, he said, as it had not yet been decided to hold the 1922 race. He thought that the manufacturers should have been consulted. He would be the last to suggest that the A.C.U. should be governed by the trade; but, in a case of this kind, the trade, which were reported to have spent £1,000,000 on the T.T. races, should have had the matter put before them.

Major Potter urged that the meeting should not bicker over procedure, but first decide if the T.T. should be carried out, and, secondly, if so, if it should be in Belgium. The first proposal was proposed and carried unanimously, while the second was proposed by Mr. F. H. Bevan, and seconded by Mr. Norman Longfield.

A lengthy discussion then ensued. First, Mr. S. L. Bailey proposed an amendment, but, before he had finished, Maj. Vernon Brook proposed that the Competitions Committee report of August 15th should be accepted, leaving out that portion dealing with the T.T. races. Mr. S. L. Bailey was then urged by the Chairman to carry on the discussion on Mr. Thomas's motion, and most ably put forward the case for the Isle of Man. It was most important, he said, that the race should be held in Great Britain.

The value of the Isle of Man course had created an impression which had taken years to create, and enormous interest was taken in the event, not only here and on the Continent, but in our Overseas Dominions. If another course was used, the whole business would have to be started all over again. The behaviour of motor bicycles on the I.O.M. course was understood by the man in the street as clearly as b.h.p. It was the only great race whole-heartedly supported by Great Britain. Events were certainly held on the Continent, but could not be compared with this one. The modern engine had been developed by the T.T., and the 500 c.c. engine was not too fast for the Manx course. He did not think this type of engine was yet fully developed. As regards the international side, he gave a list of the foreign competitors of various nationalities who rode in 1914. As regards the restrictions in the Island, were not these, he asked, imposed very largely through the fault of the competitors? Riders had been trained on the Manx course, and there were fewer accidents now at high speeds than there had been in the past, when speeds were lower. He suggested that the race should be held in the I.O.M. in May, and asked if steps had been taken to run off the race in England. It was now clear, even at this early stage, that the feeling of the meeting was in favour of reverting to the Isle of Man, but the discussion continued, and Mr. Loughborough read favourable reports on the Belgian course from Messrs. A. G. Reynolds and F. H. Bevan. These gentlemen referred to the value of this circuit for testing the acceleration of engines, and the reliability of transmissions, the kindly attitude of the authorities, the guarding of the roads by 1,000 soldiers—thirty-three per mile—free of charge, special customs and travel facilities, and the number of possible Continental entries. Mr. Loughborough agreed that the race should be held in England, but saw no chance of getting a special Act passed in the next twelve months, but, if the race was held in Belgium next year, the A.C.U. would have a far more powerful lever with the British authorities.

Belgian Official Assistance.

The Chairman pointed out that in Belgium assistance was guaranteed by the Army, municipal, and Government authorities, and contributions to the value of £1,000 had been promised towards the expenses of the race.

After further discussion it was agreed to receive the views of the I.O.M. delegates. Councillor Crookall said that all Manxmen wanted to see the races held in the Island. The motor cycle tax would be reduced to 1s. for a month's visit, the Highway Board would erect an electric crane to facilitate the landing of the machines, while the I.O.M. Steam Packet Co. would carry and land the machines at an inclusive fee. There was still much A.C.U. property in the Island, and as the R.A.C. would run its races after the A.C.U., could not they share expenses in such items as the grandstand? With

regard to the difficulties of daylight during practice in May, the hour could be extended to a later time.

Councillor Cowin said the Highway Board would grant any date up to within fourteen days of June 20th, the date of the car races, and would tar spray the course. The other delegates also spoke on the subject.

Mr. Quintin Nicol said he supported Belgium for business reasons—on account of the guarantee offered.

Appropos of engine size, Mr. Geoffrey Smith asked if 500 c.c. machines were still wanted. Was there not, he asked, a tendency to reduce engine sizes to 350 c.c.? Would it not be better to make the 350 c.c. machines the Senior class, and so advance further along the steps to progress?

Negotiations with I.O.M. to Recommence.

The discussion then went in the direction of seeing whether the Isle of Man would not make a similar monetary offer to that made by Belgium.

On behalf of the Isle of Man as an A.C.U. delegate, Mr. G. J. A. Brown then spoke on the subject ably and at length. He made promises to the A.C.U. similar to those made by Councillor Crookall, and stated that the cost of policing the Manx course did not exceed £150. Had the Island, he asked, been approached for a guarantee? As regards cases of profiteering, he had never heard of Isle of Man hotelkeepers being asked for special terms.

Next, a long discussion ensued as to whether the matter should be referred back or settled at once, and the final course was taken, and it was ultimately agreed that the 1922 T.T. should be held, as formerly, in the Isle of Man, subject to a guarantee offered by the Manx authorities being acceptable to the General Committee.

Mr. Loughborough, dealing with the report of the Legislation Committee, gave a long list of the good work done by that body, on which the A.C.U. is represented.

As regards the 1922 competition programme, it was decided that the A.C.U. should hold the Tourist Trophy Races, the Six Days Trials, the Arbutnot Trophy Trial, and the One Day Trial for stock machines, while one open trial should be allotted to each centre, to be run by that centre, or a club in the centre nominated by the board.

A proposal in the name of Mr. Nicol that A.C.U. events should not be undertaken unless they could be made financially profitable was put forward by Mr. G. Featherstone, and very fully dealt with by Mr. Loughborough, who explained the matter very clearly and at great length. It was decided to leave the matter to the Management and Competitions Committees.

As regards the Reliability Premiership, it was announced that eight centres were in favour of the scheme and two against.

The Tiverton and District M.C. and L.C.C., the Uxbridge L.C. and M.C.C., and the Connaught M.C.C. had their applications for affiliation to the A.C.U. accepted.

HILLS THAT HAVE LOST THEIR TERRORS.

Few Failures on Noted Cotswold Grades in the Manville Trophy Trial.

MOTOR cyclists following an arrowless trials route in unfamiliar country are rather like sheep—the one who goes confidently on at a doubtful turning is accepted as leader by the others, who find out too late that—dismissing the woolly analogy—a little more careful study of the route card would have paid.

This happened several times on Saturday during the fifth annual Manville Trophy Trial of the Coventry and Warwickshire M.C., which was otherwise a remarkably successful and enjoyable affair, attracting no fewer than seventy-five entries, despite the fact that it was a strictly closed club event. It was clearly stated in the regulations that only the non-stop sections would be arrowed, and, although the twenty odd miles before the lunch stop were admittedly very complicated to follow on the route card, the fact that fully 50% of the starters "discovered" all the observed hills and came in on time shows that it was not impossible.

No Trouble Climbing.

Starting at Coventry—No. 1 at 8 a.m.—the earlier men had a cold, damp run through the morning mists almost to Saintbury, the first observed hill, for it was well after nine before the sun appeared. The hill was quite dry, however, and many of the soloists only used second gear for a hundred yards or so of the steepest portion. Neither were any of the sidecars seriously troubled, and the lone observer, consequently, had a dull time.

Following the time-honoured Midland trials route down Willersey, through

Although troubled with clutch slip, D. A. Atkin (5-6 Rover sidecar) makes a good ascent of Sudeley Hill.

Broadway to Winchcombe, brought the competitors to Sudeley Hill, which is only a shade more difficult—when, as on

Saturday, it is dry—than Saintbury. Before getting thus far, however, J. E. B. Bramley (3½ Coventry Challenge) broke his frame and retired.

One or two others were observed to be in difficulties on Sudeley. E. A. Barnett (2½ Francis-Barnett) just survived the non-stop section with a loose petrol union, and P. H. Johnson, who with M. E. Holroyd, had been doing wonders on a belt-driven Rudge, broke a belt.

On Portway Hill.

Apart from one or two awkward gates (that opened inwards) there was little of note now until, passing through Cheltenham, the third observed hill, Portway, was reached. Here the surface was rough, but, as it was also dry, the majority had little difficulty in picking a clean course. A. L. Constantine (2½ Hobart) failed, but W. F. Smith and F. T. Downs, also on Hobarts, made excellent ascents. In the same way there was some doubt whether M. W. Danks (2½ Francis-Barnett) would get up, while E. A. Barnett, similarly mounted, never wavered. C. Mansfield (3 A.B.C.) appeared to be in difficulties with his gear lever, and E. M. Broughall (3½ Coventry Challenge) came up on a flat rear tyre—he retired later, having suffered, according to various reports, six to nine separate punctures.

M. E. Holroyd and P. H. Johnson on the belt-driven Rudges made wonderful ascents; but for sheer speed the palm must be given to the two sporting Humbers, driven by L. Crisp and M. Seally. Of the sidecars, W. J. Mont-

The only Morgan in the trial, driven by C. E. Hulse, conquers Rising Sun without difficulty.

T. R. Gibbins (8 Acme sidecar) makes a fast ascent of Rising Sun, which was in very good condition.

gomery's Brough Superior was as fast as most of the solo machines. R. A. Wright and H. Finch (on Triumph sidecars) were also very good, but H. A. Smith, on a third Triumph outfit, failed completely.

Less than three miles further on came Cranham Hill, which is, perhaps, not so steep as Portway, but which has an exceedingly deceptive turn studded with a miscellaneous collection of miniature boulders. How Holroyd ($3\frac{1}{2}$ Rudge) got up on a 7 to 1 gear only he himself knows; but Johnson had to slog this time. No. 13, A. L. Constantine, upheld popular superstition by failing, and riding down the hill. D. A. Atkin (5 Rover sc.) was troubled with acute clutch slip, but managed to scramble up, as did T. R. Gibbins (8 Acme sc.), after a stop through taking a wrong turning just on the hill. All the solo Humbers were again excellent, but W. Brandish was probably the most impressive of the three. The Rev. J. M. Philpott ($2\frac{1}{4}$ Velocette), as usual, made an effortless, careful ascent.

Many go off the Course.

As already indicated, several competitors missed the next two tit-bits, the hairpin at Sheepscombe—comparatively easy—and St. Chloes Green—deceptively difficult for 'hot engines. Nevertheless, only two sidecars failed on the latter grade, W. A. Weaver (5-6 Coventry Victor sc.) and H. A. Smith (4 Triumph sc.) being the unfortunates. P. H. Johnson ($3\frac{1}{2}$ Rudge) had again to use his feet, which is not surprising considering that the hill is approached by a fairly acute right-hand hairpin.

Immediately after lunch, at Stroud, an easy starting test was held. Petrol taps were turned on by an official 15s. before the word to go, and marks were deducted for failure to start in three seconds. There was considerable nervousness amongst the early starters, who did not

know just what they could do in the specified time, after their engines had had two hours to cool down; and, curiously enough, the first six men, variously mounted, lost more marks between them than all the rest put together. The Humbers and the chain-drive Ridges excelled in this test.

The Acceleration Test.

Proceeding *via* a weighbridge, where weights were obtained "while you wait," the competitors were sent up Rodborough Lane for the acceleration test (over a measured hundred yards from a stand-

still). As it was held on a grade of 1 in 10, clutchless machines were at a disadvantage. Some atrocious driving was witnessed. The three Humbers, a Norton, a Triumph, and an A.B.C. were best in the solo class, a Brough Superior among the sidecars, but the final results will be made on formula. Four sidecars stopped altogether.

On the homeward journey Birdlip was observed—with no result.

Rising Sun again.

Then came Rising Sun, which was bone dry, and therefore not such a terror as usual. Quite a number of spectators had gathered here, but, after M. W. Danks ($2\frac{3}{4}$ Francis Barnett) and J. N. Roberts ($2\frac{3}{4}$ New Imperial) had failed, they were treated to a procession of clean ascents. A non-competing Rover light car baulked W. E. Grant (7 F.N.), but he made a clean climb on his second attempt. It was touch and go with many more, but in every case they succeeded in breasting the summit unaided. Apparently those who had been finding the course too difficult had retired at the lunch stop.

Three of the early solo men missed the right turn to Gambles Lane, and made very excellent ascents of Post Office Hill. There were no cheering spectators, so they discovered their error in quick time, and made startling descents without losing their non-stops.

Thus, to all intents and purposes, ended the trial, for the run home *via* Willersey was not productive of incident, and it was an easy task for the survivors to ride in dead on time. One wily soloist rode up to within fifty yards of the finish, stopped, and coolly corrected his watch to official time (supplied by waiting friends). Approximately 80% finished; but, as quite a few had not completed the entire course, we refrain from publishing a list of finishers.

It should be an easy matter to find a winner, for not many retained absolutely clean sheets, and the acceleration test should prevent a tie.

Birdlip was observed, but there were no failures. E. Poppe (4 Triumph) on the upper reaches of the hill.

BIG TWIN BEATS THE SINGLES.

Game Struggle of Super-efficient 500 c.c. Machines with 1,000 c.c. Racer at Doncaster.

GOOD sport and some fine riding were exhibited by an entry of nearly 250 at the open speed trials of the Doncaster and District M.C.C. on Saturday last.

The half-mile course was in splendid condition, although a slight left bend and a rather short flying start through some gates rather tended to the registering of slower times than might have been expected.

Several thousand spectators lined the course during the afternoon, and for once did not evidence any intention to stray. They evidently enjoyed the events, which were concluded without any untoward incident; and, although taking five and a half hours to run off, they did not flag to any extent, each class being run off promptly, the only intervals being those necessary for the riders to return to the starting post.

Results Promptly Announced.

Special mention might be given to the way in which the times were announced immediately after the riders had passed the finish, while at the end of each class the speeds of the leading men were also given out.

In Class 3 a re-run was necessary, J. R. Sylvester (2½ Velocette) having the hard luck to crash within a few yards of starting; his carburetter was damaged, and he had to be content with second place.

E. Searle (3½ Sheffield-Henderson) seemed to get a bad wobble in the 500 c.c. Expert Class, which certainly put him out of the running, but a glance at the results of other classes proves that his nerves were not affected. In this class

Getting up speed in the flying start. C. P. Wood (3½ Scott) is shown passing through the gates that led on to the course proper.

H. Collard on a Rover had to retire with valve trouble.

Class 11 brought some very fast riding, for it was the best represented class, and thus the winner becomes the holder of *The Motor Cycle Cup*. Great interest was shown in the riding, but H. Le Vack (7-9 Indian) easily outpaced the field with

a margin of 2s. at a speed of 81-82 m.p.h.; this time was the fastest of the day (22s.), and a record for the course. The same rider made the highest speed in the side-car classes at 67.16 m.p.h.

Speedy Lightweight.

J. H. Simpson did well on his 2½ h.p. A.J.S., and with the excellent time of 25½s. easily beat numerous machines of higher capacity. The brothers Houlding, on 2 h.p. Matadors, rode well. Their results as announced were as follows:

CLASS 1 (Two-strokes up to 250 c.c.).—Experts: 1. R. L. B. Taylor (2¼ Levis), 32½s.; 2. J. Sylvester (2¼ Velocette), 32½s.

CLASS 1a (Four-strokes up to 250 c.c.).—Experts: 1. N. Houlding (2 Matador), 31s.; 2. B. Houlding (2 Matador), 31½s.

CLASS 2 (as Class 1).—General: 1. R. L. B. Taylor (2¼ Levis), 32½s.; 2. W. Vines (2¼ Velocette), 34½s.

CLASS 2a (as Class 1a).—General: 1. N. Houlding (2 Matador), 31s.; 2. R. Wood (2¼ New Imperial), 32½s.

CLASS 3 (Two-strokes up to 300 c.c.).—Experts: J. R. Sylvester (2¼ Velocette) and R. L. B. Taylor (2¼ Levis) tied, 33s. Re-run: 1. R. L. B. Taylor, 33.4s.; 2. R. J. Sylvester, 36.1s.

CLASS 3a (Four-strokes up to 300 c.c.).—Experts: 1. B. Houlding (2 Matador), 30½s.; 2. N. Houlding (2 Matador), 31½s.

CLASS 4 (as Class 3).—General: 1. R. L. B. Taylor (2¼ Levis), 32s.; 2. W. Vines (2¼ Velocette), 36s.

CLASS 4a (Four-strokes).—General: 1. N. Houlding (2 Matador), 30½s.; 2. J. C. Nichols (2½ Omega-Jap), 31½s.

CLASS 5 (Solos up to 350 c.c.).—Experts: 1. H. Simpson (2¼ A.J.S.), 25½s.; 2. G. S. Boston (2¼ A.J.S.), 27½s.; 3. B. Watts (2¼ Dot), 28½s.

CLASS 6 (Solos up to 350 c.c.).—General: 1. B. Watts (2¼ Dot), 29½s.; 2. J. Cooke (2¼ New Scale), 29½s.; 3. N. Houlding (2 Matador), 32s.

CLASS 7 (Solos up to 500 c.c.).—Experts: 1. W. Hassall (3½ Norton), 24½s.; 2. R. T. Calthorne (3½ Norton), 25s.; 3. J. H. Simpson (2 A.J.S.), 25½s.

CLASS 8 (Solos up to 500 c.c.).—General: 1. N. Sisson (3½ Norton), 26½s.; 2. R. Lucas (3½ Newbeam), 27½s.; 3. S. Ollerhead (3½ Norton), 28½s.

CLASS 9 (Solo up to 750 c.c.).—Experts: 1. W. Hassall (3½ Norton), 24½s.; 2. R. T. Calthorne (3½ Norton), 24½s.; 3. J. H. Simpson (2 A.J.S.), 25½s.

Winner of *The Motor Cycle Cup* for fastest time in the best represented class, H. Le Vack (7-9 Indian), who also made fastest time of the day in both solo and passenger classes.

Big Twin beat the Singles.—

CLASS 10 (Solo up to 750 c.c.).—General: 1, E. Searle (3½ Sheffield-Henderson), 24½s. Three tied for next place at 27½s., and on re-run were placed: 2, F. Sissons (3½ Norton), 25½s.; 3, S. Ollerhead (3½ Norton), 26½s.; 4, R. Lucas (3½ Sunbeam), 27½s.

CLASS 11 (Solo unlimited).—Experts: *1, H. Le Vack (7-9 Indian), 22½s.; 2, H. Hassall (3½ Norton), 24s. Three tied for next place at 24½s., and on re-run were placed: 3, R. T. Cawthorne (3½ Norton), 24½s.; 4, E. Searle (3½ Sheffield-Henderson) and F. W. Dixon (7-9 Harley-Davidson), 24½s. *Fastest time of the day (speed = 81.82 m.p.h.).

CLASS 12 (Solo unlimited).—General: 1, E. Searle (3½ Sheffield-Henderson), 24½s.; 2, J. Stacey (7-9 Harley-Davidson), 25½s.; 3, F. Sissons (3½ Norton), 26½s.

CLASS 15 (Sidecars up to 500 c.c.).—Experts: 1, R. T. Cawthorne (3½ Norton), 28½s.; 2, E. Searle (3½ Sheffield-Henderson), 30s. Winner's speed over 65 m.p.h.

CLASS 17 (Sidecars up to 750 c.c.).—Experts: 1, R. T. Cawthorne (3½ Norton), 29½s.; 2, E. Searle (3½ Sheffield-Henderson), 29½s.

CLASS 19 (Sidecars, unlimited).—Experts: 1, H. Le Vack (7-9 Indian), 26½s.; 2, R. T. Cawthorne (3½ Norton), 29½s.; 3, E. Searle (3½ Sheffield-Henderson), 29½s.

CLASS 20 (Sidecars, unlimited).—General: 1, E. Searle (3½ Sheffield-Henderson), 30s.; 2, L. Padley (3½ Norton), 33½s.

Special Awards.

It is understood, although not confirmed, that A. B. Dodds (2½ Levis) wins the *Chronicle* Cup and gold medal and a silver bowl, and that J. E. Claybourne (4 Triumph) wins a silver cup, these prizes being for Doncaster Club members only. Le Vack (7-9 Indian), as before-mentioned, gained *The Motor Cycle* Cup.

Miss Wilson (2½ Velocette) adopts a most business-like riding attitude. She is shown crossing the finishing line.

A NOVEL MIDLAND EVENT.

GLORIOUS weather favoured the Birmingham M.C.C. Half-day Sporting Trial last Saturday; the entry was a very fine one for so late in the season, there being some fifty-two competitors. The route was sixty-six miles long, and was within a radius of twenty-five miles of Birmingham; it included a slow hill-climb, an acceleration test, a surprise brake test, as well as several stiff hills, a colonial section, and a "splash."

The first man departed at 2 p.m., the others following at minute intervals. From the commencement the course was very well arrowed, and some humorous officials had placed a few inspiring placards to encourage competitors—one worded, "Don't stop, accelerate," being placed outside an inn!

B. Kershaw (2½ New Imperial) put up an excellent performance in the slow climb on Beacon Hill, his time being 10s. over than any other competitor, includ-

ing the sidecars. A. E. Phillips (3½ Norton) was next best of the solos; while in the sidecar class J. H. Ross (3½ Sunbeam sc.) made the best performance.

Next came a tricky hairpin corner. Most of the riders were very careful, being-satisfied to crawl round at walking pace. There were very few failures, and these were all solo men, the first being a Connaught rider, who, approaching too fast, fouled the bank, and came off. R. C. Bennett, on a Federation, applied his brake, but could not release it again, consequently he came to a standstill. Other failures were C. Holyoak (2½ Federal), L. West (2½ Velocette), K. Sutherland (2½ Douglas), and G. Pehrson (4 Dunelt). Miss Pickering, riding a 4 h.p. Powell, came round in wonderful style, and everyone applauded her.

The next difficulty was Gravel Pit Hill, where only twenty-six riders made clean ascents; but some consolation was found

when, on reaching the top, they were met with a cartoon depicting a man with his finger to his head, worded, "This is where you want it."

In the acceleration test, the star performers were R. W. Duke (4 Triumph), B. Kershaw (2½ New Imperial), T. H. Weaver (2½ Verus), and F. A. Watson (3½ Sunbeam).

The brake test, which was a surprise event, was held near Ullenhall, and several were "caught napping," because they were required to pull up in the short distance of 21ft.

Forty-two finished on time and two were late, the others being on the "list of missing."—Everyone arrived in a very happy mood, for which must be praised the excellent organisation and also the "social element," brought about by the introduction of inspiring notices on various portions of the route. Results are not yet available.

PRELIMINARY LIST OF THE PRINCIPAL EXHIBITORS AT OLYMPIA.

At a little time we shall again be in the midst of the hectic days of the Olympia Motor Cycle Show. From an examination of the preliminary list of exhibitors, we may forecast that there will be no

falling off this year either in the number of exhibitors or the interest of the exhibits. Several names are missing, but a number of newcomers take their place. The number of exhibitors exceeds two

hundred and sixty, of which nearly half are large displayed stands on the ground floor. Following is a list of motor cycles, runabouts, and sidecars, together with the stand numbers:

A NEW M-L MAGNETO.

Light Weight, High Efficiency, and Compactness are Features of the Latest Model.

RECENT developments in special cobalt steels have given rise to the hope that the magnetos of the future would be smaller and lighter. That this hope was not unfounded is evidenced by the latest type of M-L magneto which has been produced for lightweight single-cylinder and flat twin motor cycle engines.

In construction this magneto is somewhat unusual, for, though the armature is of normal design, two separate magnets of remarkably small dimensions, though of very high capacity, are separated at each end by laminated pole shoes. Die cast aluminium end pieces of circular formation support the pole shoes, while the magnets are held in position by their own magnetism and the endwise grip of the two end pieces, which in turn are held together by two long bolts. Under-cut grooves are formed in the end pieces, and into these fits a sheet steel cover which entirely encloses both pole pieces and magnets, and forms an effective

waterproof protection. Following the lines of the Maglita set, the contact breaker has a parallel action, the movable point being mounted on a leaf spring which is forced outwards for the break by a rod operated by a face cam. On the removal of a spring cap the whole contact breaker stands clear of the remainder of the instrument, and the adjustment for the tungsten points is therefore extremely accessible.

Light Weight.

In appearance the new instrument is very neat and compact, and the weight is but $4\frac{1}{2}$ lb. In addition, the simple construction will probably permit of its being sold at a low figure. We have had one of these magnetos in use on a $3\frac{1}{2}$ h.p. Norton for some distance, and have found it satisfactory in every way. The starting and slow running are at least as good as either of the two instruments which we have previously tried, one of which was a special racing device, and we have not experienced a misfire at any speed. In spite of its light weight, the new M-L is robustly constructed, and it should be added that prolonged tests have proved the tungsten points to be eminently satisfactory with this special type of magneto. Though our illustration shows an external return spring for the spark retard, this fitting has been obviated in

later models by an internal clock spring device, which adds to the neat appearance.

Maglita Improvements.

Detail modifications have also been made to the Maglita combined ignition and lighting device. The switch gear has been improved, and a time element has been introduced in the cut-out, so that there is little chance of the dim bulb coming into action during a momentary slowing for a corner.

(Left) Showing one of the magnets and laminated pole shoes.
(Right) The contact breaker is very accessible.

This illustration of the new M-L magneto on a Norton motor cycle conveys some idea of its small size. Its height is not much more than half the usual.

Included in the route of the Levis trial, described last week, was a portion called the "Colonial Section." Obstacles were placed on the smooth pathway, necessitating competitors traversing a section of bog. J. Knibbs (24 Levis) avoiding the branches.

Amazing Result of a Course of MAXALDING

*The Story of Case B12706 is briefly told
here without comment or embellishment.*

At the beginning of treatment—Condition:
Heart dilatation. Great exhaustion and weak-
ness. Measurements: Weight, 9 st. 4 lb. Height,
5ft. 1in. Neck, 12½in. Chest (expanded), 36in.
Waist, 30in. Forearm, 8½in. Biceps, 10in.
Triceps, 9in. Thighs, 18in. Calves, 12½in.

At the conclusion of treatment three months
later—Condition: Heart, normal. Lungs,
perfect. Health splendid. Measurements:
Weight, 10 st. 7 lb. Height, 5ft. 1½in. Neck,
15in. Chest (expanded), 44½in. Waist, 32in.
Forearm, 10in. Biceps, 13in. Triceps, 11in.
Thighs, 23in. Calves, 14in.

The three Branches of MAXALDING are:

THE CURATIVE TREATMENT, which eradicates
Functional Disorders, and strengthens the
heart, lungs, and other internal organs.

THE HEALTH COURSE, for men and women
who are organically sound, but lack Nervous
Energy, and desire to be absolutely fit. Also
for those who desire to be as bright mentally
and as beautiful physically as Nature intended
them to be.

THE GREAT STRENGTH COURSE, prepared
for men who desire a very fine development
and man's crowning Glory—Great Strength.

Write for the Booklet entitled "MAXALDING,"
and in your letter please state whether you
desire to eradicate a Functional Disorder, to
develop a Perfect Body, to increase Energy, or
to acquire Great Strength. The enquiry will
cost you nothing and commit you to nothing,
yet your desires may be realised beyond your
expectations.

MAXALDING,
22, New Stone Buildings,
Chancery Lane,
LONDON, W.C.2.

BACK TO OLD PRICES:

**ALEXANDER'S
ASTOUNDING OFFERS!**

Our Sale of Machines at Bargain Prices is proving an unqualified success, as the prices at which we are offering Motor Cycles is unequalled elsewhere.

SWEEPING REDUCTIONS.

**STILL ANOTHER
SUBSTANTIAL CONCESSION!**

We realise that, at the present time of the year, many intending purchasers of motor cycles are waiting until after December 31st before buying, solely on account of the full year's licence having to be paid for the remaining part of this year. As a further special inducement, we are prepared to pay the tax for this year on the few remaining shop-soiled machines which we are still offering at huge reductions. This concession only lasts until our present stock is cleared.

DON'T MISS THIS OPPORTUNITY!

**Send at ONCE for our
LIST OF BARGAINS.**

**ALL MODELS TO SUIT
ALL MOTOR CYCLISTS**

N.B.—It will be helpful if you will give us an idea of your particular wants when writing.

ALEXANDER'S

**113-115, Lothian Road, EDINBURGH.
272-274, Gt. Western Road, GLASGOW.**

When ordering, please write dislaid.

CARS FOR SALE.

HALIFAX.—Latest new Calthorpe, Lagonda, Standard, Coventry Premier, and Atterdale cars. Get our exchange quotation.—Halifax Motor Exchange, Horton St., Halifax. [2673]

10-12h.p. Clyde, White and Poppe engine, Zenith, 4-seater and light van body interchangeable to carry 6-cwt., good running order; £95.—Wait and Co., Ltd., Leicester. [2488]

1916 Calthorpe 2-seater, dynamo, clock, speedometer, appearance and condition excellent, privately owned; £210.—Tel.: Museum 6626. A.S.C., 60, Mortimer St., W.1. [3193]

110 GNS.—Lagonda 11h.p. 1915 4-seater, dynamo lighting, 5 detachable wheels, excellent condition; consider motor cycle part.—98, Tulse Hill, S.W.2. 'Phone: Brixton 2104. [3056]

7-9h.p. Swift 2-seater, 1914, lamps, tools, tax, splendid order; Triumph or good cycle part payment; £135.—Gray and Levin, 5, The Boulevard, Balham, S.W. Tel.: Streatham 2417. [2656]

MORRIS-OXFORD 10h.p. De Luxe Model, special sporting 2-seater body, bulbous back, bodywork unscratched, mechanically perfect, fast and economical; any trial or examination; £225.—71, Bengoe St., Hestford. [2524]

10-12h.p. Clyde (£9 tax), White and Poppe engine, wide 2-seater, new hood, screen, Stepmey, thoroughly overhauled and guaranteed, tyres almost equal new, repainted; photo; £105.—Wait and Co., Ltd., Leicester. [2487]

HUMBER 10h.p., 4-cyl., smart 2-seater car with dickey seat, Bosch, Binks carburettor, economical, fast, guaranteed perfect, paintwork, mechanism, everything splendid condition, lamps, tools, tax paid; trial any time; bargain, £120; exchange combination and cash.—Charles, 45, Charles St., Commercial Rd., Stepney, London. [3144]

TAXICABS.

SIDECAR Taxi Combinations, cash or gradual.—County Cycle and Motor Co., Broad St., Birmingham. [8449]

£100 down and twelve monthly payments of £20 secures London taxi cab.—Details, Palmer's Garage, Tooting. [2937]

MOTOR TRANSPORT VEHICLES.

WIND Screen, Easting Royal, like new; £3/10, bargain.—Campbell, 55, Gibson St., Hillhead, Glasgow. [X0053]

£100 down and twelve monthly payments of £25 secures a magnificent 3-ton lorry.—Details, Palmer's Garage, Tooting. [2938]

1914 5-cwt. 6h.p. Girling Delivery Van, repainted royal blue, overhauled and guaranteed perfect; £35.—Malvern Garage, Malvern Rd., Thornton Heath, Surrey. [2819]

EXTENDED PAYMENTS.

HALIFAX.—New and second-hand motor cycles; deferred payments at lowest rates.—Halifax Motor Exchange, 25, Horton St., Halifax. [2672]

FOR Best Treatment and best terms for light cars, cycle cars, or motor cycles of any make, new or second-hand, write Service Co., 292, High Holborn, W.O.1. [0672]

ENGINES.

1913 L.M.C. Engine, 4½h.p., complete; offers.—Norbury Terminals Garage. [5073]

2½h.p. Arden, new, C.A.V. mag.; offers.—Jones, 7, Collingham Rd., London, S.W.5. [X0026]

REX 6h.p. Twin Engine, Bosch, B. and B., complete; £9.—Tintagel, Wickham Rd., Beckenham. [2576]

4h.p. Bradbury, single, newly overhauled; £6, a bargain.—Dykes, 25, Moor Park, Stevenston, Ayrshire. [2446]

5h.p. Rex Engine, a.i.v., Bosch, B. and B.; £7; offers.—Shepherd, Thwaite Platt, Dalton-in-Furness. [3243]

3½h.p. Stevens Engine, m.o.v., with T.B. magneto, fine condition; £8/8.—12, Winchester St., Taunton. [2805]

4h.p. Twin, q.h.v., Bosch, Amac, £16; 2½h.p. Dalman, £27/10, new, complete.—Tonge, Holmesfield, Sheffield. [2951]

INDIAN.—A few Powerplus 7-9h.p. engines at a remarkably low price of £15/15 each.—Smith's, 86, Chalk Farm Rd. (opposite Chalk Farm Tube Station), London. 'Phone: Hampstead 2767. [2740]

2½h.p. 2-stroke Engine, complete with C.A.V. magneto, new, complete and perfect; price £10; letter for appointment.—Kelowna, Earlsdon Ave., Coventry. [X9390]

HEPPELTHWAITE.—6h.p. W.C. Humber, single, complete unit, clutch, mag., carburettor, pump, etc., £14; 3½h.p. Triumph engine, £9; 3½h.p. Rex, £5/5, m.o.v.; 3½h.p. Rex, a.i.v., £3; 2½h.p. Minerva, m.o.v., £3/10, a.i.v., £3; 2h.p. Peugeot, £2/10; 5h.p. Stevens, £3/10; White and Poppe less cylinder and piston, £2; James cylinder, 30/-; a.i.v. Rex cylinder, £1/10.—'Phone or write Heppehthwaite's, and see Sidecars column for chassis snips; stamp please.—19, Wilcox Rd., South Lambeth, London, S.W.8. [3097]

ENGINES.

BARGAIN.—4hp. Humber engine, complete, magneto, carburetter, guaranteed; £15.—Searle's Stores, Southborough. [3112]

1915 Verna 2-stroke, complete, mag., Senspray, aluminium silencer, engine plates, all controls just rebushed, guaranteed; £8/10, of nearest offer.—Underhill, 12, Meivyn Rd., Bishopston, Bristol. [2522]

J.A.P. Engines. J.A.P. Engines. J.A.P. Engines.—1 have the largest stock of J.A.P. engines and parts in England; over 30 engines always in stock to select from, and the price: 5hp. twins, £17/10; 8hp., fitted with new pistons and 1921 cylinders, £20; and 8hp. at £18/10. Parts: 8hp. J.A.P. crank cases, 50/- pair; 5hp. crank cases, 40/- pair; 8hp. cam wheels complete, 15/- each; valves complete, 4/- each; valve guides, 3/6 each; tappet guides, 2/6 each; exhaust valve and inlet cap, 4/- each; tappets complete, 2/6 each; cam levers, inlet and exhaust, 4/- each; gudgeon pins, 5/- each; and all parts for J.A.P. engines. Stamp for reply.—Hawkins, 455, York Rd., Wandsworth. [1918]

IGNITION APPLIANCES.

NEW Motor Cycle Magnetos.

500 for Immediate Disposal.—Thomson-Bennett, C.A.V., all degrees, single and twin, leads, and variable ignition, for all machines, £2/12/6. Includes postage; Bosch £3, postage extra, 1/6. We forward immediately all magnetos on approval against cash. Money refunded if dissatisfied.—The Central Motor and Ignition Works, 14a, Loughborough Rd., Brixton, London, S.W.9. [9809]

COUNTY of London Engineering Works, Ltd.

MAGNETOS. Magnetos. Magnetos.

GOVERNMENT Surplus Unused Magnetos.—Having bought the entire stock of the following makes of magnetos, we are able to offer them at large discounts.—Below.

BOSCH Single, clock or anti, £3; Thomson-Bennett, single or twin, clock or anti, 42, 45, 50, 55, 180°, £2/15; C.A.V., single or twin, clock or anti, £2/10; postage on the above magnetos 1/6 extra.—Below.

ALL these magnetos are fitted with variable ignition and leads, and are fitted with base plates, ready to be immediately fitted on. Please state make of engine when ordering.—Below.

COUNTY of London Engineering Works, Ltd.

PLUGS, high-tension, wire, plugs.

GOVERNMENT Surplus; new plugs in boxes.

A.C. (Titan), 1/6; K.L.G. type 7, detachable, 2/6; high-tension wire, new, unperished, 9 mm., 5d. per yard, 25 yard coil 8/6; 7 mm., 4d. per yard, 25 yard coil 6/-; 5 mm., 3d. per yard, 25 yard coil 4/-; 3 mm., 2d. per yard, 25 yard coil 2/-.

POSTAGE on Coils 5 mm. and upward, 1/-; 3 mm., 9d.; (see other goods under Miscellaneous).—Below.

ALL Goods on Approval per return post on receipt of cash; money refunded if not satisfied.—Below.

COUNTY of London Engineering Works, Ltd., 51a, New Park Rd., Brixton Hill, London, S.W. Tel.: Streatham 2898. T.A.: Ignitionac, Brixstret, London [5583]

H.B. Ignition Co. for unused W.D. Thomson-Bennett magnetos, 500 in stock.

H.B. can supply from stock single and twin T.B., 42, 45, 50, 55, and 180 degrees, clock and anti, with baseplate and bolts for fixing on Triumph, P.M., B.S.A., J.A.P., Douglas, etc.; £2/10, postage 1/6.

H.B. sends all goods on approval per return post on receipt of cash; every magneto sent out carries H.B. 12 months' guarantee.

H.B. will take your old magneto in payment.

H.B. can offer you large discount for quantities of A.C. Titan plugs in boxes, 1/6 each. Send your enquiries to an old-established firm.—H.B. Ignition Co., 78, New Park Rd., Brixton Hill, London. [0694]

SEVERAL Magnetos, cheap or exchange for gears or parts.—Box 6,687, c/o The Motor Cycle. [3255]

SEVERAL Magnetos, perfect, all types; cheap; sale or exchange.—Norbury Terminus Garage. [3074]

SPARKING Plugs, Sphinx, A.C., etc., perfect; 9d.; postage 3d., package—15, Dalin Rd., Woolwich. [2385]

K.L.G. Sparking Plugs, wonderful value, 4 for 5/-, post free.—Thompson, 69, Queen St., Wolverhampton. [5031]

MAGNETOS by C.A.V.'s, Bosch, and Thomson-Bennett, 50% below cost; see last or next week's issue of this paper.—Vale Engineering Syndicate, 8-11, Brown's Buildings, St. Mary Axe, E.C.3. [0700]

P. and M. Magnetos, complete sprocket and chain, ready to go on, guaranteed; £2/7/6.—Below.

MAGNETOS, T.B., clock or anti, for any machine, £2/5.—Below.

500 SPARKING Plugs, new, guaranteed; 2/- each.—Motor Cycle Accessory Co., 868a, Old Kent Rd., S.E. [2348]

THE MOTOR CYCLE Insurance Policy

Testimony

THIS space will be occupied each week with copies of letters from Policy holders who have made claims. Original letters may be inspected.

Dear Sirs,

Your cheque in settlement of my claim to hand to-day, for which I thank you. I must express my appreciation of the prompt and business-like way in which my claim has been dealt with.

Yours faithfully,

The only Safe Test of Insurance is Claims. We settle Claims promptly.

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED

(Incorporating The Autocar Insurance Department, Established 1904).

Head Office:

77, Cheapside, London, E.C.2.

Telephone: City 9831 and 9832.
Telegrams: "Autocinsure, Cent, London."

IGNITION APPLIANCES.

RELANCE Magneto Repairing Co. for repairs and new magnetos.—See below.

RELANCE guarantee to return your magneto within 3 days, and if necessary 24 hours, with a written guarantee for 12 months.

RELANCE test every magneto after repair under all running conditions, and, as we contract for many of the largest concerns, you need have no hesitation in placing your repairs and orders with us.

RELANCE manufacture and stock spares for Thomson-Bennett, E.I.C., Splittorf, U.H., Bosch, Dixie, etc.; special line genuine platinum screws for every make, 12/- per pair.

RELANCE will be pleased to give advice free of charge upon any question concerning ignition troubles, as we place our long-standing experience at your disposal, and old and new customers may be certain of getting the usual promptness and courtesy that we have always endeavoured to give.—Reliance Magneto Repairing Co., 283, St. John St., London, E.C.1.

RELANCE Magneto Repairing Co., 283, St. John St., E.C.1, for new and second-hand magnetos.—See below.

THOMSON-BENNETT Magnetos, waterproof, variable ignition. These magnetos leave us in perfect condition, and carry our guarantee to either replace or refund cash if found unsatisfactory. Single-cyl., clock or anti, suit any machine, 55/-; 45, 48, 60, 55, 180 deg., for J.A.P., Clyno, Douglas, etc., 55/-.—See below.

C.A.V. Magnetos, brand new, single and twin-cyl., ideal for Douglas, Lewis, Calthorpe, O.K., or any lightweight, single or 180° twin, 55/-.

E.I.C. Magnetos, absolutely brand new, not shop-soiled, ready to fit on Triumph, P. and M., B.S.A., Norton, Sunbeam, etc., £4; the above are genuine E.I.C. standard fitting magnetos.

BOSCH D.A.L. Magnetos, soiled only, otherwise as new, 1-cyl., suitable for any stationary engine or big single, £3/15; twins, any degree, ready to drop on Indian, Harley, or any big twin, £4/5; powerful spark at low speed. All the above magnetos are waterproof, variable ignition, and guaranteed 12 months; postage 1/6.

RELANCE Magneto Repairing Co. hold one of the largest stocks in London, and can be depended upon for a straight deal at the right price. When buying it pays to deal with a firm of repute.

RELANCE cordially invite customers to their works to see any of the above on test. Magneto list giving full particulars sent upon application.—Reliance Magneto Repairing Co., 283, St. John St., London, E.C.1. [1071]

CONTACT Points Renewed, guaranteed pure platinum, full thickness; 6/6, or 12/6 pair, return post.—Venimore, 31, Court Oak Rd., Birmingham. [X9914]

JEERON, registered 291298, greatly superior to platinum, for blades, screws, etc., cures misfiring; ebros screws fit Bosch mag., 10/6 pair; old screws, any make, Jeeronised, 4/9 each, return post.

JEERON Contacts, used by Messrs. Collier Bros., Colver, Martin, making world's records.—Jeeron, 38, Herbert Rd., Woolwich, London, S.E.18. [0002]

CONTINENTAL Ignition Repair Co.—We repair Continental magnetos only. By specialising on Bosch, U.H., Eisemann, Mea, Splittorf, Dixie, and Berling magnetos, we can naturally give you better service.

PRICE: Rewinding 18/-, condensers 10/-, platinum screws (Bosch standard) 6/-, remagnetising 2/6, slip rings 6/6, H.T. terminals 4/6. Our price for overhauling a motor cycle magneto ranges between 20/- and 35/-, and never exceeds the latter figure. Guaranteed for 12 months, and redespached to you in 2 days.

CONTINENTAL Ignition Repair Co., 13, Hardwick Rd., Chiswick, London. [2284]

MAGNETO Repairs.—Send your magneto to Palmer's Garage, Tooting. Reply paid, quotation telegraphed on receipt. Quick, efficient repair guaranteed in from 2 to 6 days, usually within 24 hours.—Palmer's Garage, Tooting. [2939]

MAGNETOS.—Thomson-Bennett, clock or anti clock-wise, 42, 45, 50, 55, 180°, and single-cyl. 4-stroke, 50/-; 2-stroke, 45/-; variable ignition, new, waterproof, guaranteed; write for illustrated particulars.—Super Power Co., 81, Northside, Clapham, S.W.4. [3383]

U.H. Magneto Repairs.—We specialise in these magnetos, and can be relied upon to give you good service. AL, BL, AO, KBL, KB2V, KZ2V type spares stocked; prices moderate; 12 months' written guarantee.—Charles Parker and Co., Churchfield Rd., Acton, London. [2764]

NISCO, Ignition Specialists to the trade. Actual manufacturers of spare parts for magnetos, dynamos, etc. Repairs to all makes of magnetos, car lighting equipment, electrical and scientific instruments. All work guaranteed.—National Ignition and Supplies Co., Pugh Works, Shirley Rd., Addiscombe, Croydon. Phone: 455 Croydon. [2381]

RUNBAKEN Repair Services.—Dynamos, magnetos and startera. Huge stocks of spare parts and a modern plant enable us to make a thorough and efficient repair to every make and type. Pack in a strong box, enclose instructions, and address to The Runbaken Magneto Co., Ltd., 115, Gt. Portland St., London, W. Phone: Mayfair 5566. North of England: Derby St., Cheetham, Manchester. The Paris Salon.

ANY British motor cyclist visiting the Paris Salon must first be impressed by its immensity, magnificence, and artistic arrangement. Second impressions concern the exhibits themselves, and the visitor is bewildered by the galaxy of glittering-chassis and sparkling coachwork of the world's leading cars. When, however, he turns his serious attention to motor cycles he discovers that, if the Salon reflects French opinion, the manufacture of motor cycles is regarded as one of the subsidiary industries in the same category as pedal cycles, accessories, and tyres, and allocated a portion of the gallery where effective display is impossible. That is the main difference between the French motor cycle industry and our own; it has not yet been taken seriously, and while these conditions prevail the motor cycle movement in France will be severely handicapped.

Fortunately the British motor cycle industry is large enough to stand alone, and does not have to play a minor part in an exhibition of cars.

As regards the motor cycle exhibits in the Salon we were much impressed by the large number of British makes represented, and they lose nothing in being staged alongside those of our cross-Channel friends. This is not the case with the sidecars, for, in the quality of sidecar bodies, our French contemporaries easily surpass the productions of this country, and, incidentally, at prices considerably lower than the British article. It occurs to us that British sidecar manufacturers would learn much to their advantage were they to make a point of visiting the Salon or any other show where French sidecar bodies are exhibited.

At the present rate of exchange there does not seem much prospect of a large trade in British motor cycles in France, which will be appreciated when it is known that one British 4 h.p. twin-cylindered sidecar outfit costs in France almost as much as a French four-cylinder small car of a make well known in this country.

Head Lamp Dimming Etiquette.

NO question of road etiquette is in a more unsettled state than the vexed one of dimming head lamps when passing other road users.

Of course, the simple solution lies in a perfect anti-dazzle lamp, but if such a device has yet been evolved—and we doubt it—certainly it is not in use to any noticeable extent. From the average motor cyclist's point of view, therefore, the car driver who fails to dim his penetrating beam on the approach of a less powerfully-lighted vehicle is demonstrating his ignorance of the motor cyclist's difficulty in continuing to ride a solo machine into a blaze of light and the subsequent yawning chasm of blackness beyond.

Two cars or a car and a sidecar outfit may approach each other with no great danger, whatever their lights, for they are in stable equilibrium, and may slow down to a crawl without loss of steering way. The unhappy soloist, especially on a wet and cambered road, cannot ride at any speed into he knows not what, nor can he slow to a dead crawl for fear of wobbles in a space of unknown width; moreover, what to a car might be a mere brushing of wing tips, would inevitably result in a nasty spill to a solo machine. The question, of course, is complicated by the fact that the majority of motor cycle lamps, although quite powerful enough to offend, cannot be dimmed readily, although this, of course, does not apply to many of the electrical equipments now fitted to sidecars.

Regarding the whole subject without bias, the inevitable conclusion is that, until efficient anti-dazzle lamps are universal, each road user must base his "policy" strictly on consideration for others. In other words, it is no valid argument for anyone to complain that it is dangerous (to himself) to dim his lamps suddenly; he should reduce his speed. Nor should the driver of an electrically-equipped vehicle switch on again after finding that an approaching driver neglects the courtesy; the latter may be powerless in the matter.

Nearest Standard?

SOME bright lad is trying to start a discussion as to which is the best motor bicycle. It would be more to the point if the discussion centred round the firm which supplies stock machines most nearly equal in quality to the stunt 'buses handled by its own trade riders. I may be wrong, but I fancy that an almost unanimous vote could be obtained on that point, and, if so, the compliment is no small feather in the cap of the firm concerned.

Pilfering.

TIME was when I used to store various small accessories in special leather holsters disposed about the machine. This habit was forced upon me by designers who sent out machines with toolbags too small to carry more than a spare plug and the requisite ironmongery; so my spare carbide, inner tube, tyre repair outfit, and oil gun demanded special receptacles. Twice this summer all these special holders have been deftly emptied by 'lightfingered' gentry, whilst my machine reposed outside—well, outside church. Now I keep them all in my pockets. 'Tis better so.

Cycle Car Detail Work.

I HAVE always urged that the real cycle car boom would not start until cycle cars adopted a more refined type of engine than most of them utilise. A 1,000 c.c. V twin is a lovely engine when it is throttled down on a high gear, which is its normal function on a motor bicycle; it is less lovely when it is stumbling over in free engine, or revving on a very low emergency gear—two occasions when the cycle car occupants are made to recognise that they have an engine. But I would add that the detail work on many cycle cars is skimped, for the simple reason that so much money has already been lavished on the chassis. A friend of mine brought home a new four-wheeler the other day. The bottom gear and the rear springing were out of action when he reached his house—which is separated by one county from the works. In the former case the trouble was due to saving 3d. on a proper yoke and pin joint; in the latter to saving 6d. on raw material. Some enthusiasts

are trying to make cycle cars *too* cheap. There is nothing to be gained by trying to make a four-wheeler appreciably cheaper than the average price of a side-car of equal power.

More About Prop Stands.

THE latest prop stand to arrive is Mr. A. H. D. Alltree's which weighs 2lb. and looks sturdy enough to survive a Scottish Six Days. My enthusiasm for these gadgets has already bored one reader, who sends me a cutting from the *Passing Show*. "How to make a cheap bicycle stand—look for a nice wall." Well, I stick to my guns. If somebody will market a prop stand which does not weigh more than 2 lb., cost more than 10s., and take more than two hands and a foot to operate it, he will enjoy a little healthy trade.

Tent Pegs.

MY moan about the precarious shelter afforded by a tent in a gale has revealed the fact that there are many campers among our readers. They are sundered into two opposed camps. The one camp agrees with me that a 15in. peg is really desirable on certain types of soft ground. The other camp asserts that no gale will tug out 4in. skewers, provided you insert them in pairs, crossed like the letter X, with the guy attached to the peg which is more remote from the tent, and with both pegs leaning backwards at 30°. All I can say is that the short peg merchants should have been my guests in two of my 1921 camps, one on ground which had been ploughed and then parched by this record summer, the other on the dusty sand of a beach above highwater mark.

Broken Forks.

I THINK the times are ripe for some authoritative pronouncement by a steel expert on the safe life of a pair of forks. Many years ago, when motor cycles were fitted with light untrussed forks of push-bike (sorry, I mean pedal cycle) type, two of my best pals were killed by fractured forks. For years afterwards I fitted new forks every second year to any machines which I owned for keeps. Latterly, I

Occasional Comments.—

have had several friends rather seriously injured through the fracture of their forks, though reconditioned war machines appear to have been the culprits in most cases. Is there any simple method of ascertaining whether fatigue of the metal has commenced? If not, how long ought a modern fork of good design and material to last before the metal fatigues?

Pity Me.

I BELIEVE this cross-heading is a quotation from Browning, after he had tried to expound one of his own poems; anyhow, I like to be as literary as I can. I was setting out to say that a reader wants to know

(1.) Why an engine accelerates when you open the throttle. Surely it should absorb as big a charge with the inlet valve open for a long period on small throttle as with the valve opening quickly on full throttle. His friends say he ought to know, but they do not know themselves.

(2.) What single factor produces the initial acceleration when the throttle is first opened wider?

(3.) Why does weak mixture make an engine knock?

Do you know?

Six Days Fuel Records.

THE Bordesley Engineering Co. take strong exception to my remarks about the petrol records in the A.C.U. trials. Their Connaught two-stroke was credited with 132½ m.p.g., and they can produce many letters from clients who obtain 160 m.p.g. in daily work with standard Connaught machines. If the Bordesley Co. turn to what I said, they will find that I did not question the trial consumptions as a whole, or as accurate records in the vast majority of cases. What I said was that, in many cases, the riders obtained unusual economy for the make of machine they were riding by various stunts and wangles, of which coasting down hills and sheltering behind bulky sidecar outfits were quite frequent spectacles. Since the Connaught did not quite achieve its usual mileage per gallon, it is fairly obvious that it is immune from any charge of squeezing the best possible figure out of the rules. But I think harm would result if innocent readers were left to imagine that, under ordinary riding conditions, any amateur would register the excellent fuel economy obtained with all the machines in the trial. In some cases—of which the Connaught is evidently not to be numbered—he would find it quite difficult to get more than half the trial mileage.

Amid the foothills of the Alps. Two tourists on lightweights near the summit of the Col du Bruch, which was traversed by the competitors in this year's International Six Days Trials.

With the Sea on every Side, Varied Scenery and Associations of Quaint and Historical Interest, there is no Limit to the Charm of Mona's Limited Area.

TO the majority of motor cyclists the Isle of Man is just a convenient place in which to hold the Tourist Trophy races. Others know it, or rather Douglas, as a holiday place akin to Blackpool or Margate. A few have visited the island as tourists, and know that its 227 square miles contain much to interest the motor cyclist who explores them and is content to take it easy, for daily runs of a hundred miles are not the rule on Mona's Isle.

Far better is it to make Douglas or Ramsey, Port Erin or Peel, headquarters for the stay, and to explore the island in daily runs at leisure. And what is there to explore?

Let any motor cyclist take a "one-inch" ordnance survey map of the island, let him study it closely and note the suggestions of romance and old history to be found in the large number of tumuli, forts, cairns, stone circles, wells, burial grounds, etc., that are marked in the quaint old Runic type, indicating that the Isle of Man has its links with the ancient past.

Historic Associations.

If we look this up, we find that the Isle of Man was not founded by boarding-house keepers crowded out of North Wales resorts and Blackpool amusement caterers bent on finding a fresh outlet for their enterprise, as some might suppose. It has a highly interesting history going back long before Sir Hall Caine wrote his Manx novels. As before mentioned, the Druidical remains and Runic monuments are numerous. The Bishopric of Sodor and Man is supposed to have been founded by St. Patrick in 447. The island was known to the Romans as Mona, and was repeatedly raided by Norsemen.

During the T.T. week, the present writer, with a colleague and a camera, not to mention a spring

frame Matchless outfit, decided to steal a few hours off the T.T. course to see the island, and although time was limited, sufficient evidence was found to show that a week or a fortnight could profitably be spent, although the island is but thirty-three miles long and twelve miles broad.

The Nature of the Roads.

Every keen motor cyclist will, of course, tour round the Tourist Trophy course, and in doing so he will probably acclaim his admiration for those riders who covered it at such amazing average speeds. No amount of ink either in words or in reproduced photographs can adequately convey the difficulties of the large number of corners the racer has to negotiate, or of the climb up the mountain and the nature of the road which he traverses at such terrific speeds on the descent.

The one-inch ordnance map indicates the various classes of roads by different colours. There are "main routes," "other routes," "roads under 14ft. wide," and "minor roads." On the whole, the main routes are good—not nearly so wide as the main highways of this country—in fact, they may be likened to the British second-class roads—but generally having a good surface. The "other routes" are scarcely roads at all, while those in the third category compare favourably with farm tracks, and the "minor roads" are like nothing on earth.

In exploring the Isle of Man, the motor cyclist will be able to restrict his use of the second, third, and fourth-class roads to short *détours* off the main routes, when he must expect adventure, but may not always find it. A good machine with efficient brakes is essential if the main roads are left, as there are many precipitous descents bordering unprotected ravines.

An old-world village in the south part of the island and near to the Calf of Man.

On one of the expeditions referred to, my companion was the chief of *The Motor Cycle* staff of photographers, and our trip was not quite a pleasure jaunt. Other photographers had been assigned duties on the mountain and far side of the island stretches of the T.T. course. The adventures of one of them have already appeared in these pages.

My companion's assignment included attendance at the start of the race, a dash round the outside of the course to Ballig Bridge, Laurel Bank, Ballacraigne, and Kirk Braddan, thence back to Douglas for the finish. Now to get round to these places on the outside of the course meant negotiating some of the "other roads"; further, it called for open throttle and a confidence in the Matchless

The Calf of Man from Cregneish: Spanish Head is on the left.

to stand a hectic ride over surfaces which would find the weak places. I may say that during the Senior race I was passenger during the business performance of which our first trip was but a route-finding run, and, despite the comfort provided by the Matchless spring frame and the excellent suspension of the sidecar body, my ribs were sore for days through hanging on to prevent divorce-ment from the outfit. However, on the rehearsal trip I was able to take in some of the characteristics of the scenery off the beaten track which we left at Foxdale—a mining village which would make an excellent background for a film play, although neither picturesque nor particularly interesting.

For a time our route lay over roads marked on the map as being "indifferent." It suffices to say they were, but eventually we were some 500ft. up among the ruins of a deserted

Soon after leaving Castle-town Port St. Mary comes into view, nestling on the hills across the bay.

(1) The palace of the Bishop of Sodor and Man, between Kirkmichael and Ballaugh.

mine. A great beam engine towering above our heads intrigued our interest sufficiently to induce us to stop and explore. In the dusk or moonlight a more un-ginny place could not be imagined. The crumbling

(2) Rushen Castle, Castletown, originally a Danish fortress, afterwards the home of the kings of Man, and finally a prison.

(3) A deserted mill at Airy, with a beam engine dated 1843

(4) Sulby Bridge, a dangerous corner on the T.T. course.

(5) Above Ramsey, a scene T.T. competitors seldom look back to view when on their long climb "up the mountain."

building and decaying engine with its rusty rods leaning where they had fallen, the wind moaning in the gaunt roofless building all combined to produce an effect of utter desolation.

The old engine bore the date 1843, and, despite its enormous cylinder, we doubted whether it developed any more power than the best of the 500 c.c. machines which were to be raced the next day.

A study of the map revealed the presence of cairns, tumuli, and ancient forts in the vicinity. Not far away there was St. Patrick's Chair, all to be explored on a future occasion.

The scenery in this part of the Isle of Man is very like parts of Central Wales. The people, too, appear similar to the Welsh, and are certainly just as pious, as anyone motoring on Sunday will discover in the

(6) The glistening whitewashed church at Rushen, near Port Erin.

Touring in the Isle of Man.—

groups about the innumerable chapels and churches and the look of silent reproach one receives.

Whitewash is favoured by most of the farmers, not only for the exterior of their houses and barns, but for the walls bordering their domains also.

Searching for Scenery.

The second expedition was purely in search of scenery, and our route lay chiefly over main roads to Castletown, Port St. Mary, and Port Erin.

We had both been to the island many times, yet our activities had been confined to regions in the neighbourhood of the T.T. course.

We decided, therefore, to find the Calf of Man, and the headland glorying in the romantic name of Spanish Head. Studying the map *en route* one wondered whether we were not in England, for such names as Hampton Court, Richmond Hill, and Southampton caught the eye.

At Ballacurrey we hesitated about taking a side road down Grenaugh Glen to the sea at Port Grenaugh, where there is a tumulus and a fort, but we carried on. At Ballasalla, a few miles further on, we hesitated again before taking the road to Castletown, but the route on the map was marked "other roads." We knew what that signified, and also that we had to traverse some of them, and also of the third and fourth-class, before we found the Calf of Man. There was "a site of battle A.D. 1250" down the "other road," but what on earth the contestants had to fight about we could not conjecture nor could we discover who fought whom.

Castletown was the seat of the Government from the sixth century until the middle of the nineteenth century, and Rushen Castle, in the centre of the sleepy town, and which was a Danish fortress in the tenth century, was long the residence of the Kings of Man. Near here there are ancient burial grounds, more tumuli and forts.

The run from Castletown to Port St. Mary is particularly picturesque, the latter port being in sight across the bay very soon after leaving the ancient capital. Here, as in Castletown, the town was apparently enjoying a siesta, so we pushed on towards our goal. On enquiring the way we were warned by

a car driver that the route included a long steep hill, and he looked doubtfully upon our outfit. This gentleman had evidently little knowledge of the capabilities of the modern motor cycle, for we climbed that hill "on top," and we were still looking for it when we arrived at Cregneish—as sleepy as may be expected from its position on the map.

From Cregneish the road is of the fourth category, and for two miles to the end of the land on the shores of Calf Sound the reliable Matchless was most unfairly treated. Calf of Man was in sight for the whole time—a green island isolated by turbulent water.

Here we halted to sit upon the boulders overgrown with moss and besprinkled with diminutive pink flowers, to gaze upon this separate Isle of Man, which is private property, as we were advised by a notice on a deserted barn on the mainland. Others had been drawn there—a courting couple, and a party of elderly people who might have come from Manchester. Two fishermen hunting for bait completed the picture of sombre cliffs and angry waters—very like a fragment of Cornwall.

It was well worth the two miles of "minor roads" we had covered to reach it. There are dozens of such out-of-the-way beauty spots which can be reached if a motor cycle holiday is taken in the Isle of Man. The map suggests all kinds of weird places. The chasms at Bay Stacka, east of Spanish Head, Fleshwick Bay on the west coast just north of Port Erin, and the disused lead mines to the west of Foxdale. Glen Mayc, a mile or so south of Peel, is one of the most appealing of all Manx glens for the reason that it is natural.

Some Odd Corners.

Then the north end of the island should be worth exploring, and the district between the main road and Maughold Head, north of Laxey.

If one is in search of adventure, it may be found by crossing from one side to the other of the T.T. course, traversing the rough country in the neighbourhood of Snafell.

Undoubtedly there is fascinating country to explore in the Isle of Man, and even on the main roads there are many things to interest, and material in abundance for the photographer's camera.

Number-plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

The Paris Salon.

Elsewhere in this issue will be found a studied review of the varied range of the motor cycles at the Paris Salon, written and illustrated by members of *The Motor Cycle* staff.

Italian Champion Dead.

We regret to record the death of Carlo Maffei, Italy's best known motor cyclist. Maffei fell in the Italian Grand Prix last week and died from injuries received.

Taxes after October 1st.

Do our readers generally realise that only half tax is payable on new motor cycles or sidecars bought after October 1st?

French Motor Cyclists in the T.T.

According to the official journal of the Motor Cycle Club of France, some of its members will make a serious effort next year to carry off the T.T.

Official Anglo-Dutch Awards.

In the Anglo-Dutch Trial, fifteen British contestants gained gold medals, seven silver medals, and one a bronze medal. Of the Dutch team, twelve gained gold medals and eleven silver medals. The special cup winners announced in *The Motor Cycle* last week have been confirmed.

Institution of Automobile Engineers.

The second ordinary general meeting of the session of the I.A.E. will be held at the Chamber of Commerce, New Street, Birmingham, on Tuesday next, the 18th inst., at 7 p.m. A paper will be read by Mr. H. D. Teage on "The Development of the Single-cylinder Motor Cycle." Cards of invitation to admit visitors may be obtained on application to the Secretary of the Institution, 28, Victoria Street, London, S.W.1.

1922 Prices.

Prices of James machines for 1922 have now been fixed as follows: Standard two-stroke lightweight, £60; two-stroke lightweight fitted with separate gear box, £55; 3½ h.p. "sports" twin, £105; 4½ h.p. single, £105; 7 h.p. twin, £125; *de luxe* sidecar, £35; and standard sidecar, £30.

It is promised that a considerable reduction will be made in the price of the Dunelt before Olympia; but for the present 1921 prices will stand, with a guarantee to refund the difference when the new figures come into effect.

British Motor Cycles in France.

There is a splendid array of British motor cycles at the Paris Salon, which lose nothing in being staged in the same building as those of the French industry.

Sunday Competitions in Wales.

Apropos our long-standing opposition to Sunday motor cycle competitions, it is interesting to note that the Cilcain Parish Council has asked the Flintshire County Council to take action to stop the holding of motor reliability trials on Sundays at Cilcain.

Official Nomenclature.

It seems extraordinary that in issuing statistics regarding motor taxation, the Ministry of Transport should refer to motor cycles as "cycles," as all the world knows that the ordinary cycle is not yet subject to taxation, and is still the favoured vehicle which uses the roads without contributing towards their upkeep.

"TWO-STROKE PISTONS."

Recently we published an article on two-stroke piston design; the above example was (more or less) inadvertently omitted! It is the piston of a semi-Diesel oil engine, photographed by the side of a Beardmore-Precision in the Beardmore Oil Engine Works at Coatbridge. Observe the piston ring—of orthodox design if somewhat unusual size—and the mammoth gudgeon pin.

Special Features.

MOTOR CYCLES AT THE PARIS SALON.
NEW BRITISH MOTOR CYCLES
FOR 1922.
TOURING IN THE ISLE OF MAN.

Olympia becoming Too Small.

Owing to the increased number of exhibitors at Olympia this year, there will be a large number of interesting exhibits in the Annexe, which has hitherto been given over to offices and tyre stands.

North London Danger Spot.

A Finchley reader calls attention to the dangerous cross roads at Harrow, where the London-Harrow road bisects the Kingbury road. He considers that an A.A. scout would be much more profitably employed there than at Barnet, and has written to the A.A. to that effect.

Motor Transport at Olympia.

To-morrow is the opening day of the Commercial Vehicle Exhibition, organised by the Society of Motor Manufacturers and Traders, at Olympia, and in connection therewith will be several congresses. That to be held on Monday morning, the 17th inst., at eleven o'clock, should be of interest to all road users, for the subject of the paper to be read by Mr. A. E. Brookes, O.B.E., M.Inst.T., engineer, surveyor, and architect to the Durham County Council, is "Highway Maintenance and Administration under Modern Traffic Conditions."

**Eastern Centre A.C.U.**

Starting and finishing at Ipswich next Saturday, a reliability premiership competition will be held. It will be open to members of any of the nine clubs in the centre.

Surbiton and District M.C.C.

Next Saturday the club will hold a one-day reliability trial, with the Sopwith hundred guinea challenge cup as the chief award. The start will be at the Talbot Hotel, Ripley, at 10 a.m.

Chester and District M.C. and L.C.C.

Until now Chester has not had a motor cycle club, but a promising future should await the newly-formed body, as above—the result of a recent meeting of local motorists at the King's Head Hotel, Grosvenor Road. Mr. John Gamon was elected captain and Mr. J. C. Walker vice-captain. Capt. Hill, 64, Cherry Road, Boughton Road, Chester, is the hon. secretary.

Lincolnshire A.C.

O. B. Hodgson, on a 3½ h.p. Sunbeam, made fastest time in the Thonock Park speed trials on the 1st inst., thus winning the Foster Challenge Vase. The course was one-third of a mile. Results:

350 c.c. SOLO.—Standing Start: 1. Mrs. Mary C. Jennison (2¼ Velocette), 26½s.; 2. F. Cotton (2¼ Douglas), 29½s.; 3. W. E. S. Herring (2¼ A.J.S.), 29½s. Flying Start: 1. Mrs. Mary C. Jennison (2¼ Velocette), 20½s.; 2. F. Cotton (2¼ Douglas), 22½s.; 3. Grace M. Durand (2¼ Douglas), 23½s.

550 c.c. SOLO.—Standing Start: 1. O. B. Hodgson (3½ Sunbeam), 24½s.; 2. Geoff. Staniland (3½ Norton), 25½s.; 3. J. T. Margrave (3½ Norton), 29½s. Flying Start: 1. O. B. Hodgson (3½ Sunbeam), 17½s.; 2. J. T. Margrave (3½ Norton), 19½s.; 3. Geoff. Staniland (3½ Norton), 20s.

UNLIMITED SOLO.—Standing Start: 1. A. E. Robson (8 Zenith), 24½s.; 2. O. B. Hodgson (3½ Sunbeam), 24½s.; 3. L. Peel (7-9 Harley-Davidson), 26½s. Flying Start: 1. O. B. Hodgson (3½ Sunbeam), 17½s.; 2. J. T. Margrave (3½ Norton), 18½s.; 3. Geoff. Staniland (3½ Norton), 18½s.

Kidderminster M.C.C.

Such well-known test hills as Farlow Bank and Flagstaff Hill were included in the club's recent successful trial; and a stopping and restarting test, held on a 1 in 4 gradient, caused some excitement, and was a fine test of the various clutches. There were thirty-five entrants. Results:

"CASTLE" CHALLENGE CUP AND GOLD MEDAL, for best performance of the day.—F. W. Giles (7 A.J.S. sc.), won second year in succession.

SILVER CUPS.—For second best performance, H. Penn (2¼ New Imperial); for best 500 c.c. solo, F. J. Adam (3½ Norton); for best 350 c.c. solo, L. Hemmingsway (2¼ A.J.S.); for best single gear, L. Southwell (3½ Norton).

GOLD MEDALS.—For second best solo, A. Wilkes (3½ Rover); for second best sidecar, S. R. Roberts (7 A.J.S. sc.).

SILVER MEDALS.—J. G. Nixon (3½ Douglas), H. C. Rhodes (3½ Sunbeam), W. Allen (6 A.J.S.), H. Morris (2¼ Diamond), S. Griffiths (3½ Norton), W. Lewis (Castle-Three), and S. Minchell (3½ Triumph).

BRONZE MEDALS.—D. Henry (Castle-Three) and J. Higginson (6 A.J.S. sc.).

Week-end Club Events.

Oct. 16.—Rochester, Chatham and District M.C. and L.C.C. Run to Chislehurst.
Oct. 15.—Eastern Centre A.C.U. Reliability Premiership Trial.
Oct. 15.—Surbiton and District M.C.C. Trial for the Sopwith Cup.
Oct. 15.—Stockport and District M.C. Aze Edge Hill-climb.
Oct. 15.—Midland Cycling and Athletic Club. One Day Trial.
Oct. 16.—Coventry Triangle M.C. Run to Cath-iron.
Oct. 16.—Barrow and District M.C. Hill-climb.
Oct. 16.—Manchester M.C. Closing Run.
Oct. 16.—Halifax and District M.C.C. Run to Aldborough.
Oct. 16.—Eastbourne and District M.C.C. Consolation Event.
Oct. 16.—Woolwich, Plumstead and District M.C. Hill-climb.

Evesham M.C.C.

The club held its second hill-climb on Hipton Hill on a recent Wednesday and Thursday evening. An excellent automatic timing arrangement had been fixed up by Mr. F. B. Bent, and, after a few preliminary mistakes, all went smoothly. Some fast times were done on this steep third of a mile, where the gradient at the crest is about 1 in 9. F. Morrall, on a stripped 4½ h.p. B.S.A., made the climb in 23½s. (the fastest time of the day). The results in detail were:

350 c.c. SOLO.—1. A. Perkins (2¼ New Imperial), 40½s.; 2. J. Jones (2¼ Douglas), 43½s.; 3. F. Jinks (2¼ New Imperial), 51½s.
600 c.c. SOLO (Non-trade).—1. F. Byrd (3½ Norton), 27½s.; 2. P. F. Andrews (4¼ B.S.A.), 28½s.; 3. H. W. Smith (4¼ B.S.A.), 29½s.

600 c.c. SOLO (Members).—1. F. Morrall (4¼ B.S.A.), 23½s.; 2. V. Morrall (4¼ B.S.A.), 25½s.; 3. F. Byrd (3½ Norton), 26½s.

UNLIMITED SOLO.—1. F. Morrall (4¼ B.S.A.), 25½s.; 2. P. F. Andrews (4¼ B.S.A.), 25½s.; 3. C. Lewis (3½ Norton), 25½s.

60 c.c. SIDECARS.—1. F. Morrall (4¼ B.S.A. sc.), 31s.; 2. A. Sharp (4 Triumph sc.), 63½s.

UNLIMITED PASSENGER MACHINES.—1. F. Morrall (4¼ B.S.A.), 30s.; 2. R. Gibben (8 Enfield sc.), 31½s.; 3. N. Bacon (6 Enfield sc.), 42½s.

Loughborough and District M.C.C.

As the result of the club's gymkhana on the 1st inst. in aid of the Loughborough Hospital, a cheque for £20 was handed to the institution.

North-west London M.C.C.

G. Baxter (6 Zenith sc.) was the winner on points of the very successful gymkhana on the 1st inst.; J. D. Sangway (5 Zenith) was second.

Bradford M.C. and L.C.C.

There were thirty-three starters and twenty-five finishers in the recent Merrick Cup Trial, which took the form of three 21½ mile circuits (each non-stop), awards being made, as under, on seconds error from schedule.

1. Merrick cup, J. C. Neilson (4 Harley), 49s. error; 2. silver medal, P. Shaw (3½ P. and M. sc.), 50s. error; 3. bronze medal, W. Moore (3¼ Scott), 56s. error.

Barrow and District M.C.

Fastest time of the day at the recent speed trials was made by G. Bethwaite (3½ Norton), who averaged 67.92 m.p.h. over the kilometre from a standing start. A lady competitor was first in the 350 c.c. class, despite a bad start. Results:

275 c.c. CLASS.—1. L. S. Parker (Velocette); 2. J. Atkinson (Velocette); 3. J. L. Hall (Velocette). Winner's speed, 52.94 m.p.h.
350 c.c. CLASS.—1. Mrs. Roberts (Monarch); 2. L. S. Parker (Velocette); 3. J. C. Deardon (Dot-Jap). Winner's speed, 55.38 m.p.h.

550 c.c. CLASS.—1. G. Bethwaite (Norton); 2. A. Hawkins (Triumph); 3. H. Jackson (Sunbeam). Winner's speed, 66.66 m.p.h.

750 c.c. CLASS.—1. G. Bethwaite (Norton); 2. A. Hawkins (Triumph); 3. H. Jackson (Sunbeam). Winner's speed, 67.92 m.p.h.

1,000 c.c. CLASS.—1. P. Barron (Indian); 2. G. Bethwaite (Norton); 3. H. Jackson (Sunbeam). Winner's speed, 66.66 m.p.h.

UNLIMITED SIDECAR MACHINES.—1. P. Barron (Indian); 2. H. Jackson (Sunbeam); 3. H. T. Wilson (Norton). Winner's speed, 59 m.p.h.

RIDING ATTITUDES.

Two snapshots taken at a recent Basingstoke M.C.C. hill-climb. On the left: A. J. Fleming (4 Harley-Davidson sidecar) changing gear while his passenger is doing his best to eliminate himself in order to reduce wind resistance. (Right) W. Julian (2¼ Lewis) at 50 m.p.h.

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

80 M.P.H. BRITISH BIG TWINS.

Sir,—I have read "Observant's" letters in your respective issues under the above heading with much interest. Who, may I ask, ever suggested that the Brough Superior engine was manufactured by Mr. Brough, as he seems to imply? Surely it is tolerably natural to call an improved 1913 engine (if this is the case) a 1921 model, is it not?

London, N.16.

MORE OBSERVANT.

WHICH IS THE WORLD'S BEST SOLO MACHINE?

Sir,—I quite agree with Mr. A. Arnold that the $3\frac{1}{2}$ h.p. Sunbeam comes on top. But when price has to be taken into consideration, the Sunbeam has to be put on one side. It is a splendid machine; but one has to pay an extremely high price for it. One of the world's best, and which heads the list for value for money, is the $3\frac{1}{2}$ h.p. Rudge. I think everybody will agree with me on this point, and many may say that it is the world's best regardless of price.

I am lucky enough to own a Sunbeam, and, during the last five months, have covered 5,000 miles, and the reliability is nothing short of marvellous. Most of it has been hard riding. For instance, taking one of the many long runs, I rode from London to Wrenbury in Cheshire, a distance of 179 miles, in six hours, including two stops of about ten minutes each, and myself and machine were as fresh at the end as when starting. The same evening I attached my sidecar, and brought the day's run to well over 200 miles. This machine does not need balancing, but holds the road itself.

H. M. MAIN CLARK.

Sir,—For an all-round solo machine, possessing such qualities as reliability, silence, silky running, excellence of finish, durability, etc., I plump each and every time for the $3\frac{1}{2}$ h.p. Lea-Francis, which, in my opinion, is the aristocrat and Rolls-Royce of motor cycles.

EM 940.

Bootle.

Sir,—Mr. Arnold has opened an interesting discussion in his letter on the world's best solo machine.

The Lanchester and Rolls-Royce built up their reputations on three main factors—reliability, comfort, and "finish." I agree that the nearest equivalent in the motor cycle world is the $3\frac{1}{2}$ h.p. Sunbeam. Certainly, for "finish," the firm has no competitor, and I would also call it the most reliable; but for comfort there is room for improvement.

C.J.

Ross.

Sir,—Undoubtedly, the chain-drive Triumph.

For monotonous reliability, economy from all points of view, go-anywhere capabilities, superb detail design, and finish, and value for money, this famous single is unexcelled.

With T.T. bars and a 28in. rear tyre, it is as comfortable, controllable, and fast as any sane rider could desire—and it positively revels in being neglected. Usual disclaimer.

Coventry.

—UMPH.

Sir,—Mr. A. Arnold speaks reverently of the $3\frac{1}{2}$ h.p. Sunbeam. I must state that I had always disliked the single-cylinder machine, though I had ridden such fine examples as the Triumph and the Rudge. One day I had the chance of trying a Sunbeam, and started off feeling that I might be converted. But I have to confess that the single-cylinder could not be disguised, and I have never come across any single that pleases me.

The V twin is even worse; witness the appalling splutter of any American V twins, except at fairly high speeds. The

Bf

English examples certainly are less irritating; but then, think of their tortoise-like gait!

No doubt, I am exceedingly narrow-minded; but I feel that no motor cycle can claim to be a Rolls-Royce if it has anything less than car engine torque, smoothness of running, and complete absence of distinguishable explosions. Therefore, from the Rolls-Royce standpoint, the only motor cycles to be considered are the F.N., Henderson, Stanger, and Scott. The first two are complicated, the Stanger I have not yet tried, but am expecting great things from it. The Scott I know well, and place it far ahead of any other solo machine obtainable. I have never yet heard it seriously contended that there is a more comfortable machine. Its reliability is unquestioned—the last two Six Days Trials are proof. Durability? My own Scott is nine years old, and I recently ran from Bournemouth to Land's End without using low gear, except for starting and through towns. It will take a light sidecar and passenger at 45 m.p.h., though your correspondent is not thinking of speeds. Its purr is a delight to hear. Its safety on the worst surfaces is proverbial.

I am entirely a private rider; but for me it will be a Scott or a Stanger until a four-cylinder two-stroke is evolved.

NORMAN WILLIAMS.

MATCH-LESS ACETYLENE LIGHTING.

Sir,—I notice in your issue of September 22nd Mr. A. S. Lynne Williams presumes that my intention is to light up my acetylene lamps by means of a spark gap "without stopping," thus converting my lamps into explosive bombs.

May I apologise to him for the ambiguity of my English, if that is how he interprets it, as I may say that, being a chemist, I am fully acquainted with the characteristics of acetylene gas, and also having used a spark gap for lighting up whilst despatch riding in France (where I covered more than 50,000 miles) I am quite *au fait* with the *modus operandi*.

I shall arrange a switch for each lamp, and the procedure will be to dismount, with the engine running in neutral, open each lamp in turn, blow into it to disturb the explosive mixture, then switch on and off the relative switch.

I trust this will ease Mr. Williams's mind and others who may have drawn the same conclusion.

W. E. BAINES, M.P.S.

At least nine motor cyclists out of every ten will deplore the slackness of any fellow rider who neglects his mount. To find a winner for the best kept machine at any rally is often a difficult task. Walter Scott, shown above with his Harley-Davidson, was the winner in this respect at the recent rally at Hendon.

COST OF SPARES AND COMPONENTS.

Sir,—It may interest many of your readers to know that one of the best known 7 h.p. American twins would cost, approximately, £500 if assembled piece by piece from spare parts as listed in the current catalogue for the British market. Perhaps the firm whose conscience is pricked by the above fact would care to explain how this comes about. R.B.

London, E.C.4.

Sir,—Knowing the value of your space, I did not intend to communicate again with you on the above subject. I feel, however, that the letter of Mr. Ernest Gelder calls for a few comments.

He agrees right away that spares are more costly when bought separately.

I think he discusses too lightly the cost of assembling a complete machine.

He states that the quantity of replacement parts put in hand from time to time must of necessity be *smaller*, and adds that there is the risk of a *large* number never being wanted. He cannot argue both ways.

Further, he says that competition will always keep prices to a reasonable level. Let me point out that, while there is plenty of competition as regards *complete* machines, there is very little indeed as regards parts. Obviously, the owner of a particular brand has to go to the maker of that machine for his spares. Although a purchaser is aware beforehand what he has to pay for the motor cycle of his choice, he never knows what he will have to pay for spares.

My remarks as to the disparity in the prices for similar parts as charged by various makers is passed over.

I cannot see how, what he describes as an actual bugbear, can be *cheerfully* carried out.

There should be no "moral obligation" to supply spares. It should be a recognised duty. The firm that will stock spares at reasonable prices, and advertises the fact, will eventually get the business. The buyer will be saved at least two big disappointments—delay and unreasonable charges.

London, E.C.14.

POURQUOI.

Sir,—The somewhat bitter complaint of your correspondent "A.X." will lose some point if he is informed that the repair to the bottom back stay of his cycle can be carried out by any really competent engineer at a cost of about 30s. "A.X.'s" machine is obviously a Triumph, and the list price of the lug he has fractured is 21s. 6d. In this case (a very common one) it is ridiculous to fit a complete new stay, when only one new lug is required to be brazed on. 30s., not 68s., please.

GRAY AND LEVIN.

R. L. GANDY.

IMPROVING BUTT-ENDED TUBES.

Sir,—I find it very difficult to purchase butt-ended tubes at the average garage, and one is usually told that they are never asked for now, on account of the trouble they give (which, in my humble opinion, can be avoided).

The average tube is finished off as shown in A, and the "stuck" part is as arrowed. When the tube is blown up this part is stronger than the rest, which expands first, and tends to tear itself away, which, in course of time, it does. On getting a new tube, I always convert it as shown in B, where the "stuck" part is simply as indicated, which eliminates the tearing action.

Two pieces of tin sweated together with solder will easily tear apart, but cannot be separated by an end pull. Again, when testing tubes in water for a puncture, if finished as A, no pressure can be applied, as trouble would appear at the recessed end; but, if finished as B, the end simply blows out, and will stand more pressure than the rest of the tube.

I find a solution made from Dunlop's filling for tyres dissolved in petrol is an excellent adhesive, if the tube has previously been well roughed with sandpaper.

Stoke-on-Trent.

BUTT-ENDED.

(Top) The usual method of making butt-ended tubes. (Below) How "Butt-ended" alters his. (See accompanying letter.)

COLLECTING FRICTIONAL ELECTRICITY!

Sir,—With reference to Mr. L. W. E. Hartley's letter in *The Motor Cycle* of September 22nd, permit me to offer an explanation of "Spark Intensifiers."

In connection with the explanation offered him by a retailer of the device, he may safely take it that such a theory is purely fallacious. Without analysing the theory

of electro-statics, it will be evident that if such a theory was correct, a continuous discharge would take place across the gaps during the whole period that the engine was running, irrespective of the position of the magneto contact breaker.

Dealing next with our correspondent's difficulty in connection with spark gaps in series, I can assure him that there is an advantage

in such a system. The use of such a device is to increase the potential difference between the spark plug points. This is best illustrated by reference to figs. 1 and 2. Fig. 1 is a "sine curve," illustrating the nature of the e.m.f. set up in the circuit depicted in fig. 2. Now, if the source of supply A (fig. 2) is capable of producing sufficient high-tension e.m.f., the intensity of the spark at the gap S (G) is governed solely by the length of that gap. We will suppose that the length of gap is 0.1in., and that the e.m.f. at the instant of discharge is 500 volts: Then, if the gap be increased to 0.2in. the discharge e.m.f. will rise to 1,000 volts, as illustrated by the peak of the curve in fig. 1. Therefore, by fitting an extra gap in series with the spark plug, in addition to obtaining a greater e.m.f. at the points, a sharper and quicker spark is obtained, because the discharge does not occur until the e.m.f. has risen to the maximum value that it is possible for the magneto to produce, instead of starting half-way up the curve, and thereby prolonging the discharge over a considerable fraction of time.

It is assumed, of course, that these intensifiers are capable of adjustment, in order to suit the particular magneto with which they are being used.

COMFORT IN A SPORTING SIDECAR.

Sir,—Why do not manufacturers fit a footrest, or stretcher, more particularly to the lighter sidecars, where the passenger's heels are on the floor?

Such an addition, when the body was under construction, would be quite simple to fit, and would cost but a few shillings, while the extra weight would be negligible; but the increased comfort to the passenger who is thereby enabled to steady himself in his seat instead of being tossed about like a loose parcel may easily be appreciated.

Having contrived such a fitment to my own little 'bus, I commend the idea to other sidecar users, and suggest that manufacturers might themselves test the difference in comfort which it makes.

LH 1005.

London.

SANS CARBURETTER.

Sir,—Can anyone account for the following mysterious behaviour on the part of my 1920 4 h.p. Triumph?

After having decarbonised and reassembled, I pumped some paraffin into the crank case for the purpose of washing it out, and on turning the engine over by means of the kick start, to my great astonishment, it started to fire and kept on doing so until I lifted the exhaust. Note the engine being stone cold. Thinking it might be due to some petrol left in the carburetter, which, by the way, had previously been dismantled, I drained it bone dry, inserted some more paraffin in the crank case, and kick started. It again fired on the second kick. The spark was fully advanced, the petrol and air completely shut off, so at present I am at a loss as to why this should happen. I can vouch for this, as my friend, who also has a Triumph, was assisting me at the time.

(a) How far do you think I could travel on a crank case full of paraffin?

(b) Do you advise me selling my carburetter, as it appears I have no further use for it?

PUZZLED.

Alexandria, Egypt.

EASIER EASY PAYMENT SYSTEMS.

Sir,—I have always made a speciality of meeting peoples' pockets so far as manufacturers' minimum terms allow me to do so, my minimum with a new machine being one-fifth of the total amount, plus interest, as deposit, and the balance payable in twelve, eighteen, or twenty-four monthly instalments.

Only the best of machines are allowed out on the two-year basis, as obviously some of the cheaper models would not allow of sufficient security in the event of payments not being kept up.

H. J. YOUNGS.

Kilburn.

Sir,—With reference to the several letters which appear in your issue for September 29th with regard to the above, we think your correspondents may take it that the present generally accepted terms for easy payment business have been adopted by the trade as being the only terms likely in its estimation to be satisfactory. It has to be remembered that motor cycles differ from most other articles supplied on the extended payment system, in so far as they involve, in addition to the monthly payments, a fairly substantial sum for running expenses and general upkeep, so that it is not sufficient for the intending buyer to feel that he could afford, say, £3 to £4 per month out of his regular income to meet the monthly instalments, but he must also see his way clear to something like a similar amount for his running costs. It is a fair assumption that if such a person has only been able to put by £10 or so without these additional expenses he has been living fairly well up to his income, and would find providing for the instalments and upkeep of a motor cycle somewhat irksome, unless he very materially altered his style of living. This would be bad enough for twelve months, but if continued for, say, eighteen months, the irksomeness is more than proportionately increased.

We think the above are factors which dealers and financial houses who undertake this class of business have in mind; and it must be also remembered that a large number of would-be buyers are probably so keen to become the owners of a motor cycle that they would be inclined to gloss over or under-rate the difficulties of providing for the monthly payments.

However, as your correspondence columns would seem to convey that there is a considerable public wishing to purchase on extended payments if the facilities were increased, and, as one correspondent points out, this might be a means of increasing the trade generally, this company, which can claim to be one of the pioneers of supplying motors on this system, is quite prepared to try the experiment, and will accept orders extending the payments over a period not exceeding eighteen months, one-fifth

of the total cash price to be paid by the customer before the machine is delivered. But, as it has never been the policy of this company to induce the public to undertake obligations which they might ultimately regret, we would suggest that persons wishing to avail themselves of this offer should carefully consider whether they can afford not only the monthly payments but the necessary upkeep in addition.

We would also recommend those buyers who would like to purchase the latest 1922 models to commence putting by for the deposit forthwith, and bank a certain amount each month, or put it to their credit with some firm of standing, so that they may have the necessary sum available when they wish to make their purchase. We are prepared to assist in this way by accepting monthly payments on deposit, and paying a fair rate of interest on them pending delivery of a machine, on the understanding that the sum to a customer's credit can be withdrawn if so desired at any time; there being no obligation to purchase.

THE SERVICE COMPANY (LONDON), LTD.

Sir,—Respecting correspondence in your last issue on the question of easier easy payment systems, we might state that we have in certain cases extended our deferred payment system beyond the usual twelve months period, but have

never increased this beyond eighteen months. Dealing particularly with the letter from "Anxious," we would like to mention that, from our own experience, we have found considerable difficulty in obtaining payment after a period of about one year, and whether this be due to the fact that owners have lost interest in the machine, or whether it can be attributed to some other cause we have not the means of ascertaining; but certain it is that there would be increased difficulty should the payments become unduly extended.

After all, a motor cycle can hardly be compared with furniture, as in the latter case the furniture is purchased and installed, and does not depreciate in its value quite so quickly as a motor cycle, whilst after the furniture is purchased there is no maintenance charge as with a motor cycle; and we have not infrequently found that there is a tendency to purchase machines that clients cannot afford to maintain, and, consequently, here again there is the further difficulty of collecting payments.

In the case, however, of sound references we certainly, so far as the makers' agreements allow, are quite prepared to extend payments to eighteen months should it be of assistance to any prospective purchaser of a motor cycle or sidecar outfit.

GEO. PETTYT,

Maude's Motor Mart,
London, Exeter, and
Walsall.

EIGHTY HAIRPINS IN SEVEN MILES. The Stelvio Pass in Austria—one of the most famous climbs in the world, and surmounted by single geared British motor cycles before the war. The advent of the countershaft gear has introduced a new school of riders, and single gear exponents are disappearing. One is constrained to wonder whether present-day riders would care to climb this pass on a single-geared mount.

SUNDAY COMPETITIONS.

Sir,—As a constant reader, and one who has the greatest respect for your paper, I venture to disagree with your policy and with the opinions of your correspondents about Sunday competitions.

I think your correspondents must either be "men of leisure," who can indulge in competitions any of the other six days of the week, or be rather pharisaical in their observance of Sunday. All modern leaders of religious thought agree that the most beneficent way for a man who sits in a stuffy office all the week to spend the Sabbath is to take healthy outdoor recreation; for, moreover, "the Sabbath was made for man, not man for the Sabbath."

No outcry is made against playing golf or going for joyrides on Sunday. Why, then, is such consternation caused at a harmless little reliability trial? However, the feelings of those holding contrary opinions should be considered. I agree that hill-climbs, with more or less open exhausts, should be repressed on Sundays, as I can quite understand them causing great offence.

GROUSER.

Epsom.

NEXT YEAR'S SIX DAYS TRIALS.

Sir,—I venture to put the following idea regarding the English Six Days Trials for 1922 before your readers, and trust it may have some criticism.

That the trials should start from London and finish at Brooklands, making the outward objective Edinburgh, traversing an outward and return route which might be suggested by the A.C.U.

When the routes are chosen, let each A.C.U. Centre whose area becomes involved be responsible for the marking of the route, the checking of the competitors, and all arrangements for garage, hotels, replenishment, etc. A.C.U. officials to follow up the competitors, collect all reports, and arrive at their findings nightly. The A.C.U. to evolve some method of indicating to the public the position of merit of each competitor as he goes along from day to day. This could be done by the competitor carrying some symbol of his position of merit. This would add greatly to the interest the public take generally in the competition. As it is to-day, it simply looks upon every rider merely as a competitor, but has not the slightest idea as to who are prospective gold medallists and who are not. Some such general scheme would undoubtedly relieve the A.C.U. headquarters of a terrific amount of arduous work; would, of course, be a considerable saving financially to the Union; and would, in my judgment, create an interest and rivalry between the centres concerned, which I think could only tend to foster the good fellowship of the sport and pastime we have all so much at heart. It would likewise save the Union from much criticism which is often most unjustly levelled against it.

T. RUTHERFORD.

SIDECAR CONNECTIONS.

Sir,—The object of the article under the above heading, which was published in the issue of the 15th ult., appears to have escaped the perception of Mr. J. Willey entirely.

Unfortunately, motor cycle design has been evolved largely by those who have had comparatively little appreciation of the difficulties which would be encountered in the actual road performances of their products. Motor cycle design has probably more of that element of compromise which is said to be embodied in all mechanical construction than has any other branch of engineering.

It was with the spirit of compromise prominently before me that I penned the opinions to which your correspondent objects. I arrived at these opinions, moreover, after a prolonged experience and observation of sidecar construction and sidecar usage on the road. During the past two years I have suffered frame breakages on two of my sidecar machines as a direct consequence of what I consider to be a grave defect in almost all sidecar attachments. In both cases the breakages occurred with machines in which sidecar lugs were incorporated on the lines suggested by Mr. Willey.

That one connection (i.e., the back fork connection) should be flexible, or should have vertical movement in the plane of, or parallel with, the sidecar axle, is a contention from which no second-hand references to "masses of contorted tubing," etc., will dissuade me.

Mr. Willey instances the Scott as "a really scientifically rigid chassis." Admittedly the Scott design is excellent; but it is not nearly so rigid as Mr. Willey imagines. The

front triangulation is not in the plane of the blows delivered to the cycle frame from the sidecar wheel, and as it involves three yoke joints, minute movements must take place in any case. (If the front triangulation was rigid, vertical alignment of the cycle would not depend upon the adjustable diagonal tube stay.)

The back fork-end yoke joint has its tongue parallel with the ground instead of in a vertical plane; consequently, the above-mentioned slight relative movements of chassis and cycle frame (all accentuated by steering head play, wheel bearing play, tyre roll, etc.—compromise again!) result in continuous wrenching of this connection, which would be obviated if it was turned through an angle of 90°.

I know of at least three firms which have discarded sidecar lugs on the rear fork ends of their cycles in order to obviate continual fracture. Flexibility, or slight play in a vertical plane, is a *sine qua non* at this point, and would eliminate all too frequent back fork troubles.

Perhaps Mr. Willey is unaware of the fact that all our constructions flex to some extent, for "rigidity" is a very relative term. Certainly, when a sidecar has long front connections and short stiff rear fork attachments there is a considerable variation between the relative movements of the back and front portions of the frame and chassis respectively. The flexing of the front arms, which horrifies Mr. Willey with thoughts of crystallisation, will do no harm, except in conjunction with the comparative inflexibility of the rear attachment, where breakages generally occur.

A sound system of construction is embodied in the Enfield chassis—its main member is rigidly attached to the cycle frame in the nature of a parallel outrigger. If Mr. Willey rides behind an Enfield outfit over a rough road he will receive an eye-opener in the flexing of the transverse chassis members. The Rudge is on similar lines and equally satisfactory.

"If a motor cycle frame will not stand up to . . . a rigid chassis . . . let the remedy be applied to the frame," says Mr. Willey. Surely, my article was written to help those who design, make, or select sidecar chassis to attain that which would do the least harm to existing motor cycle frames which are designed primarily to withstand stresses in the vertical plane. I am convinced that a proper appreciation of non-rigid construction will permit even existing lightweight machines to be used with sidecars without detriment to their frames. To redesign machines to stand up to an attachment is a Gilbertian proposition.

WHARFEDALE.

SUMMARY OF CORRESPONDENCE.

"J.P." and "A.M." (Kilmarnock) wish to thank the party of motorists and the two motor cyclists who kindly rendered assistance in the accident on the Largs and Fairlie road on Saturday evening, October 1st.

A lady rider of a 2½ h.p. Enfield (writing from Trimdon) wishes to thank the Rudge-Multi rider who assisted her to get home with a broken valve on the 20th ult.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cyclist*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"

The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Price net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedy; them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 3/3.

MOTOR CYCLE REMINISCENCES.

By "Ixon," of *The Motor Cyclist*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and

Wales, London (as above). Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

(Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS & REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle," desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

THREE AND A HALF TO ONE GEAR.

? What number of teeth should I require on my engine sprocket to get a gear of $3\frac{1}{2}$ to 1? The rear wheel sprocket has forty-five teeth, the sprocket on the gear box has seventeen teeth, while the clutch sprocket has thirty-five teeth.—J.S.

Twenty-six teeth on the engine sprocket will give you a gear slightly lower than what you require; twenty-seven teeth will give a slightly higher gear.

RESPONSIBILITY OF ROAD REPAIRING AUTHORITIES.

? Is it possible to claim damages from a borough council or corporation for an accident caused through the bad state of the roads in that borough; and also the best method to take action in the matter?—H.W.P.

A borough council or corporation is not responsible for accidents occurring through the bad state of the roads caused by ordinary wear and tear, but if an accident is caused through the negligent way in which a road is being or has been repaired, then such authority is liable. For instance, if through the negligent way a road was repaired there was some excavation left improperly filled in and this caused an accident, then there could be a successful claim for damages.

GEAR RATIOS.

? I have recently had a two-speed Albion gear box converted to a clutch model. Owing to the original sprocket having twenty-five teeth and the new one thirty-two, it has lowered my top gear to $6\frac{1}{4}$ to 1. (1.) How many teeth are required on the flywheel sprocket to raise the top gear to $4\frac{3}{4}$ to 1? There are fifteen teeth on the flywheel sprocket and thirty-two on the gear box sprocket, while the outside diameters of pulley and belt rim are $6\frac{1}{2}$ in. and 18 in. respectively. (2.) Will it do harm to the engine ($2\frac{3}{4}$ h.p. Blackburne) to run it on the present gear till I can obtain new sprocket?—H.E.W.

(1.) Nineteen teeth. It is perfectly easy to calculate the figures required yourself. First multiply the number of teeth or the diameters of all the driving elements and then multiply the similar dimensions of the driven elements; divide the latter product by the former to obtain the ratio. (2.) It will not do the engine any harm to run it on a $6\frac{1}{4}$ to 1 gear.

FOR LIGHTWEIGHT SIDECAR WORK.

? Will you kindly inform me which would be the most suitable lightweight for fitting a sidecar—single-cylinder four-stroke, twin-cylinder four-stroke, or two-stroke? The weight to carry would be about 17 st., and upon fairly level roads. Also, please state the earliest model suitable, as I intend to purchase a second-hand machine for the purpose. Will you also kindly advise if the petrol system would be satisfactory if adapted to a four-stroke flat twin in lieu of the usual method?—A.S.

As a general practice, we do not advise the fitting of sidecars to light machines, unless the manufacturers specially recommend them for such use. For the most part, the frame and front fork construction of the average lightweight motor cycle is not designed to resist the enormous stress imposed by a sidecar attachment. If, however, you persist in the idea, we should recommend that you obtain a machine fitted with a single-cylinder $2\frac{3}{4}$ h.p. engine, preferably with outside fly-wheel if a four-stroke is

selected. The petrol system cannot be applied to a four-stroke machine except to supplement the normal supply to the crank case.

USE OF BENZOLE.

? (1.) What size of jet should be fitted in an Amac carburettor on a $3\frac{1}{2}$ h.p. single-cylinder machine used for solo riding with benzole, and is any special adjustment of the carburettor necessary? Should the level be raised? (2.) Is a mixture of benzole and petrol recommended, or benzole only? (3.) What are the special merits or demerits of this spirit other than effecting economy? Is maximum speed or power affected?—J.R.B.

(1.) The level should be slightly lowered if benzole is to be used exclusively, and the jet may be slightly reduced in size. (2.) There is not the slightest objection to using benzole alone. (3.) Benzole gives a slight increase in power, chiefly noticeable at low speeds. Usually, however, the maximum speed remains the same. The engine very seldom knocks, owing to the slower rate of combustion, and it is possible to run with the ignition well advanced under all circumstances.

WINNER OF A CONTINENTAL CLASSIC RACE.

On a Daytona Beach record-breaking Indian, Kellner won the historic Semmering hill-climb for 1921. He is shown at speed on one of the many curves on the course. A pre-war $3\frac{1}{2}$ h.p. Triumph, driven by the Archduke Rainer Hapsburg, was first in the 500 c.c. class after a keen tussle with several post-war German machines.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"P.J.M." (Blacklion).—Norton Big 4 combination: Speed, consumption, reliability, and remarks in general.

"R.R." (Abingdon).—Flexekas valve guides: Effect on consumption, attention required, and improvement noticed.

"H.P.E." (Doncaster).—Binks, Cox, Degory, or other carburettor on 1921 Scott; also most suitable plug.

"T.S." (Dublin).—Reynolds runabout: General reliability.

"J.H.H." (Ramsey, Hunts).—Sports Sunbeam: Durability, reliability, ease of handling, gears, and speed.

"H.C.S." (Mitcham).—Cox-Atmos carburettor on Scott sylemar.

"V.G.H." (Plymouth).—Beardmore-Precision: Reliability spring frame, climbing, lubrication, and enclosed gears.

"B.A.T." (Wishech).—6-7 h.p. B.S.A.: Petrol and oil consumption, ease of starting, reliability, speed, and climbing.

"T.L." (Morpeeth).—Will this reader kindly repeat his full address to the Editor, so that replies to him may be forwarded?

"J.S.H." (Prestwich).— $3\frac{1}{2}$ h.p. o.h.v. Douglas: Speed, gear ratios, reliability, consumption, quality of material and life of engine parts, and steering at high and low speeds.

"P.R.D." (Oxford).— $3\frac{1}{2}$ h.p. Norton with direct belt drive, with or without Philipson pulley: Ease of control in traffic, climbing, general touring, and life of belt with Philipson.

READER'S REPLY.

LOW PETROL CONSUMPTION.

In your issue of the 15th ult. a querist ("H.R.H.") asks you to disclose the name of a machine capable of doing 130 m.p.g., and in your reply you quote the Connaught, Levis, and Velocette, all of which I know from experience to be most reputable machines. It may interest your readers to know that I have got well over 120 m.p.g. from a two-stroke engine not belonging to either of the three you name. The machine in question is a Calthorpe $2\frac{3}{4}$ h.p. two-stroke, and anybody who has been over the road on which I got this mileage last September must have painful recollections of its atrocious surface. I started from Bundoran, Co. Donegal, and rode to Omagh, Co. Tyrone (forty-four miles), from Omagh to Newtownstewart, and back to Omagh (sixteen miles). This was a journey of sixty statute miles. When leaving Bundoran my tank was full, and lubricating oil was mixed through the petrol at the rate of half a pint to the full tank—a gallon and a pint I think it holds. As I had to go to Dunganon that evening, I considered that a replenishment of petrol would be required to complete the journey, so I called at a garage in Omagh and ordered half a gallon of petrol. The tank took the half gallon, less about a pint. This, in my opinion, was a very creditable performance. Needless to mention, I have no interest in the Calthorpe firm other than that of a satisfied user of one of their serviceable little machines.—P. F. ENGLISH.

Only Experimental.

The windscreen made by A. J. Homer and Son, illustrated in our issue of September 22nd, and shown on an Ariel sidecar outfit, is not being offered commercially as it was made for test purposes only.

Club Secretary's Success.

In addition to being secretary of the winning club at the recent North-West London M.C.C. rally at Hendon, Mr. S. C. T. Nunn was the driver of the $2\frac{3}{4}$ h.p. Connaught sidecar to win the special prize for the most ingenious fitment.

Litton Slack Echoes.

When F. W. James climbed Litton Slack fifty times in succession, Clincher tyres were used; and, as a photograph just to hand proves, only the tread of the rear tyre showed signs of wear. The Velocette sidecar on which G. Denley succeeded in climbing the same hill was a standard $2\frac{1}{4}$ h.p. model.

Six Days Trials Models Obtainable.

The O.K. Junior passenger machine which created so much attention in the A.C.U. Six Days Trial, fitted with all-chain drive and three-speed gear box, is actually in production, and delivery can be made within a few weeks at the 1922 price of 92 gns. Another new model which was tried out in the "Six Days," and is now being offered to the public, is the four-speed P. and M.

In the Cause of Charity.

In two afternoons the decorated sidecar outfit, representing a yacht, which was illustrated in *The Motor Cycle* of September 22nd, carried over 600 passengers. The machine, made and driven by Mr. H. Scott, of Cambridge, was a 5-6 h.p. Rover fitted with Watsonian sidecar; it appeared none the worse for its helpful service in aid of the London Hospital.

Important Dates.

Fri., Nov. 4th, to Sat., Nov. 12th—Automobile Exhibition, Olympia and White City. (See "The Autocar.")

Sat., Nov. 5th—Mid-and Centre A.C.U. Open Reliability Trial.

Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.

Sat., Dec. 3rd to Tues., Dec. 13th—Brussels Show.

Mon., Dec. 26th, Tues., Dec. 27th—M.C.C. London-Exeter London Trial.

Sat., Dec. 31st.—N.W. London M.C.C. Twelve Hours Open Win'er Trial.

Fri., Jan. 27th, to Sat., Feb. 4th, 1922—Scottish Car and Motor Cycle Show.

Consumption Tests in Sweden.

At a trial for consumption held recently in Sweden, the winning machine in the 750 c.c. class was a $4\frac{1}{4}$ h.p. B.S.A., driven by Ivar Savosnick. It covered twenty-five and a half miles on one litre of petrol, which is equivalent to 115 $\frac{3}{4}$ m.p.g.

Gear Box Service.

Owing to the widespread popularity of the Sturmey-Archer gear boxes, the makers have appointed a chain of service agents throughout the country. Any delays due to ordering spares from the works will thus be obviated.

Successful Novices.

Only five sidecars gained gold medals in the Scottish Two Days Trial; and thus special credit attaches to the performance of the two successful Rover drivers, G. Stokes (on a 1919 model) and W. G. Donaldson, who were riding in their first and second trials respectively.

A Correction.

In our report of the Luton Hoo speed trials (page 392, September 29th), G. Read's Enfield machine, which made fastest time of the day, was stated to be an 8 h.p. Vickers engined model; we are now advised that it is engined with a 6 h.p. J.A.P. unit.

Built-up Number Plates.

An exceptionally good line for agents is the Ever-Ready aluminium number plate, which consists of a frame into which separate characters are inserted as required. These plates may be stocked, and with a sufficient quantity of letters and figures any required plate may be made up as required. They are made by the Adams (hitherto the Birmingham) Non-Ferrous Metal Co., of Forward Works, Legge Street, Birmingham.

Successful Closed Trial at Cambridge.

There were twenty-six entries for the recent reliability trial held by Messrs. H. Robinson, Ltd., the well-known motor agents of Cambridge, for their employees. All finished, and the awards were made on times at the secret checks. R. Griswood ($4\frac{1}{2}$ Humber) was the first motor cyclist, and third in the general category. A most enjoyable dinner was held after the event.

"Milestones" in Next Year's T.T.

Readers who visited the 1921 T.T. races will remember the useful John Bull "milestones," which were of considerable value to the competitors during the race. The Leicester Rubber Co. inform us that they intend to do the same next year, and will mark out the course in a similar manner with either mile or kilometre-stones, wherever the race may be held, whether in British territory or on the Continent. We understand that the A.C.U. has sanctioned this scheme.

Found on the Road.

A pair of leather gloves were found in Mitcham on the last Saturday in September by Mr. H. W. Inderwick. The loser should forward a description to him at Woodlands, Crofton, Orpington, Kent.

A Zenith rider also left his gloves in a Singer car in Devonshire, and the owner of the car, Mr. T. S. McIntyre, 225, Uttoxeter New Road, Derby, is anxious to have his address in order to return them.

THE B.S.A. RANGE FOR 1922.

Three New Models: A "Light Six," an 8 h.p. Twin, and a Sporting Single.

IN addition to its already well-known types, the B.S.A. Co. has decided to list three new machines, which differ in detail only from present standards.

An 8 h.p. long-stroke engine (80×98 mm.=985 c.c.) will replace the standard touring 6 h.p. in a machine of almost identical specification. The B.S.A. interchangeable wheels, cast aluminium chain cases, and ample mudguarding, are, of course, retained; but, in addition, a Brooks B500 saddle will be standardised, and a long shoe brake operating in a dummy belt rim will be added. Thus, with the standard expanding rear wheel brake and the front belt rim brake, three methods of retarding the machine will be provided. A further modification consists of screwed nipples in forks and hubs to take the end of a screw-down grease gun. 28×3in. tyres are used. The engine is a larger edition of the 6 h.p. model, and embodies the oscillating mechanical oil pump introduced by the firm; in fact, with the exception of a slight modification

An entirely new B.S.A. model—the 8 h.p. sidecar outfit.

tained either solo or attached to an attractive-looking sidecar of the sporting variety.

Except for the substitution of footrests for footboards, and the fitting of wide

Normally, only one pair of footrests is fitted, but provision is made for a second pair, which also forms an additional sidecar connection. A long, oblong section silencer with dual exit pipes is fitted below the chain stay in place of the usual expansion chamber in front of the engine.

The 4½ h.p. all-chain and chain-cum-belt models remain as before, so that the manufacturers now cater for all types of

A neat expansion chamber fitted to the chain stay of the sporting model 4½ h.p. B.S.A.

motor cyclist, except the lightweight rider. As usual, the finish of the new machines is in keeping with the reputation of the firm.

Of the sidecars, that fitted to the 8 h.p. machine is very roomy and well upholstered, and, in addition to a large locker, there is a luggage platform behind the seat. The springing is most luxurious, and a sturdy chassis is used. At the opposite end of the line comes the simple chassis and streamline shell of the sporting model, which nevertheless offers considerably greater comfort than might be expected from such a racy-looking contrivance.

Broadside view of the "light six"—an excellent double purpose mount.

in the timing gear, and an increase in cylinder dimensions, the engines are practically identical. A luxurious sidecar, with a strongly constructed chassis and very large luggage accommodation, is attached.

The Light 6 h.p. Twin.

The 6 h.p. engine has proved such a success that it is not to be dropped; but it will be fitted to a lighter frame—a modification of the 4½ h.p. frame—and will be known in future as the "light six." Fitted with the same sidecar body as the 8 h.p., but with a simplified chassis, or with a sporting sidecar, the machine retains most of its original features, except that the wheels, though readily detachable, are not interchangeable; 25×3in. tyres are employed. No expanding rear brake is fitted in this case.

The "light six," which made its *début* in the Six Days Trials in the hands of M. C. Breese, is a compact and handy machine, which should be a fast and comfortable solo mount for those who prefer high power.

A third novelty is the Sports model "four-and-a-quarter," which may be ob-

handle-bars, the machine outwardly resembles the standard single; but the piston and connecting rod have been lightened, and lighter flywheels with polished rims are employed.

Despite its adequate mudguarding and complete chain cases, the new sporting B.S.A. has a very speedy and rakish appearance.

MOTOR CYCLES AT THE PARIS SALON.

A Review of the Motor Cycle Exhibits at the Paris Automobile Show. Tendencies in Design. Many British Machines. An International Aspect.

was naturally somewhat of a blow to the French motor cycle trade, but was good for the movement as a whole.

The Future.

It is a little difficult for the foreign observer to foretell the future in a country other than his own, but it is the opinion of those who know France well that there is a distinctly good prospect for the cheap motor bicycle; but it must be cheap, as the young Frenchman is not so well off as the average English youth. It may be light, but it must be robust, because the French roads, especially in and near the great towns, are more bumpy than our own. Owing to the low cost of upkeep there must be a greater demand for the motor cycle at the present time when few can afford a car, but much depends on the roads, and, unless they are put into a good state of repair, and are well maintained, the future of the motor cycle in France cannot be too rosy.

The beautiful, long, straight French roads are much improved since last year, but more work on them is needed, while the great main thoroughfares need building of Tarmac or other hard wearing

THE Paris Automobile Show at the Grand Palais, Champs Elysées, was opened on Tuesday of last week. Without doubt, it is the most magnificent display of the productions of the motor cycle, cycle, and car industries of France (together with representative exhibits of Great Britain, the United States of America, Belgium, and Italy), that has ever been shown at any of the Paris exhibitions, which have been held for sixteen years.

At this time, when we are reviewing the French built motor cycles, we can opportunely refer briefly to the French motor cycle industry. When a glorious British win is recorded on the Continent we are apt to pat ourselves on the back, and think how wonderfully superior British motor cycles are to those made in other countries. Our products are certainly excellent now, but they were not always so. Years ago, when practically every English motor cycle had a French or Belgian engine, France led the way.

The Past.

In those days the names of De Dion and Werner meant perfection among motor cycle engines. Races without number were won by the brothers Collier, then daring youths, who drove their 2½ h.p. De Dion engined Matchless to victory on Canning Town track. That was

a wonderful little engine, most reliable, and though, compared with a modern motor, it seemed a mass of metal, it was a marvel for cool running and efficiency. Curiously enough the De Dion-engined motor bicycle was a rarity in France, though this is, perhaps, not to be wondered at, as the makers' motor tricycle catalogue of those days stated that they were prepared to accept orders for motor bicycles but did not recommend them.

At that time French motor bicycles and their riders were unassailable in their own country. Undoubtedly we owe much to our French friends for their brilliant pioneer work in the days of long ago.

The Present.

At the present moment the French motor cycle industry, like every other, is in a bad way, owing to trade depression, but the French motor cycle movement is on the increase. The reasons for this are interesting. First, the wonderful success of the motor cycle in England has caused the Frenchman to think there must be something in it; secondly, during the late war, he has seen with his own eyes what our machines can do; and, lastly, the end of the war has thrown a number of British and American ex-army motor cycles on the market at a very moderate figure. This

Pulley side of the two-cylinder two-stroke engine-gear unit of the new model Blériot.

material. Provided the exchange is stabilised between the two countries, and the rate is brought down more nearly to the normal, there is hope for British machines to be sold in France. Their quality is much appreciated and fully recognised, as some thousands are in use at the present day. Many French machines are now built on British lines, but while the fact that this must be so is realised, it is evident that a good deal of work yet remains to be done to bring them even to a state of equality with our own productions.

TENDENCIES IN FRENCH DESIGN.

Unconventionality in Engine Design and Frame Construction. Side by-side Twin Engines Favoured. Many Motor-assisted Bicycles.

ALTHOUGH the French motor cycle industry is as old as, if not older than, that of this country, in order to be fair to our friends across the Channel one has to remember that the motor cycle movement in France was practically moribund in 1914. When the re-establishment of peace time industries took place in 1919, the French motor cycle industry was to all intents and purposes reborn.

Viewed as the productions of a new industry, the French motor cycles at the Paris Show reveal an enthusiasm and enterprise which, from the British standpoint, is surprising, to say the least. The English visitor must be astonished at some of the remarkable designs which are so different from what the British rider expects. But it does not necessarily follow that the British idea is right, at least so far as France is concerned. If the French ideal is a machine totally opposite to the British, then several manufacturers have achieved their aim. If, on the other hand, the potential French rider prefers a machine on British or American lines, then the makers referred to are in the same position as their *confrères* of two decades ago. They are pioneers—a much to be praised body of enthusiasts who, unfortunately perhaps, seldom reap any benefit from their labours and ingenuity.

Three Main Classes.

The French motor cycles exhibited at the Grand Palais may be divided into three main classes:

- (1.) The unconventional.
- (2.) The conventional.
- (3.) The motorised bicycle.

Conventionality is generally a matter of viewpoint. What is conventional in England may be unconventional in France; but in this case the use of the terms is quite permissible, for the reason that the unconventional designs are different from any yet produced by any

country. Therefore they are as unconventional to French buyers as they would be to the British. The very English expression "like nothing on earth" was never better exemplified than in several machines at the Salon, but this is not meant in any sarcastic spirit; indeed, to apply the phrase to any design is, at any rate, a tribute to its originality.

We may, therefore, summarise the first group of French motor cycles as being extremely original, although they will depend for their future success upon two main factors—first, their originality,

Pressed steel front forks of the Janoir

which must be proved justifiable by demonstration of some great advantage, whether in cost, economy, or increased comfort; and, secondly, upon whether their unique appearance will be accepted by the buying public.

Now, nine-tenths of British makers appreciate that unconventionality creates a line of resistance difficult to overcome, therefore they avoid it, and one is sometimes inclined to agree with their policy. On the other hand, if there were no

brave spirits willing to face all criticism by launching out on new lines, there would be no advancement. In England, at all events, it has been proved times without number that the soundest policy is to progress by evolution. If 1921 fashions in ladies' attire had been introduced in 1896, the wearers in all probability would have been stoned; whereas, by a process of gradual evolution, what was impossible in 1896 becomes an accepted fact in 1921.

From the Buyer's Viewpoint.

Such designs as the Janoir and one or two others impress one in this light. They are opposed to accepted ideas of to-day, and on that account may be difficult to market commercially.

Thus the main tendency in one section of the French trade may be said to be revolutionary design based on a genuine belief that the public will appreciate the aims of the designers. But often the engineer's sense of proportion goes astray, and we should say that much of the ingenuity of such machines as the Janoir, Lutèce, Louis Clement, Blériot, and Peugeot front wheel drive will be lost on a public which is not composed of engineers. Excellent as are the pressed steel frames of the Louis Clement and Janoir, the buyer may be inclined to ask if they possess any great advantage over their contemporaries having tubular frames. To be justified, an innovation must have some great advantage, and, while the engineer may agree that certain machines are excellent specimens of engineering talent, the buying public may demand to know whether such construction signifies any advantage to them. Is it cheaper? Does it render a machine more accessible, or lighter, or easier to control? It is not sufficient to claim that pressed steel is better than tubes. Buyers require to know why, and answers based on theories carry little conviction nowadays.

Two unconventional designs. (Left) The pressed steel Janoir, with 8 h.p. flat twin engine. (Right) The Lutèce, which has a side-by-side twin engine (built integral with gear box), shaft drive, and car type springing

Motor Cycles at the Paris Salon.—

Such is our view of unconventionality after contact with the motor cycle movement since its inception.

The Conventional Designs.

In passing on to the next group of motor cycles—the conventional types—one can summarise them in a very few words. Mostly they are fairly good imitations of popular British makes, using in some cases well-known British components in the usual British way, but in doing so the makers have perpetrated some of the errors of British makers of a decade ago.

It is not with such makers, however, that the rise or fall of any industry is dependent, and their sphere in the world of wheels is to supply a known and existing demand, and not to seek to advance the motor cycle movement. They neither make nor unmake history: they merely assemble well-known units, and compete with their *confrères* using the same units only on matters of price, equipment, or finish. Engine and gear unit manufacturers make the entry of small motor cycle makers into the industry quite an easy matter, and it is therefore not surprising that several of these

Bleriot 500 c.c. side-by-side twin four-stroke, which embodies a concealed rear springing system. The disc wheels are built up from steel pressings.

stroke engine may induce many firms to fit that engine, but the chances are just as much in favour of another engine maker who markets a four-stroke. In England, the J.A.P. four-stroke and the Villiers two-stroke are fitted by the majority of "assemblers"; in France the Ballot two-stroke and the Zurcher four-stroke occupy similar positions.

As in Great Britain, this section of the industry prefers not to specialise on any particular model, but offers both four and two-strokes, with and without two-speed gears, and, in the former types, with the option of clutch and kick-starter.

Auxiliary Engines.

Any visitor to the Grand Palais must be impressed by the large number of small engines fitted as auxiliary power units to pedal cycles. In this category we have conditions entirely different from those prevailing in the first two groups already referred to. Undoubtedly the number of these small units reveals the real crux of the whole position of the French motor cycle movement. France is a great cycling country and always has been, and it is considered that the greatest demand for power-propelled machines will eventuate from ordinary every-day cyclists.

Pressed steel construction of the Louis Clement front fork.

machines are fitted with English-made power units and gear boxes or the engines and gears of component manufacturers in France.

The apparent popularity of any particular type is not entirely genuine, if judged by assembled machines, as one maker producing, say, a really good two-

An improved detail of the French A.B.C.: extensions to the leg guards. Observe the clock and speedometer on either side of the lubrication indicator.

The Gnome-Rhône, a machine which conforms to British ideas of clean design and finish. The engine has an outside flywheel and the gear fitted is a Sturmey-Archer three-speed.

that to the purchaser with, as yet, undeveloped ideas of what is, and what is not, approved engineering practice, all are equally attractive.

In this section the many makers appear to have deliberately set out to avoid perpetrating anything similar to their competitors, and it is impossible to say that there are any particular tendencies, for the reason that no maker has tackled the proposition in the same manner. It is astonishing the number of ways and means that can be adopted with a little ingenuity, and the French are nothing if not ingenious. Thus at the Paris Show there are tiny two-strokes and four-strokes utilising every form of mechanical transmission. Perhaps friction drive is a little more popular than any other, for one has a small pulley engaging with the front tyre, another a flat pulley in contact with a flat faced rim on the side of the rear wheel, and a third within the hub of the front wheel. Some have belt drive, others chain or gear transmission. Some

Motor Cycles at the Paris Salon.—

are fitted in the frame, others on the carrier, or on the handle-bar. The majority are two-strokes, and of the four-strokes some have automatic inlets and some are at the other extreme with mechanically operated overhead valves and detachable heads; and they are placed in all positions, vertical, inclined, horizontal, and even "upside down."

General Impressions.

As is to be expected from a nation so long identified with the manufacture of pedal cycles, the cycle work of most of the French exhibits is exceptionally good, but with a few exceptions, the mudguarding is capable of great improvement. Tanks, too, are somewhat rough, but strike one as being constructed of much stouter material than those of British machines. Welded frames appear to be much favoured, and very excellent results, so far as appearance is concerned, are obtained. The locking ring on the steering heads is usually knurled, while the detail work of forks is good.

while these have a good appearance when new do not assist cleaning, as they present so many sharp projections to catch the cleaning rag.

Brakes.

French motor cycles are not well equipped with regard to brakes. On a large number of machines only one brake is fitted, and where the equipment includes two brakes they are usually fitted to operate on the same belt rim. In a few cases the brakes are side by side, one working in the V of the rim and the other on the flat extension between the V and the wheel spokes. Internal expanding and the external types are in evidence on the newer designs, but, taken generally, the brake work is not what one would expect from France. At least one solo machine has a hand brake similar to the clutch lever of an American machine.

**TWO
CONVENTIONAL
FRENCH
MOTOR CYCLES.**

The Magnat Debon, a 400 c.c. four-stroke with overhead valves. It has a two-speed gear, chain-cum-belt transmission, and a cone type clutch. The design appears to be somewhat spoiled by the single forks fitted.

The Terrot two-stroke, an exceptionally well finished machine, following more or less conventional lines. Observe the square fins, and the spare petrol tin and circular tool box on the carrier.

Front Forks.

The kinds of front forks are many, and the majority are of the type which embodies blades hinged or pivoted directly below the steering column, and not a few utilise the principle of the well-known Triumph fork. Not a few have forks of the parallel link type on the lines of the Druid, while the well-known British fork units—Druid, Brampton, and Saxon—are included.

Tyres.

Taken on the whole, the size of tyres adopted is ample for the weight of the machine. In one case 710×90 mm. tyres are used, which, so far, appear to be the largest tyres yet used on a motor cycle.

Almost without exception, mudguards are insufficiently valanced, especially front guards, which generally have no valances at all forward of the forks. Silencing, too, has not received the attention due to it, and usually very small silencers are fitted, which are equipped with cut-outs.

In several designs means have been adopted to minimise faults where eradication should have been attempted. For example, the Peugeot Co. are responsible for a front fork, which requires a rubber buffer to prevent shock when the forks strike the head.

Name plates in lieu of transfers are fitted to many of the machines, and

**THE PARIS SALON AT A
GLANCE.**

Features of 1922 French Motor Cycles.

Pressed steel construction.

Welded tubular frames.

Side-by-side twin engines.

Superb sidecar bodywork.

Auxiliary engines numerous.

Nearly thirty British makes represented.

Spring Frames.

It is to be expected that as bad roads are rather more the rule than the exception in France, designers would give consideration to the question of spring frames. The A.B.C. and the three newer designs (Janoir, Lutèce, and Blériot) are so equipped; therefore one may conjecture that there is a tendency in this direction.

Engines.

The details given below will show the tendency in engine types, and will reveal the surprising fact that probably the most unsuitable type of engine for motor cycles, the side-by-side twin, is represented by four different machines, while the well-tried V twin so general in this country is used as the power plant for a like number.

SINGLE-CYLINDER TWO-STROKES are fitted to the following motor cycles: Terrot, Peugeot, Soyer, Motosolo, Plaston, Alcyon, Thomann, D.F.R., Yvels, Louis Clement, Supplexa, Blanche Herminie, Armour, and Labor.

SINGLE-CYLINDER FOUR-STROKES to the under-mentioned: Griffon (two types), Ultima, Gnome-Rhône, Magnat, Labor, Otobiron, Alcyon, Thomann, Armour, Yvels, and Viratelle.

SIDE-BY-SIDE TWINS.—Four-strokes: Blériot, Lutèce, and Viratelle. Two-stroke: Blériot.

V TWINS: René Gillet, Griffon, Alcyon, and Oriol.

FLAT TWINS: A.B.C. and Janoir.

WATER-COOLING is favoured by the makers of the Motosolo and Viratelle (two types).

OVERHEAD VALVES: Griffon, Magnat, and Otobiron.

Considering that at least three large engine unit manufacturers—Anzani, Train, and Sicam—all have remarkably extensive ranges of engines, which would permit every assembler in

France to have a distinctive type or size to himself, one cannot help but marvel how the temptation has been resisted.

French engine design deserves every commendation, and many different two and four-stroke models are available. French motor cycle assemblers have the choice of several sizes in all types, including flat twin four-strokes from about 200 total c.c., several sizes of single-cylinders, and a variety of V twins from 750 to 1,100 c.c.—some with overhead valves, and both air and water-cooled. In two-strokes there are singles and side-by-side twins of several sizes, also obtainable either air or water-cooled.

The rear position for the magneto is favoured by most of the French manufacturers, while in the case of single-cylinder engines an inclined position appears to be preferred, but this apparent tendency is misleading on account of so many fitting a proprietary two-stroke engine, which is designed to be so located in the frame.

Seventy Different Makes Represented.

Excluding the dozen or so auxiliary motors, no fewer than thirty French makers of motor cycles are exhibiting at the Paris Salon, a really excellent entry for a young industry. In addition, there are examples of Belgian, American, and Italian productions, besides nearly thirty British makes of motor cycles and sidecars on view.

THE EXHIBITS DESCRIBED—THE UNCONVENTIONAL TYPES.

UNDER this heading reference has already been made to the Janoir motor cycle; and as an unconventional machine it certainly takes first place. As will be seen from the illustrations, it not only employs a pressed steel frame, but its general outlines are quite the reverse of the accepted idea of what a motor bicycle should look like. It is sprung fore and aft on leaf springs, and a spring saddle is not considered necessary. We described an earlier model of this ingenious design at the time it was exhibited at the last Paris Salon, and our illustrations suffice to show its main points of interest. The sidecar, which is marketed with it, also has a sprung axle.

Car Practice.

The Lutèce is unconventional in another direction, and conforms more to accepted motor cycle practice plus certain features borrowed from the car. It has a vertical twin engine with gear box integral with the crank case, and the final drive is by shaft. Like the Janoir, it is sprung at the rear on leaf springs, but no torque rods are fitted, and stays, pivoted at the rear of the saddle, are intended to ensure lateral rigidity.

The Louis Clement is another pressed steel machine which made its *début* at the last Paris Show, and which now appears in an improved form. In 1919,

Rear springs enclosed in the pressed steel floating members of the Janoir.

however (there was not a show in 1920), a twin-cylinder model was exhibited, and this has been abandoned in favour of a Train single-cylinder two-stroke of 500 c.c. capacity.

Now fitted with a two-stroke engine of 500 c.c., the Louis Clement appears in an improved form. It has pressed steel frame and forks.

Side-by-side twin engines are favoured by the Blériot Company, for, in addition to the four-stroke two-cylinder model now established on the French market, a twin two-stroke of 750 c.c. capacity is introduced this year—finished, in fact, a few days before the Salon opened. Like the four-stroke model, the gear box forms part of the crank case, the clutch is located between the two crank chambers, and there are three speeds and reverse, the latter, perhaps, more by accident than intention, since the power unit was designed for and is fitted in the new French Blériot cycle car. The machine presents quite a good appearance, but there is still a certain amount of experimenting to be done before the model will be offered to the public, such points as economy and silence not yet having had very close attention.

EXAMPLES
AND DETAILS
OF SOME OF
THE UNCON-
VENTIONAL
DESIGNS AT
THE SALON.

Side-by-side twin water-cooled Viratelle, with radiators on the side of the tank.

The last machine in this group is the Viratelle, which was seen outside Olympia last November. It has a water-cooled side-by-side four-stroke twin engine,

Blériot sidecar suspension system. The arrow indicates the position of the wheel hub.

placed across the frame, with integral gear box, the final drive being by chain. Two circular radiators are located at the fore end of the tank. A single-cylinder model on similar lines is also exhibited.

Another unconventional type—the Blériot two-stroke side-by-side twin. It has two crank chambers with a clutch disposed between them, and drives through spur gears in a unit three-speed and reverse gear box.

Motor Cycles at the Paris Salon.—

THE CONVENTIONAL TYPES.

PROBABLY the nicest motor cycle in the Show from the English point of view is the French-built A.B.C. Although unconventional two years ago the design is now so well known that we place it in the category of the conventional. Several minor amendments have been made to the original Bradshaw design. The internal expanding brakes on both wheels are larger, the hot air muff on the induction pipe has been increased in area, and the overhead valve rockers are fitted with extra wire springs. Another addition is an oil circulation indicator fitted on the top tube, and forms the centre of three dials, the speedometer and clock being the other two, neatly disposed at the front end of the tank and protected by inturned extensions of the leg guards.

A Franco-British Machine.

Exhibited alongside the A.B.C. is a new production, the Gnome-Rhône, a taking looking machine quite on English lines. The engine is a four-stroke single of 500 c.c., having an outside flywheel and a cylinder reminiscent of the Triumph. Chain-cure-belt transmission is adopted, with a W.D. type Sturmey-Archer gear. The mudguarding is exceptionally well done, the side extensions being part and parcel of the main guards and of stouter metal than is usually adopted by British manufacturers.

Taken generally, the French makes, with old-established reputations in this country, are somewhat disappointing. One would expect something distinctive from the Peugeot concern, but apart from a novel front wheel-driven motorised bicycle, the Peugeot models are no different from their many contemporaries fitted with proprietary units. Other mediocre machines with old names are the Terrot, Labor, Alcyon, and René Gillet, all of which fit proprietary units. Taken on the whole, they are quite good for the market they are intended to supply, but it seems sad that in an industry that once led the way the pioneers should display so little enterprise.

The Griffon, another well-known French motor cycle, is an exception, and three

distinct types are exhibited. The first is little more than a motorised bicycle, but has a tiny and beautifully made four-stroke engine with overhead valves; the second type is a four-stroke lightweight approximating to the popular J.A.P.-engined lightweight in Great Britain; and the third a V twin of 6 h.p. Both the two last-mentioned models are fitted with Burman gears.

On English Lines.

Previously known as the G.L.—a machine which competed in the 1919 Six Days Trial—the M.A.G.-engined Oriol follows accepted British practice, and some minor details, such as the foot plates and silencer, are carried out in a

One of the several miniature motor cycles, the Monet-Coyon. Machines bearing this name, and engined with small four-stroke power units, are offered to the public in many forms.

very neat manner. On the other hand, the finish of the mudguards is poor.

Such names as Ultima, Thomann, Armour, D.F.R., Supplexa, and Blanche Hermine grade the tanks of quite conventional types of motor cycles, while the Yvels—the winner of the 250 c.c. class in the Grand Prix—is also on view. A machine known as the Motosolo has a two-stroke engine—one water-cooled, with the radiator neatly arranged in the fore end of the tank. The Magnat is a 3½ h.p. four-stroke with overhead valves, and the Soyer a neat two-stroke with detachable cylinder head. The only full-powered lady's model in the show is exhibited by this firm. It is a well-designed machine with an open frame, and a tank which forms a part of the frame. We were informed that there are, however, very few lady motor cyclists in France, which is somewhat surprising considering the activity of French ladies in other outdoor pastimes.

SUPER SIDECARS.

WHEN we say the French motor cycles do not come up to the English as regards design or finish, we may be forgiven, but as regards sidecar bodywork, upholstery, and finish the French have us badly beaten. There is no doubt that quite the finest sidecar *carrosserie* yet attached to motor cycles is now on view at the Paris Salon.

There is a distinct tendency to follow boat design, and one attractive feature is the varnished light wood deck which contrasts pleasantly with the painted or varnished natural dark wood of which the rest of the body is usually built.

There is an excellent example of this on the D.F.R. stand, where the coachwork referred to is by G. Gille, of Puteaux.

Perhaps the highest class example of French sidecar coachwork is to be seen on the A.G. stand, where two bodies at once strike the eye. Of these, one is practical and the other highly and exquisitely ornamental. The practical body is an attractive looking and thoroughly sound piece of work. The chassis is mounted on semi-elliptic

springs, while C springs support the body, which is not only comfortable but of pleasing design.

A special trunk is supplied, which fits behind the body. The hood is quickly detachable and easily folded so that it can be stowed away in a box made for the purpose and fixed near the step. The finish is excellent and far superior to that found in similar examples of this type of work in England. The other body is obviously specially got up for the Show, but is nevertheless interesting, as it demonstrates the length to which luxury sidecar bodybuilding can go. The style is Louis XV., and the body follows closely the design of a luxurious sedan chair. There are the four-pane plate glass windows, the graceful curves and lamps of the same period, while suitable carving (really moulding) and upholstery complete this unique body. The appearance of such a turnout on the Portsmouth

Road would lead to such a scene as might be better imagined than described.

The only full-powered lady's motor cycle in the exhibition—the Soyer. It is of very pleasing design, exceptionally well made, and the tank forms part of the frame. The engine fitted is a two-stroke having a detachable head.

Details of the Blériot two-cylinder two-stroke power and gear unit, showing the lower half of the crank case, the gears, and pistons.

Motor Cycles at the Paris Salon.—

On the Indian stand, the C  l sidecar is well worthy of mention. It is of the two-seated variety, and it must be stated here that until this year double-seated or multi-seated sidecars were unknown in France. Built of steel, there is no doubt that the C  l is not only smart, but quite practical. The front passenger has ample leg room, and the rear passenger enough. Each has his own windscreen, and the hood protects both. It is interesting to note that the front passenger occupies the centre of the body, so that if only one seat is filled the balance is correct. The spare wheel, carried at the rear, is slipped over the tail and carried in a suitable bracket.

Boat Body Building.

A side car on the Lut  ce stand is so like a boat, having a correct bow and a yacht pattern stern, that it looks as if one could rig a small mast and sail, put it in the water, and sail away. The deck is of varnished bird's-eye maple and the hull of mahogany, copper fastened—a very pleasing contrast—and, curiously enough, these boat pattern bodies do not look too uncomfortable. Tony-Bouley show a wide family sidecar with staggered rear seats and a seat in front for the child. The same firm also show a handsome two-seated body, with doors giving access to each seat.

THREE-WHEELERS.

SO far as three-wheeled cycle cars are concerned, the French-built Morgan is the sole genuine example. Four models of this make are shown—two water and two air-cooled. Of the former one is a sports type with a rather deep back to the body, and what seem to be slightly wider seats. The single screen is of rather unconventional pattern, as it is hinged near the top, while no hood is supplied. The other water-cooled model is the touring pattern. The air-cooled Morgan is provided with upright backs to the seats, which do not look too comfortable, and there seems little protection in the low-sided body. A well-finished polished chassis is also shown on the stand, while it is interesting to note that M.A.G. engines are fitted in all cases.

We have thought for a long time that the old forecarriage was dead, buried,

A corner of the A.G. stand showing in the background an elaborate Sedan chair—the most extravagant example of sidecar body building ever exhibited. In front of it are two of the beautifully finished touring models.

and well-nigh forgotten; but Ajasson de Grandsagne has attempted its revival. He argues that the forecar is more safe and more rigid than the sidecar, it only pays the motor cycle tax in France, and has never been tried on a three-speed-cum-clutch motor cycle of modern construc-

This week's AUTOCAR contains a detailed illustrated review of the car exhibits at the Paris Salon, with special reference to the large number of small light cars to which so many French manufacturers are now giving their attention.

tion. He does not seriously intend it for passenger-carrying, but rather for transforming a motor bicycle into a tricycle for winter use and for the transport of light goods in a suitable box carriage. Two examples are shown—one fitted to a Powerplus Indian, in which case the longitudinal members terminate at a point below the saddle, thus avoiding interference with the rear springing; while the other is fitted to a 4½ h.p. B.S.A. The design has been modernised, in so far as the fitting of sprung front axles, coil springs being used.

REAL FLYWEIGHTS.

THE absurdity of the A.C.U.'s term "flyweights" for 250 c.c. machines in the T.T. is emphasised when one examines the tiny auxiliary engines for pedal cycles at the Paris Show. It was suggested to us in the Salon that we should term these machines "microbes."

Detachable spare petrol tank and circular tool box to match on the D.F.R.

Upwards of a dozen types of these auxiliaries are being exhibited, of which probably the Peugeot takes pride of place. It is contained in the hub of the front wheel. The Cyclotracteur is a two-stroke employing a small friction pulley on the

A real dinghy sidecar on the Lut  ce. It is superbly finished in the natural colours of the wood—teak for the hull and bird's-eye maple for the deck.

The height of the Hieriot sidecar appears to be absurd, but French passengers desire to be on a level with their drivers in order to be sociable.

A new English model at the Salon—the 4 h.p. New Hudson, a sound and well-finished proposition, which marks the re-entry of the New Hudson into the sidecar world.

front tyre. The Exshaw is placed on the carrier, and drives by a chain, as does the Auxil; while the Motofly-Voisin is placed "upside down" on the side of the rear wheel. The Monet is used in a variety of ways, from propelling a cycle car to pushing a perambulator bicycle. Cyclette and the Sicam are the names of two others.

BRITISH EXHIBITS.

TUCKED away from the light that reaches the Gallery from the great glass domes of the Grand Palais are to be found specimens of representative British motor cycles. The Douglas has the largest display, and the 3½ h.p. Sports model comes in for its full meed of praise from the French speedmen, who then seek out the black and gold Sunbeam of the type that won the Grand Prix. The Nortons, too, are there in numbers, one of them finished in aluminium paint throughout, which not a few assume to be the winner of the Belgian Grand Prix. The New

Hudsons, like the Douglas range, have a stand to themselves. Here the new 4 h.p. sidecar outfit is on exhibition, and with it we shall deal later. It suffices to say that it is a good-looking, sound proposition, and worthy in every way to mark the re-entry of the New Hudson Co. into the sidecar field.

Triumphs are well known and respected, for their service during the war is still fresh in the minds of French buyers.

It is interesting to note that the number of imported machines exhibited is equal to that of French productions. Among the British machines, Rover, Diamond, and Ariel; Rudge, Velocette, and Raleigh; Enfield, Humber, and Scott;

The Bianchi V twin, quite one of the nicest Continental machines exhibited at the Paris Salon. The engine is of 7 h.p., and the crank case bolts directly on to the horizontal duplex members of the frame. The gear box is fixed to the engine, and, at the rear, is connected by a single lug to the frame, thereby providing a three-point attachment.

B.S.A., N.U.T., and A.J.S.; and Levis, Zenith, and Skootamota, may also be mentioned; while a Grindlay sidecar is shown fitted on the Humber, and Easting wind-

A real hand brake on the D.F.R. Two brakes operating on the belt rim is quite common practice in France.

screens on several machines. America is represented by most of her makes, ranging from the tiny Evans lightweight—one of which is fitted with a baby's sidecar—to the 1,100 c.c. Reading Standard. Indians and Harley-Davidsons are popular big twins; Schickle and Cleveland represent the two-strokes.

BODYWORK THAT IS MAGNIFICENT WITHOUT BEING OVER ELABORATE.

Graceful A.G. family body which has a bird's-eye maple "deck."

From Belgium comes the old-established Sarolea, fitted with a Sturmey-Archer gear, and the well-known four-cylinder F.N. Italy's representative is the Bianchi.

ACCESSORIES.

IN France the motor cycle accessory business has been either ignored or neglected. French firms now depend largely on English carburettors and other parts, so that home-made fittings of this nature are few and far between. It is interesting to note, however, that the best-known French lamp manufacturers are devoting their attention to motor cycle requirements. British lines are being followed, but the finish and design of the majority are behind our own.

B.M.C.R.C. CHAMPIONSHIPS.

Many Records Smashed. Sidecar Race won at 76 m.p.h.

THE five-lap scratch championship races in the six standard classes produced the best afternoon's motor cycle speed work ever seen in this country. Blistering sunshine and a very large gate honoured the occasion, and records were broken wholesale.

The organisation of the actual racing was, as usual, superb. But the management must ask Mr. C. B. Cochran to take a hand if they have the faintest wish to convert motor cycle racing into a popular spectacle.

275 c.c. Solo Championship.

A megaphone warned the starters in each race that "hanging on" would entail disqualification, and that overtaking must be done on the outside wherever possible. J. V. Prestwich (2½ Diamond-Jap) was a hot favourite, with Kaye Don (2½ Massey-Arran) next in demand. Prestwich proceeded to run clean away from the field; and, ignoring many signals to slow down from backers, who feared a valve might go, he won anyhow. Placings:

- | | |
|-------------------------------------|------------------|
| 1. J. V. Prestwich (2½ Diamond-Jap) | m.p.h. ... 62.16 |
| 2. E. Remington (2½ Blackburne) | |
| 3. W. J. Lord (2½ New Imperial) | |
- J. V. Prestwich broke the following records:
Five Miles Flying Record, 4m. 43.9s.=63.40 m.p.h.
Ten Miles Standing Record, 9m. 38.04s.=62.28 m.p.h.

350 c.c. Solo Championship.

The bookies' offers showed that Don was "expected." Remington and Brockbank (2½ Brock-Blackburne) got away best, and the latter headed a fast race for three laps. Just as the layers began to offer fours against Remington, Brockbank stopped, and let Remington in, to win by half the length of the straight. Don had plug trouble. Only three men were able to finish. Placings:

- | | |
|---------------------------------|------------------|
| 1. E. Remington (2½ Blackburne) | m.p.h. ... 69.39 |
| 2. Kaye Don (2½ Massey-Arran) | |
| 3. A. A. Swan (2½ New Imperial) | |

500 c.c. Solo Championship.

Don rode Le Vack's T.T. Indian, and Pullin had fitted an ingeniously balanced air intake to his sports model Douglas. Bailey and Emerson (Douglases) used metal bridges to steady their engines to the centre of the middle frame tube. The anticipated duel between Emerson and Halford (o.h.v. Triumph) was complicated by the pushful Pullin. Halford stole a nice lead by a magnificent get-away, but Emerson and Pullin soon caught him. After three laps Emerson went in front, and won by perhaps 500 yards, reducing the standing start ten-mile record to 7m. 32.6s.=79.54 m.p.h.

- | | |
|--------------------------------------|-----------------|
| 1. J. Emerson (3½ Douglas) | m.p.h. ... 79.8 |
| 2. C. G. Pullin (3½ Douglas) | |
| 3. F. B. Halford (3½ o.h.v. Triumph) | |

1,000 c.c. Solo Championship.

Another gorgeous race! To the general amazement, and thanks mainly to a superb start, an English twin led for the first lap; but Remington (8 Blackburne) was soon passed by Le Vack (Indian), who led on the second lap, only to yield to Temple (Harley-Davidson) on the third. The Harley-Davidson streaked round the track at a frightful speed, and won by at least 100 yards. Placings:

- | | |
|---------------------------------------|------------------|
| 1. C. F. Temple (7-9 Harley-Davidson) | m.p.h. ... 92.47 |
| 2. H. Le Vack (7-9 Indian) | |
| 3. D. H. Davidson (7-9 Indian) | |

Temple broke two records in this brilliant ride, viz.: Five Miles Flying Start, 3m. 6.44s.=96.54 m.p.h. Ten Miles Standing Start, 6m. 34.88s.=91.17 m.p.h.

Baldwin broke a connecting rod; Harveyson had magneto trouble; and Remington broke his wheel rim.

600 c.c. Sidecar Championship.

Though no more than five starters turned out for this race, it was easily the most exciting of the day, and possibly the best ever contested at Brooklands.

Pullin (Douglas sc.), Horsman, and O'Donovan (Norton sc.), raced over the whole five laps in a compact little clump at over 60 m.p.h. Horsman led after the first and fourth laps; whilst Pullin was in front on laps 2 and 3, though there was never more than a few yards in it; and O'Donovan was always with them. On the fifth lap O'Donovan went ahead, and won, to the rage of the bookies, who had stopped laying up fifteen minutes before the start. Placings:

- | | |
|-----------------------------------|------------------|
| 1. D. R. O'Donovan (4 Norton sc.) | m.p.h. ... 62.39 |
| 2. V. Horsman (3½ Norton sc.) | |
| 3. C. G. Pullin (3½ Douglas sc.) | |

1,000 c.c. Sidecar Championship.

This ought to have been another Temple-Le Vack duel; but the Indian refused to start for 100 yards, and the repeated effort caused the engine sprocket to shear not long after. Temple's famous Harley-Davidson, "Mutt," now adorned with a beautifully streamlined aluminium sidecar, led by 100 yards at the end of one lap, and travelled so magnificently that the spectators forgot to deplore the runaway character of his win. Great anxiety was created by a report that Le Vack had gone over the banking, which was fortunately an invention. Placings:

- | | |
|-------------------------------------|------------------|
| 1. C. F. Temple (7-9 Harley-D. sc.) | m.p.h. ... 76.00 |
| 2. D. H. Davidson (7-9 Indian sc.) | |
| 3. O. de Lissa (8 Motosacoche sc.) | |

Temple broke the following records: Five Miles, 3m. 20.81s.=77.98 m.p.h. Ten Miles, 7m. 56.35s.=75.57 m.p.h.

ALL THE CHAMPIONS.

The winners of the various championship races at Brooklands last Saturday. Left to right: J. L. Emerson (3½ Douglas), D. R. O'Donovan (4 Norton sidecar), E. Remington (2½ Blackburne), C. F. Temple (7-9 Harley-Davidson sidecar), and J. V. Prestwich (2½ Diamond-Jap).

A YORKSHIRE STEEPLECHASE.

Boulders, Bogs, and Heather—The Scott Trial.

IN spite of many imitators, the Scott trial still remains in a class by itself as regards sporting events. Perhaps the reason lies in the suitability of the country in the neighbourhood of Ilkley, or perhaps the secret lies in the cheery spirit of the organisers and the thorough sportsmanship of the Yorkshire riders who form the bulk of the entry.

On Saturday last a band of some fifty optimists gathered at Otley in a drizzling mist, of whom twenty-nine only were to survive the course, and many of these were very late. Most of the competitors were mounted on Scotts—old Scotts, new Scotts, Scott Squirrels, and hybrid Scotts—but there was a fair sprinkling of other machines.

A number of machines had exhaust extensions reaching up to the carrier so as to avoid "drowning" in the deep splashes.

Within ten minutes of the start the riders were plunged into Dobpark splash, a deep and rocky stream, with a natural gallery for spectators in the form of a packbridge. Many failed, to the great amusement of the onlookers, and many crossed safely to receive well-merited applause, but perhaps the best crossings were those of L. Whalley (Sunbeam) and J. Baker (Scott).

The real hard work commenced at Grimwith Reservoir, where all signs of a track disappeared, and competitors attempted to follow a line of stakes, picking their way between boulders and bogs. This stretch culminates in a series of gulleys, the last of which formed by a stream.

It was amusing to watch the set faces of the old hands as they approached the obstacle and the looks of blank amazement on the faces of those who saw the course for the first time.

Some machines were already showing signs of damage, and after the long spell

W. T. Brand (4 Triumph) climbing a slag heap in Hebden Ghyll, on the course of the Scott trial.

of low gear work many exhaust notes were distinctly fluffy. Catherick's Danielt had a damaged mudguard. Clapham (Scott) dashed at the obstacle and shed his saddle frame, several had missing footrests, and one carrier was adrift. B. Hill (Velocette), W. Wells (Sunbeam), A. Hill (Triumph), H. Sellers (Sunbeam), W. Edwards (Powell), C. P. Wood (Scott), A. Budd (Triumph), and W. Backhouse (Triumph) made the best performances. Mrs. Knowles, whose very sporting entry had been the subject of much comment, did not arrive, having had the bad luck to suffer from a drowned magnet.

After Lunch.

After the lunch stop, Hebden Ghyll and the track through the Cupola Works was the first item of interest. This section was responsible for at least three falls, Russel King (Scott), G. Townsend (P. and M.), and one of the Velocette riders being unlucky in this respect. Further up the moor an unexpected water hole caused some amusement. Near Grassington F. Moffat (Scott) collided with a cow and retired. Darnbrook Hill was in fair condition, but, shortly after, a humorous youth nearly caused a bad accident by slamming a gate shut in the face of Capt. Knowles, who was approaching at speed on his Norton.

As usual, a small crowd collected to watch the ascents of Park Rash. The hill was in comparatively good order, and caused only a few failures. C. P. Wood, who had now gained the lead from forty-eighth place, came up at a great pace. He was followed by Whalley, whose ascent was equally fine. Jesse Baker (Scott), H. Moorhouse (Triumph), W. Moore (Scott), and W. Clough (Scott) were the star performers.

The crossing of the Nidd was deep, but the bottom was comparatively smooth, so that there was less trouble at this point than was expected. The Scar, however, was practically unclimbable; in fact, not a single rider made a really clean ascent with feet on the rests.

In spite of falls, it was a cheerful group of survivors who assisted Mr. N. Vinter in auctioning a programme signed by C. P. Wood and Mrs. Knowles; the sum of nearly £5 was collected for this work of art, in aid of St. Dunstan's Hospital.

Results were worked out at Burnshall, and prizes were distributed by Mrs. R. Vinter before the breaking up of the party. Results:

Over the Yorkshire moors. Jesse Baker (3½ Scott) bogged near Grimwith Reservoir. Awaiting their turns to cross the obstacle are B. Hill (2½ Velocette), G. M. Townsend (3½ P. and M.), and M. Sedgwick (3½ Sunbeam.)

To Club Secretaries about to plan their winter programmes: see page 456 for particulars of "The Motor Cycle" film.

Entering Hebden Ghyll. M. Sedgwick (3½ Sunbeam) on a "good section" of the route.

BEST PERFORMANCE OF TRADE.—C. P. Wood (3¼ Scott).

BEST PERFORMANCE OF AMATEUR.—J. Whalley (3¼ Sunbeam).

BEST PERFORMANCE ON A SCOTT, EXCLUSIVE OF SCOTT STAFF.—G. Hill (3¼ Scott).

TRADE TEAM PRIZE.—Scott Team: C. P. Wood, H. Langman, and W. Clough.

AMATEUR TEAM PRIZE.—Sunbeam Team: H. W. Sellers, A. R. Naylor, and W. Wells.

CLUB TEAM PRIZE.—Bradford Team: W. Moore (Scott), A. R. Naylor (Sunbeam), and C. B. Haig (Scott).

CONSOLATION PRIZE. — B. H. Catherick (Dunelt).

The following received certificates for completing the course:

B. Dewhurst (Triumph), H. Russel King (Scott), E. C. Eckroyd (Triumph), B. H. Catherick (Dunelt), Jesse Baker (Scott), M. Sedgwick (Sunbeam), J. C. Thompson (Martinsyde), Capt. Knowles (Norton), A. Hill (Triumph), G. M. Townsend (P. and M.), W. Edwards (Powell), H. W. Sellers (Sunbeam), A. R. Naylor (Sunbeam), W. Wells (Sunbeam), J. S. Duxbury (Scott), C. W. Ward (Triumph), A. E. Budd (Triumph), E. H. Wheatley (Triumph), W. Moore (Scott), C. B. Haig (Scott), G. Clapham (Scott), W. T. Brand (Triumph), H. S. Moorhouse (Triumph), J.

Whalley (Sunbeam), W. Backhouse (Triumph), G. Hill (Scott), C. P. Wood (Scott), H. Langman (Scott), and W. Clough (Scott).

NOTES.

As a spectacle, the Scott Trial fails merely because the average spectator will not walk, and dare not ride to the most interesting points.

There are sections of road in the trial, but only where it cannot be helped.

The consolation prize for the man who fell off most often was indeed a trophy. It took the form of a bottle of whiskey with a suitable quotation attached, pointing out that, although in a race all ran—only one obtained the prize.

Amongst the survivors alone we counted fourteen machines with damaged or missing footrests, and there were also—other troubles.

Our sincere sympathies are with Jesse Baker, who fell early in the day, and severely hurt his knee. He pluckily finished the course, and put up a very fine show.

C. P. Wood's average speed was most amazing.

The programmes were—as they modestly claimed to be—priceless. The advertising matter showed a very pretty wit.

In times past herds of sheep and cattle grazed on the peaceful Yorkshire moors; but, as in the case of the buffalo of America, the herds have been decimated by the advancing waves of—well, civilisation!

SUCCESSFUL MIDLAND HILL-CLIMB.

THE Sutton Coldfield Club's hill-climb last Saturday on Penkridge Bank, near Rugeley, turned out a very successful event; and, as it was open to all members of clubs in the Midland Centre A.C.U., the entry was rather large, amounting to thirty-nine in all.

The weather conditions were very favourable; and, as the surface of Penkridge is of Tarmac, and in no way broken up, some fine speeds were attained.

A. W. Thrush's (2¼ Levis) riding position aroused much interest. He adopted the unusual attitude of lying on the top of his machine with his legs crossed over the rear mudguard. Incidentally, he came first on time and formula in his class. Another competitor, although not yet seventeen, who put up a very creditable performance, was G. E. Rowley (2¼ A.J.S.); and quite a number of people requested him to sign their autograph albums.

G. Dance (Sunbeam) was well to the fore again, easily making the fastest time of the day, 30½ s. F. G. Edmond, riding an o.h.v. Triumph for the first time in competition, also did well.

The timing was carried out by means of telephone, and formula results were worked out on a comptometer, and afterwards verified by slide rule. Results:

350 c.c. SIDECARS.—F. C. Greenwood (2¼ Sunbeam sc.), first on time and formula; O. Wade (2¼ A.J.S. sc.), second on time and formula.

560 c.c. SIDECARS.—G. Dance (3¼ Sunbeam sc.), first on time; F. C. Greenwood (3¼ Sunbeam sc.), second on time, first on formula. Non-expert: P. Cheston (3¼ Norton sc.), first on time.

UNLIMITED SIDECARS.—G. Dance (3¼ Sunbeam sc.), first on time; F. C. Greenwood (3¼ Sunbeam sc.), second on time, first on formula. Non-expert: P. Cheston (3¼ Norton sc.), first on time.

250 c.c. SOLO.—A. W. Thrush (2¼ Levis), first on time and formula; J. N. Roberts (2¼ New Imperial), second on time; J. W. Moxon (2¼ Coventry Eagle), second on formula. Non-expert: T. Stone (2¼ Massey-Arran), first on time.

350 c.c. SOLO.—F. C. Greenwood (2¼ Sunbeam), first on time; O. Wade (2¼ A.J.S.), second on time; A. W. Thrush (2¼ Levis), first on formula.

J. C. Nicholls (2¼ Omega (second on formula). Non-expert: J. C. Nicholls (2¼ Omega), first on time.

560 c.c. SOLO.—G. Dance (3¼ Sunbeam), first on time; H. Hassall (3¼ Norton), second on time; F. C. Greenwood (3¼ Sunbeam), first on formula; A. W. Thrush (2¼ Levis), second on formula. Non-expert: F. G. Edmond (3¼ Triumph), first on time; J. C. Nicholls (2¼ Omega), first on formula.

UNLIMITED SOLO.—H. Hassall (3¼ Norton), first on time; F. G. Edmond (3¼ Triumph), second on time; F. C. Greenwood (3¼ Sunbeam), third on time, first on formula. Non-expert: F. G. Edmond (3¼ Triumph), first on time; J. C. Nicholls (2¼ Omega), first on formula.

CYCLE CARS.—H. F. S. Morgan (Morgan), first on time and formula.

RIDING POSITIONS AT PENKRIDGE.

Snapshots during the Sutton Coldfield A.C. speed trials last Saturday. (Left) B. Fidgeon (2¼ Diamond). (Right) P. Cheston (Norton sidecar).

ON THE KENTISH DOWNS.

A Two-circuit Course in the Woolwich Club's One Day Open Trial.

A SUCCESSION of steep hills, separated by stretches of rough by-tracks, found the weak spots in a number of machines in the one day reliability trial organised by the Woolwich, Plumstead and District Motor Club on Saturday last.

Knockholt, one of the prettiest little villages in Kent, was the scene of the start, the lunch interval, and the finish. The trial was approximately 100 miles in length, and at one minute intervals the thirty-four competitors were directed along a well-arrowed route through Sundridge to Ide Hill. York, Toys, and Brasted hills were traversed in succession; but the severity of the latter, however, was accentuated by the imposition of a starting, stopping, and acceleration test.

In this there were few failures. However, the engine of H. F. Edwards's 8 h.p. Matchless appeared to resent the prevailing heat, and partially seized; while the only $3\frac{1}{2}$ h.p. Rudge entered in the trial, ridden by B. T. Seade, also failed, as did Allen (8 Matchless sc.), who burst a tyre.

J. A. Hoults ($3\frac{3}{4}$ Scott) employed a novel idea of tying a piece of string to his stand, which was kicked down when stopping, and deftly pulled up when getting away on first gear.

B. J. Simms (4 Triumph) was the victim of a loose gear change lever bolt, which inappropriately released itself as the first

C. R. Collier (8 Matchless sidecar) on the colonial section between Westerham and Chalk Pit. He is co-designer and co-manufacturer of the Matchless, and co-donor of the premier award which he won.

gear was engaged, thus rendering the machine uncontrollable.

A tricky bit of road was provided before reaching Titsey Church, where a left bend joined the main road for some distance before striking off the trail to Chalk Pit Hill.

This climb is a real "trembler," inasmuch as the frame does quite as much work as the other essential parts of the machine. The surface would have caused some real fun had the gods decreed rain. As it was, however, the loose, dry stones and dust permitted a good grip for the tyres.

Of the group of hills which rise out of the basin in the vicinity of Westerham, Polesteeples caused some difficulty. Succombe, a long hill terminating in a sharp bend at the entrance to Upper Warlingham village, is probably more notorious.

Lady Sidecarist Does Well.

C. R. Collier (8 Matchless sc.) made an excellent climb, whilst a similar machine in the capable hands of Mabel Hardee defied all the terrors of the gradient.

Polesteeples and its hairpin was next negotiated. T. J. Ross (8 Matchless sc.) was the first up, and swung round the hairpin with the same ease as he had climbed the hill. J. Wallis (6 Bradbury) just missed the hedge. H. W. Harrington (2 $\frac{3}{4}$ Douglas) attempted too much speed, and shot beyond the bend, only to return at the bidding of a kindly observer. R. B. Clark was not quite at home on his Matchless and swerved a little at the corner; whilst R. P. Steytler (6 P.V. sc.) just scraped round. A winding route via Cudham then terminated at the "Three Horseshoes" in Knockholt village.

Opinion was divided as to the inclusion of the lunch "scramble" in the trial.

Twenty-five survivors faced the starter for the afternoon's run, which was the identical route followed in the morning. Of these, ill luck befell G. Maund (3 A.B.C.), G. Nott (8 Matchless sc.), W. J. Reynolds (3 A.B.C.), J. R. G. Haill (7

Harley sc.), and H. Chalklen (7 Harley sc.).

A gold medal was awarded to the riders making the best performance in each class, and also for the best performance of the day. The latter was easily secured by C. R. Collier (8 Matchless sc.), who also carried off the "Matchless" Cup.

W. B. Mills (6 Clyno sc.) gained a gold medal in his class, his error being 1m. 9 $\frac{3}{4}$ s. Collier was but 14 $\frac{1}{2}$ s. over time. The team prize went to the A.J.S. riders—F. W. Giles, R. G. Mundy, and W. C. Hemy.

Survivors:

P. Cunningham (3 $\frac{1}{4}$ P. and M. sc.), J. Wallis (6 Bradbury), C. R. Collier (8 Matchless sc.), T. J. Ross (8 Matchless sc.), F. J. Watson (6 Ariel sc.), H. W. Harrington (2 $\frac{3}{4}$ Douglas), Mabel Hardee (8 Matchless sc.), R. B. Clark (7 Matchless), W. B. Mills (6 Clyno sc.), F. W. Giles (7 A.J.S. sc.), R. P. Steytler (6 P.V. sc.), R. G. Mundy (7 A.J.S. sc.), F. O'Brien (8 Matchless sc.), W. C. Hemy (7 A.J.S. sc.), A. Clark (4 Triumph sc.), G. E. Stacey (2 $\frac{3}{4}$ Verus), G. Jenner (4 Norton), and S. A. McCarthy (5 Stanger).

SMALL CARS.

Motor cyclists interested in small cars should read "The Autocar," the parent journal of "The Motor Cycle."

Light, medium, and large cars are adequately covered in its pages. No artificial division of light cars from other types is attempted, or, indeed, is necessary, since the principles of design are identical and the interests of users, whether concerning questions of upkeep, taxation, roads, service or future development, are undivided and common to all.

Thus, "The Autocar"—the pioneer and the largest of all motor journals—forms the only complete record of the automobile movement, by embracing the interests of motorists in general.

Every Friday - - Price 4d.

Chalk Pit Hill again. G. Jenner ($3\frac{1}{2}$ Norton) climbing in an unconcerned manner.

HUMBERS FOR 1922.

A New 75 m.p.h. Sporting Model at a very Moderate Price. Few Alterations in the Touring Machine.

NEXT year the sporting solo rider will be specially catered for by several firms who have hitherto devoted themselves to, and built up reputations on solid, reliable double-purpose mounts. Quite one of the most attractive of these new "sports" models is the 1922 flat twin Humber, which will sell at the wonderfully moderate figure of £100.

In general layout the sporting model differs but little from the standard Humber, which, incidentally, was always a fascinating solo machine. Closer examination reveals several modifications and improvements; and that these have been successful is proved by the fact that the new model has already been timed to do 75 m.p.h. on the road.

A Special Engine.

Aluminium pistons, with two narrow rings at the top, a higher compression ratio, a redesigned camshaft giving a quicker lift to the valves, and completely interchangeable valve pockets are the chief alterations to the well-known 600 c.c. (75×68 mm.) flat twin engine. (It will be remembered that the valve pockets on this engine have always been quickly detachable; but on the touring model the exhaust passages take a downward turn to the silencer, which is unnecessary when long exhaust pipes are fitted.)

Although the standard three-speed gear box with clutch and kick starter is used, no transmission shock absorber is fitted; neither are chain guards, although it has not been definitely decided that these will

Flywheel side of the Sporting Humber, showing the exhaust arrangements.

be discarded. So that the change speed gate will not foul the rider's knee, it has been slightly modified, leaving both sides of the tank clear for the inevitable knee grips. The gear ratios are 4.5, 7.4, and 12.4 to 1. The footrests are adjustable in a very ingenious manner, the various changes of position being located by a peg in a drilled quadrant on the supporting bar.

Most comfortable flat handle-bars, narrow mudguards, a Brooks racing saddle, and 26×2½ in. three-ribbed Dunlop tyres complete the specification of the sporting model.

Detail alterations only have been made on the touring machine, chief of these

being a "breather" on the timing case, which ejects oil vapour on to the primary chain and a cranked gear lever.

Detail Items.

Sump lubrication, with a mechanical pump for retaining the oil level, plus an auxiliary drip feed, a Clandel-Hobson single lever carburetter, and Druid pattern forks have been retained on both models. An all-black finish is an optional item; while, if desired, a Lucas dynamo lighting set, for which a neat, enclosed drive has been designed, may be supplied as an extra. The price of the touring machine has been fixed at £110, or, with Grindlay sidecar, £144.

NEW THREE-SPEED LIGHTWEIGHT.

An All-chain Drive 350 c.c. Rex-Acme for 1922.

FROM all indications next year will be a lightweight year—from the soloist's point of view, anyhow. The 350 c.c. machine with a three-speed gear and all-chain drive, is now a true go-anywhere mount; and realisation of this fact has led the makers of the Rex-Acme to expend much thought on a model of this type to sell at a very competitive price.

In appearance the new lightweight suggests a *de luxe* specification, and it

would be difficult to point out any feature, either in design or finish, which could reasonably be improved were it a matter of much less consideration.

Outside Flywheel Engine.

The power unit is a 2½ h.p. Blackburne engine, and the method of almost wholly enclosing the primary chain—a difficult matter with an outside flywheel—is very neat. Either a two-speed or a lightweight three-speed Sturmey-Archer gear box may

be fitted at option, and a transmission shock absorber is dispensed with by using a Brampton spring link chain for the final drive.

The brakework is simple, neat, and efficient—dummy belt rim on both wheels. The rear brake pedal is conveniently placed, and the hand-operated front brake is smooth and powerful. Illustrating the careful detail design, the footrest bars are independently screwed into a special lug, and the mudguard bridge on the rear stays is shaped to conform with the special section of the 6 in. guard. Equally extensive is the front guard.

Refined Equipment.

Brampton forks, with double vertical springs, are standard, as is a neat, "flat" handle-bar.

Finished in Royal-blue, the tank has unusually good fittings, including the "most visible" type of Best and Lloyd drip-feed, with a flat, circular glass, and large, secure filler caps. It holds about one and a half gallon of petrol.

Another model, which resembles the one under review at a first glance, differs in power unit (a 292 c.c. J.A.P.) and transmission (chain-cum-belt *via* a two-speed gear box). There are also detail differences in the mudguarding, control levers, and spring fork.

Neat lines are followed in the new 2½ h.p. three-speed Rex-Acme.

CURRENT CHAT

(Continued from p. 434).

Reward of Enterprise.

One of the features of the last Olympia Show was the Enfield 8 h.p. sidecar outfit, selling at £160, then a low figure for such a machine. That the Enfield Cycle Co.'s cut price policy was right is now proved by the very excellent balance-sheet just issued, for a profit of £66,155 has been made. Ordinary shareholders secure a dividend of 15% free of tax, and the "A" preference shareholders have had two dividends at the rate of £7% per annum each. A balance of £37,703 is transferred to the Reserve Fund. Such a result is indeed satisfactory.

More Records Broken.

On Friday last V. Horsman, riding a 3½ h.p. Norton, recovered the 500 c.c. class hour record, covering fifty miles in 40m. 27.9s. = 74.14 m.p.h., and 75 miles 644 yards = 73.38 m.p.h. in the hour, an improvement of 1.51 m.p.h. over the record established by J. L. Emerson on a Douglas on September 24th. On the following day, E. Remington on a 2½ h.p. Blackburne covered ten miles (standing start) in 8m. 36.5s. = 69.7 m.p.h. This record stood only for one day, for on Monday, K. Don, riding a 2½ Massey-Arran, covered the same distance in 8m. 25.48s. = 70.22 m.p.h.

"The Motor Cycle" Film.

We have already received a large number of requests for the loan of *The Motor Cycle* film, which has been prepared by us to give clubmen an hour's entertainment such as is impossible to obtain elsewhere.

Imports and Exports.

According to the Board of Trade returns for September, 1,557 "motor cycles and tricarcs" were imported against 35 during August. As the value of these fifteen hundred odd machines is given as £21,448 (or approximately £14 apiece), it would appear that some of them are ex-Army stock. The export figures are not so startling, the most pronounced feature being the decline in number and value of exported British machines compared with August. Detailed tables are appended:

IMPORTS.			
	Aug., 1921.	Sept., 1921	
Number of motor cycles ..	35	1,557	
Value of machines and parts	£12,756	£36,491	
EXPORTS.			
	Aug., 1921.	Sept., 1921	
Number of motor cycles ..	339	425	
Value of motor cycles only.	£44,366	£34,747	
Value of parts	£30,818	£18,841	
Total value	£75,211	£53,588	

Royal Patronage for the Show.

His Majesty the King has graciously consented to give his royal patronage to the seventh cycle and motor cycle show, which opens at Olympia on November 28th next. H.R.H. the Duke of York has announced his intention of visiting the show, probably on Wednesday, November 30th.

Additions to Olympia Exhibitors.

Owing to delay in having a stand allotted at Olympia, the name of the Coventry Eagle Cycle and Motor Co. did not appear on the list published last week. This company is exhibiting on Stand 47.

The Wulfruna Engineering Co. (1920), Ltd., of Wolverhampton, will also be at Olympia.

Forthcoming Midland Open Event.

As already indicated under "Important Dates," an open trial will be held by the Midland Centre A.C.U. on November 5th. It is promised that there will be no secret checks, etc., but that the event will be rather like a good stiff day out of the Scottish Trials. Further particulars may be obtained from Mr. P. W. Bischoff, Sunhoney, Richmond Road, Wolverhampton.

CLUB NEWS.

(Continued from page 435.)

Reigate, Redhill, and District M.C.C.

On Wednesday of last week the club held a petrol consumption test, with the following results:

SIDECAR CLASS.—1, E. P. Duplode (8 Zenith sc.).

SOLO CLASS.—1, Reg. Green (3½ Sports Sunbeam).

Oxford M.C.

No accidents, high speeds, and wonderful weather all contributed to make the speed trials, which were held on Akeman Street, Chesterton (near Bicester), on Saturday last, the most successful event yet held by the club. Classes won by trade riders also carried special awards for amateurs. The distance was one mile from a standing start. Results (in awards: A.=amateur; T.=trade):

CLASS 1 (Sidecars up to 650 c.c.).—1, M. Pearson (3½ Norton sc.), 1m. 17½s. (T.), bronze medal; 2, S. Hancox (4 Triumph sc.), 1m. 18½s.; 3, L. A. Welch (4½ B.S.A. sc.), 1m. 25½s. (A.), bronze medal. Won at 46.39 m.p.h.

CLASS 2 (Sidecars unlimited).—1, I. P. Riddoch (8 Zenith sc.), 1m. 6½s. (A.), silver medal; 2, E. J. Cross (7-9 Harley-Davidson sc.), 1m. 9½s. (T.), bronze medal; 3, A. W. Cross (7-9 Indian sc.), 1m. 21½s. (A.), bronze medal. Won at 54.05 m.p.h.

CLASS 3 (Solo up to 250 c.c.).—1, C. Kimber (2½ Levis), 1m. 22½s. (T.), bronze medal; 2, C. Reyersbach (2½ Velocette), 1m. 23½s. Won at 43.8 m.p.h.

CLASS 5 (Solo up to 350 c.c.).—1, F. G. Oliver (2½ Douglas), 1m. 15½s. (T.), bronze medal; 2, C. Reyersbach (2½ Velocette), 1m. 20½s.; 3, C. Kimber (2½ Levis), 1m. 21½s. Won at 47.62 m.p.h.

CLASS 6 (Solo unlimited).—1, E. J. Cross (7-9 Harley-Davidson), 56½s. (T.), silver medal; 2, F. H. Lewis (3½ Norton), 1m. 5s. (T.), bronze medal; 3, S. Hancox (4 Triumph), 1m. 3½s.; 4, L. A. Welch (4½ B.S.A.), 1m. 7½s. (A.), silver medal.

CLASS 8 (Solo up to 650 c.c.).—1, F. H. Lewis (3½ Norton), 55½s. (T.), silver medal; 2, S. Hancox (4 Triumph), 1m. 2s. (T.), bronze medal; 3, M. Pearson (4 Norton), 1m. 2½s.; 4, L. A. Welch (4½ B.S.A.), 1m. 9½s. (A.), silver medal; 5, E. Colegrove (4 Triumph), 1m. 15½s. (A.), bronze medal. *Fastest motor cycle time of the day (64.75 m.p.h.).

TO CLUB SECRETARIES.

"The Motor Cycle" Film will shortly be available for loan to enterprising clubs who are keen to make their winter social events a success. This exclusive film takes approximately an hour to exhibit, and the programme includes scenes at the Junior and Senior T.T. Races, the 500 Miles Race, the Six Days Trial, and the Grand Prix Car Race. Club secretaries should write to the Editor (Film Department), "The Motor Cycle," Coventry, for a list of open dates.

Basingstoke M.C.C.

It is estimated that 2,000 spectators were present at the highly successful hill-climb held on the 29th ult., formula and time results of which are now available:

FORMULA CLASSES.

600 C.C. SIDECARS.—1, W. Osmond (3½ Ariel sc.).

1,000 C.C. SIDECARS.—1, W. Osmond (3½ Ariel sc.).

275 C.C. SOLO.—1, W. Julian (2½ Levis).

350 C.C. SOLO.—1, W. Julian (2½ Levis); 2, B. Potter (2½ O.K.).

550 C.C. SOLO.—1, H. V. Stevens (3½ Norton); 2, W. Julian (2½ Levis).

750 C.C. SOLO.—1, H. J. Gifford (3½ Norton); 2, W. Julian (2½ Levis).

1,000 C.C. SOLO.—1, G. A. Gammon (3½ Norton); 2, O. W. Tyler (7-9 Indian).

TIME CLASSES.

600 C.C. SIDECARS.—1, A. J. Fleming (4 Harley-Davidson sc.), 1m. 7s.

1,000 C.C. SIDECARS.—1, A. J. Fleming (4 Harley-Davidson sc.), 1m. 4½s.

275 C.C. SOLO.—1, R. Stevens (2½ Douglas), 37½s.

350 C.C. SOLO.—1, H. V. Stevens (3½ Norton), 30½s.

1,000 C.C. SOLO.—1, R. W. H. Davis (8 Zenith), 32½s.

North-west London M.C.

The programme of this club produces several novelties each year. The latest, last Saturday, took the form of a "point-to-point time schedule," the exact position of each check being defined only to the extent of a named circle of a diameter varying from one-half to one inch on the official map. Starting from Edgware, the checks were situated near Aldenham, Ridge, Mill Hill, Kingsbury, and Stanmore. To those familiar with the network of roads at these points, the fact that the winner was far behind schedule will cause no surprise. Many failed to discover the checker at all. Results:

1, T. E. Moon (Douglas), penalty 161; 2, J. D. Sangway (Zenith), 257; 3, D. F. C. Fitzgerald (Norton), 305; 4, Miss Thomas (Morris), 405.

Leicester M.C.

Official results of the Bowerman Cup two-stroke trial have been announced as under:

WINNER OF BOWERMAN CUP: G. Povey (2½ Velocette), 199 marks. Gold medal: G. Denley (2½ Velocette), 196 marks. Silver medal: P. J. Strong (2½ Enfield), 190 marks. Bronze medal: H. J. Woodgate (2½ New Hudson), 189 marks.

GENERAL CLASS.—Gold medal: L. West (2½ Velocette), 197 marks. Silver medal: L. Judge (2½ Velocette), 197 marks. Bronze medal: J. L. Baxter (2½ Clyno), 187 marks.

BEST SIDECAR PERFORMANCE (Expert).—Silver medal: E. Amey (3 Ivy), 182 marks.

BEST PERFORMANCE BY NOTTINGHAM RESIDENT.—Gold medal: J. R. Sylvester (2½ Velocette), 179 marks.

MOST PLUCKY PERFORMANCE (Leicester).—Silver medal: H. Ward (2½ Campion), 171 marks.

BEST PERFORMANCE IN CLASS A.—Gold medal: G. Povey (2½ Velocette), 199 marks.

AN OUTSTANDING PERFORMANCE.—Silver medal: W. Pym (2½ Beardmore-Precision), 185 marks.

TEAM PRIZE (Gold medals).—Leicester Velocette team: A. Bowerman (2½ Velocette), L. Judge (2½ Velocette), and L. West (2½ Velocette), 581 marks gained.

Grip & Long Mileage

BELDAM TYRES have most rubber where it is most needed—hence long mileage. But you get more than mileage: the Beldam design of tread assures a steady grip on the road, and less puncture-liability. And they cost less! More mileage, more safety, more satisfaction—for less money! Ask a user. Booklet "Testimony" sent free on request. Write to-day. Or send a trial order.

Still Putting it off

and why? Why deny yourself that promised Motor Cycle or Combination when the autumn-tinted countryside is *now* at its best,—the most fascinating time of the year? Get that machine *now*!

Firstly

You cannot buy at lower prices than at present.

Secondly

In order to meet the wishes of numerous enquirers, we are temporarily prepared to consider orders on the following terms:

Deposit, one-fifth of the cash price; Balance, in 12, 15, or 18 monthly payments.

These terms are for the autumn and winter months, and only a limited number of orders can be accepted. We trust this offer will bring Motor Cycles within the reach of all desirous of purchasing.

Please write, phone, or wire us your requirements NOW. List of new, shop-soiled, and second-hand Motor Cycles; order form, etc., post free on application.

IN STOCK:

New and Second-hand Models of the following makes:—ARIEL, A.J.S., BROUGH, B.S.A., DOUGLAS, ENFIELD, INDIAN, LEVIS, MATCHLESS, NEW IMPERIAL, N.U.T., NORTON, O.K., P. & M., RALEIGH, RUDEGE, SCOTT, SUNBEAM, TRIUMPH, VELOCETTE, ZENITH, ETC.

U.H. Magneto Repairs.—We specialise in these magnetos, and can be relied upon to give you good service. A1, B1, A0, KBI, KB2V, KZ2V type spares stocked; prices moderate; 12 months' written guarantee.—Charles Parker and Co., Churchfield Rd., Acton, London. [2764]

NISCO, Ignition Specialists to the trade. Actual manufacturers of spare parts for magnetos, dynamos, etc. Repairs to all makes of magnetos, our lighting equipment, electrical and scientific instruments. All work guaranteed.—National Ignition and Supplies Co., Pugh Works, Shilley Rd., Addiscombe, Croydon. 'Phone: 435 Croydon. [2581]

THE Magneto Repairing and Winding Co. (established 1912), contractors to H.M. Government, and officially appointed by the R.A.O. Magneto repairs of every description; all repairs at lowest possible prices, and strictly guaranteed. We can mostly return them within 24 hours. We have several new and second-hand single and 2-cyl. magnetos in stock, all guaranteed.—The Magneto Repairing and Winding Co., 78, Hampstead Rd., Euston, London, N.W.1. 'Phone: Museum 1158. T.A.: Kumagnelec, Ennsrad, London. [6015]

EUSTON Ignition Co.'s 24-hour repair service. Guaranteed repairs to all types of magnetos, Splitdorf and Dixie specialists; official Indian electrical service station; Thomson-Bennett repairs and more. All repairs at tested on an approved A.I.D. test bench before despatch, and therefore carry our guarantee for 12 months. We hold the largest stock of guaranteed magnetos in London, twos all degrees; spare parts for all makes in stock; charged accumulators, all voltages, always ready in stock; plug cables, 1/2-watt and vacuum bulbs, all voltages. We give you real live service always.—Euston Ignition Co., 329, Euston Rd., London, N.W.1. 'Phone: Museum 5034. T.A.: Magdyno, Ennsrad, London. [0263]

The Popular Motor Cycle.

THE statistics recently issued by the Ministry of Transport and already given in *The Motor Cycle* show that no less than 94,000 more motor cyclists paid licences than the number officially recorded in 1920.

While the new system of licensing no doubt makes accuracy more certain, and probably there were a few machines on the road last year upon which no taxes were paid, the enormous increase is remarkable. Every manufacturer will agree that the present year has not been so successful as it might have been, and there is a tendency in some quarters to discredit the accuracy of the figures; but the revenue obtained speaks for itself—the average tax is £2 7s., and the total revenue from motor cycles £875,700. Nevertheless, the increase this year in numbers is over 25% of the official figures for 1920. The figures reveal a very satisfactory state of affairs and emphasise the great popularity of motor cycles.

In America the tendency is quite in the reverse direction, which may be attributed to the failure of the American industry to realise that the motor cycle's greatest feature is its economy. In the U.S.A. very few of the mediumweight and lightweight types, so popular in this country, are made in any quantity.

The total revenue derived from the new taxation already exceeds the £7,000,000 "budgeted" to road users and upon which the taxation schedules were based. It is natural that motor tax payers should be curious as to the purposes to which these extra millions will be put. Are they to be spent on improving the roads, and so contributing to the solution of the present unemployment problem?

Another question motorists will ask is whether, in view of the surplus this year, taxes will be reduced in the future? *Everyone in this country is severely over taxed, and the burden on the country is one of the reasons for the present trade depression.* A reduction in motor taxes next year would materially assist the motor industry to find

employment for thousands of artisans now doing nothing, increase the number of vehicles on the road, and so help to circulate money in every part of the country.

Price Reductions.

ALMOST every post brings us notifications of price reductions of motor cycles and accessories. By the time that the Olympia Motor Cycle Show opens, the price level for 1922 will have been reached and business should resume a more normal aspect. At the present moment, it is an undoubted fact that a number of prospective buyers are withholding their orders in anticipation of a substantial drop in costs; in addition they are awaiting with interest the introduction of new models.

It is perhaps rather early to make an accurate forecast of the Olympia Exhibition, but it is safe to say that the general tendency will be towards the production of cheaper machines than to the introduction of startling novelties.

In a way, this is all to the good, provided that the movement is not overdone, to the detriment of development. It is clear, for example, that, if manufacturers were influenced only by the public clamour for cheaper machines, we should arrive at a stage where small tyres, and poor fittings and workmanship, would be the rule, and real progress in design would stagnate.

Fortunately, the British motor cycle trade as a whole is far too sensible to follow such a short-sighted policy, and has a reputation of excellence to maintain; we may rely also on the brains of some of our designers to produce new models which will show a definite advance over past practice.

In spite, therefore, of the recent trade depression, there is every reason to expect that 1922 will mark a very considerable improvement in the motor cycle trade. Lower prices of motor cycles, petrol, oil, tyres, etc., will add very considerably to the number of those who will be able to afford to enjoy the cheapest and most pleasant form of locomotion.

OCCASIONAL COMMENTS "By Ixion"

Why Gates are Small.

FROM a correspondent:

"Having nothing particular to do on Saturday, October 8th, I decided to take a party over to see the B.M.C.R.C. championships at Brooklands. The snag was that we did not know what time the first race was billed to start. We searched carefully through the current and back issues of all the technical papers. We hunted in vain for even a one-line advertisement in the daily newspapers. We enquired at the local L.S.W.R. station. We turned up the official programme of an earlier meet, when the first race had kicked off at 2 p.m., but, of course, this was no guarantee that the championships would commence at 2 p.m. Finally, having no idea whether the meeting opened at noon or at 2 p.m., we went off to see a professional soccer match. The soccer people take care to let everybody know when they are going to kick off, so they get the gates. I have often found myself in a similar difficulty about club hill-climbs, etc., and I really marvel that secretaries do not keep *The Motor Cycle* informed in advance of the hour as well as the date of their fixtures."

'Nuff sed?

Wanted, a Showman.

WHEN I meditate on the varied spectacles with which Brooklands has provided me this summer, I feel that the management really needs a heart to heart talk with a professional showman, i.e., somebody who has first lost and then made money by attempting to draw the public to a spectacle which they originally regarded with indifference. Let me say frankly that I vastly prefer a B.M.C.R.C. meet to one organised by the B.A.R.C. The pros of the motor cycle events are that the spectators are massed at the fork, where they can watch the start, the race, and the finish without padding wearily about on unyielding concrete, or clambering up precipitous hills; and, secondly, that the races are often fairly lengthy, so that the riders' fortunes undergo kaleidoscopic changes, as do also the tempers of the bookies. Against the B.M.C.R.C. one must, however, urge several incredible facts. They furnish not one square inch of shelter from the Brooklands sun, which is several million more B.Th.U. than any other sun this side of the equator. They compel one to go a mile to obtain food or drink, an excursion for

which the programme makes no allowance. They endeavour to keep their events as secret as a new tank in 1917. They divide the small territory at the fork by several barriers, so that even if one sports the badges of a judge, timekeeper, and pressman, mobility would be difficult, even if visitors' cars and cycles were parked, instead of being stuck down anywhere and everywhere. Nevertheless, I thoroughly enjoy the average B.M.C.R.C. meet.

But the B.A.R.C.

BY contrast at a car meeting the start is usually carried out as furtively as initiation into the Ku Klux Klan, many parasangs away from the paddock, or I cannot see the monster projectiles at close quarters. If I stay in the paddock, I shall not see much of the race. If I go to the hill, I must sprint down again and along the straight to see the finish. All these journeyings must be done on foot; and I should not be a motor cyclist if I liked walking. Finally, the races are usually so short that the fortunes of the racers depend principally on the handicapping; and if a man manages, either by running dark or by gingering up his tuning, to defeat the judgment of the handicappers, I am not half so thrilled by his victory as I am at a B.M.C.R.C. meet, where perhaps six men are using sister engines—275 c.c. J.A.P.'s, 500 c.c. Nortons, or 1,000 c.c. Yankees—and defeating their rivals from scratch on level terms. No. Give me the B.M.C.R.C. every time, petty as a motor cycle is by comparison with a 350 h.p. Sunbeam; but let the B.M.C.R.C. develop the showman's instinct during the winter, or engage somebody who has it. Any theatre, cinema, or football club which was run on B.M.C.R.C. lines would have the shutters up inside three months.

The Note of Hooters.

I REMARKED the other week that the average bulb hooter is not rowdy enough for blind corners, considering the amount of traffic one meets nowadays. This provoked the Dekla people to forward me a sample of their manufacture. Its arrival reminded me that I had long meant to congratulate them on having exorcised the twists which make the ordinary bulb horn so liable to rust and so tiresome to clean, for their "trumpet" is straight-sided and smooth. The note is very possibly "just

Occasional Comments.—

about as piercing as that of a bulb horn can be; but I am afraid it only strengthens my conviction that electric hooters or exhaust whistles are demanded by modern riding conditions. To quote two examples: Every time I start out from Hot Air Villa I have (a) to negotiate a walled V corner; and (b) to overtake motor 'buses. A lorry tried to pancake me at the aforesaid corner, and when I remonstrated, the driver remarked that he had sounded his horn, that I hadn't sounded mine, and that in no case would my blood have lain at his door. As it happened, I couldn't hear his horn, and I had given three full-blooded toots on mine. As for 'buses and coaches—well, I've tried my Dekla horns on them repeatedly, and they take no more notice of them from astern than a tipsy Aussie took of a Bolu major on Armistice night. The Dekla people make an excellent electric horn, so they will bear me no malice for my general contention that we live in a noisy epoch, and must make more noise ourselves if we wish to survive.

The Silence of Oil-cooling.

I HAVE now been privileged to drive one and sit behind the other of the only two oil-cooled engines in the world. (I exclude the ordinary air-cooled engine, yclept "oil-cooled" by the cynics, for it is only 50% oil-cooled, whereas the new Zenith bicycle and the new Belsize car have Bradshaw engines which are at least 80% "oil-cooled.") We all know that the ordinary "air-cooled" engine has a special metallic ring of its own. I do not in the least object to this noise where solo machines are concerned. But on all passenger mounts—whether sidecar, cycle car, or car—it spoils the tick-over, and, when such an engine is pulling hard, its tinny resonance is not relished by

many people with quite the same fervour as the purr or roar of a water-cooled engine. Now the new oil-cooling may turn out to have special defects of its own, if only of a sentimental character; at any rate, it is much too juvenile for me to enthuse precipitately about it, though I already like it passing well. But one thing can and should be said in its favour, even at this early date; it makes for a remarkably quiet engine. The cylinder barrel quite clearly acts as a sounding box on ordinary engines. When that sounding box is first of all largely submerged in an oil bath, and, secondly, secreted inside a capacious crank case, its resonance gets rather daunted. Neither of the Bradshaw oil-cooled engines possesses any tinny ring.

Boycotted.

AN officer in a Sikh regiment discourses interestingly of overseas trade. There are British machines in India, for which not one solitary spare part exists in that country; I do not know which to admire most, the impudence of the vendors, or the optimism of the purchasers. The complaints of our riders in the International Six Days about the effect of altitude on carburation leave him cold; in riding up to Kashmir for a shoot, he began by climbing 6,000ft. and presently dropped 5,000ft. He states quite justly that a carburetter which does not embody a lightning adjustment for such variations is of no use to him. Given a suitable machine and adequate service, he considers that British firms should take stringent measures to prevent profiteering on the part of their agents in India. I should have thought that the ordinary laws of supply and demand would have prevented overcharging for new machines in these days; but perhaps my gallant correspondent is thinking of repairs and spare parts.

AUTUMN IN WALES.

Many of the 1922 models which will be shown at Olympia will have passed through a period of intensive testing which approximates to a year's normal running. Recently, in Wales, we met a party on new Rex models returning from an expedition among the steepest hills in the Principality. On the road from the summit of Llanberis Pass to Capel Curig; in the distance Snowdon may be seen.

The SPIRIT of a SPORTING TRIAL.

IN our report of the Scott Trial last week, some mention was made of the cheerful spirit which pervades the whole gathering. At no other event have we experienced quite so much good-natured fun or quite such good sportsmanship, so that it seems worth while to try and convey to our readers some idea of the atmosphere.

The trial is unique in many ways, the organisation is excellent, and every provision is made for the comfort of competitors—except when in the saddle—and the route is the last word in villainy. No photographs can convey the nature of the difficulties which have to be faced, and no one who has not seen the course would believe that motor cycles would survive them. Any of some five or six sections would cause streams of protests in an ordinary trial, yet not a grumble is to be heard from the tired and often bruised competitors, who are proud to receive their certificates or joke about their mishaps. A premier award is a thing to dream of, and many would rather earn a certificate in this trial than a "gold" in an ordinary reliability event.

An Advantage.

Undoubtedly, those who do not know the course start under a considerable handicap, and performances such as those of the Scott team can only be accomplished by a combination of first-class men with a knowledge of Yorkshire and machines that will stand the racket. The Sunbeam win in the class for amateur teams was very popular, and Whalley's performance was little short of miraculous. Triumphs also showed up well in the hands of local riders.

"Incidents" are far too frequent for the mere journalist to handle, and, even though one of the coveted certificates occupies a place of honour in his office, it is impossible to be everywhere on a course of this description.

Over bog or steep,
through strait,
rough, dense,
or rare,
"Paradise
Lost"

One well-known Scott rider went to some trouble in arranging for a comfortable ride. Previous to the event, he spent some time in fitting a specially-sprung saddle, and the work was admirably done; nevertheless, within thirty miles of the start we observed him dashing at a series of gulleys—at the first, both rider and machine leapt high in the air, and there were ominous sounds, at the second there was a rending crash, and the special seat attachment parted company with its owner. In spite of this,

the rider finished the course.

Even after the short morning's run, many machines were shorn of footrests, carriers, mudguards, etc., and not a few riders bore honourable scars. It is no disgrace to fall off during a Scott Trial, and few, indeed, are the survivors who can boast that they stuck to their saddles throughout. Of the twenty-nine machines to complete the course, there were not ten which had emerged without visible damage. Why do we ride?

Why do we risk our necks and our machines? Why do we enjoy it? And what good does it do?—I do not know. All I do know is that if I do not again compete next year—and on my own machine, too—it will be because I am to be numbered amongst the halt, the maimed, or the blind.

Spectator's View Points.

It was for such a reason that I was a spectator this year—doctor's orders—and, in spite of the agonised expressions of the riders as they jolted over boulders or dragged their machines out of bogs, an insane (possibly) longing came over me to be amongst them again. Perhaps all motor cyclists are a little mad; at any rate, spectators at the Scott Trial may be excused for reaching this conclusion, yet they are good sportsmen, and they do enjoy a really sporting trial, and will travel far to attend it.

CARBO-MAG, LTD., Carbo Works, Carbo Street, CARBOTOWN.

One of the pages of "advertisements" in the official programme of the Scott Trial.

The Spirit of a Sporting Trial.—

Now as to the programme. This artistic piece of literature is compiled by a member of the Scott staff; it contains much good advice and many bad advertisements.

In addition, there is the following poem of undoubted merit, in which the firm's own production is mocked in no uncertain terms—after all, if a machine can stand this sort of publicity, it must have its points.

With Apologies to Mr. George Robey.

THE FACT IS.

I've just bought a wonderful motor, it has an engine, a tank, and a gear,
Now I have this new toy,
all the world is a joy,
I travel for miles without fear,

I ride it in day-time and night-time, all its uses I cannot describe,
It rings like a bell, and travels like —
It belongs to a wonderful tribe.

May I say it's a marvellous goer?

Well, perhaps, that is hardly correct
Marvellous true, and it sometimes does go,

Though I am rather afraid it's inclined to be slow;

Perhaps it does overheat on occasions,

It is even reputed to knock,

It's a wonderful 'bus—though it's taught me to cuss,

Well the fact is—SOME CROCK!

I used it last for a journey, to Brightou, to spend the week-end,

The weather was fine, so I started at nine, and sent off a wire to my friend.

The 'bus was in fine fettle, it started first kick of my feet,

AT THE HEAD
OF HEDDEN GHYLL.

Alex. Hill, a Triumph rider, illustrates "Spectator's" remarks that "the route was the last word in villainy." (The upper photograph depicts B. Dewhurst, another Triumph rider.)

So I mounted my steed—put her into low speed—

And waved to the kids in the street.

The journey was really successful,

Well, perhaps that is hardly the word,

At least it was pleasant, now that I can say,
Though I felt rather tired at the close of the day;

Well, when I say tired, I was weary!

I was almost too fagged out to talk,

I'd a terrible thirst! though my feet were the worst,

Well, the fact is—I HAD TO WALK.

Now this really wonderful auto is the joy of my life so to speak,

It gives to my boy, in a minute more joy,
than a car could give in a week;

It never goes right for an hour, it breaks down at the slightest excuse,

It fizzles and pops, and misses and stops,
And causes the vilest abuse.

It's a sort of a kind of a Triumph,

Well, Rudge is p'rhaps nearer the mark,

Yet it isn't a Rudge and it isn't a Bat,

Though all of these names make me take off my hat;

Now Douglas you guess, or Zenith or Nut,

You may even surmise it's a Dot,

It's a wonderful bike—a real Yorkshire Tyke,

Well, the fact is—IT'S A SCOTT.

The following instructions to competitors and spectators are amusing:

INSTRUCTIONS TO COMPETITORS.

Competitors must on no account assist one another by drinking all the water in the splashes.

Competitors found removing gates to make footboards will be disqualified.

Competitors may lift their machines over rough places,

but must bounce them on the ground every three paces.

Competitors must cross all splashes under their own power. The use of oars, floats, life-buoys, etc., is prohibited.

INSTRUCTIONS TO SPECTATORS.

Don't loiter in the middle of the splashes, as you may baulk other swimmers.

Don't stand in the road! Lie down; it makes a better surface for the competitors.

Valves, wheels, engines, cylinders, etc., may be found on the road. These will have been discarded by competitors to reduce weight. Spectators will greatly assist if they bring any such spare parts direct to Burnsall.

This is not a Race, it's a Tragedy.

This programme may be purchased for 6d. or more, and all receipts are handed to St. Dunstan's; various auctions are also held for this worthy object, and it is to be regretted that the patients are unable to enjoy a little of the innocent fun which takes place—it would surely do them a power of good.

Well, perhaps the Scott trial is too severe to be really popular with all sections of the public, but, nevertheless, it is a classic event.

SPECTATOR.

Through Feminine Goggles

Paris and the Salon

THE GRAND PALAIS

IMPRESSIONS OF A TRIP TO THE FRENCH CAPITAL FOR THE AUTOMOBILE SALON.

By Mab. Lockwood Tatham.

I AM going to start my impressions of the Paris Show with a confession. It was my first visit to the "gayest city in the world," so I must be forgiven if I claim a feminine privilege and digress sometimes from the main point—which is the motor cycle exhibits. But if you are a man, dear reader, please do not be alarmed, and rush to the usual masculine conclusion that I am going to discuss dress. It is an almost unbelievable statement, but literally I was not inside a shop!

It had been my original intention to make the journey by road, but not being quite sure how the French people regarded lonely lady motor cyclists (and I had also heard rumours of bad roads), I left my little Cedros in its garage and took a taxi to Victoria.

There was little of interest in the sea trip from Dover to Calais—that is, from the motor cyclist's point of view—but I judged that the ship was on full throttle most of the way across, for which we were duly thankful, for the sea was choppy.

In the Customs House at Calais I had my first opportunity to air my knowledge of French; then came the long journey to the capital, and my first experience with French taxis.

The specimen I eventually got into had a red Chinese lantern for a tail light, one cylinder, no springs, a pip-squeak horn, and a villainous-looking driver! His driving was hair-raising, and he had to stop every time he changed gear. It took me five minutes to realise he was not on the wrong side of the road. I do not think I like that right-hand rule. It might be all right when one is used to it. And oh! how dark the streets were!

I expected bright lights, gay music, and laughter. And I found gloom, silence, sad people, and gravity. I suppose it is *la guerre* combined with the prohibition of absinthe, but getting a smile out of a Parisian nowadays seems as difficult as getting a nail out of a back tyre.

Next morning I sallied forth, under a blazing sun and cloudless sky in my thinnest frock, to the Grand Palais, and after driving down the Champs Elysées I stood and gazed at the most wonderful building and exterior ornamentation I have ever seen. Surrounding the entrance were trees and grass slopes in summerlike verdancy—much greener than London—and the gilded-winged figures surmounting the columns on a

Our contributor arrives in Paris.

after London.
smiling faces

Hundreds of picturesque police form a guard of honour for the important personage opening the exhibition. Our correspondent sends a plea that the Life Guards would help the decorations of Hammersmith Road.

Through Feminine Goggles.—

An impression of M. Mahon, the President of the premier motor cycle organisation of France—the U.M.F.

nearby bridge glittered in the sunlight, while flags fluttered everywhere, and lines and lines of gendarmes (or are they just common and garden policemen?) lent dignity to an already imposing scene. Then inside—*hundreds* of cars!

Of course, being a motor cyclist before all things, I steered straight up to the section of the gallery set apart for those exhibits, and there I saw all that the heart of a human being could desire in the shape of a light vehicle

on two (or three) wheels and an engine.

I was very impressed with some of the lightweight solo machines, which struck me as being suitable for ladies, although designed for mere man. There was one lady's model, however, the

Soyer, a beautiful thing in several tones of blue, having a two-stroke engine, and a frame which embodied the tank. A very kind Frenchman informed me that the ladies of his fair country are not over keen on motor bicycles, and I guessed that one machine had been designed more to create a demand than to meet one.

Another stand which occupied my attention for some time was the Monet and Coyon exhibit. Never have I seen such a weird collection of objects with engines attached. I have sketched my impression of the cycle car, which, by the way, is brilliant yellow and black, and so small that it might be garaged under the dining room table. I think it must have been designed for madame and the baby; anyway the engine was only a kind of auto-wheel affair, so if madame were big the baby would have to be very young. There was also the double bicycle (no, not a tricycle, it had four wheels), which I would love to see being propelled down Bond Street. They also had bicycles

How some couples might look in the little Coyon cycle car.

with engines on the carrier, several sorts of motor bath chairs with one and two seats, bicycles, quadricycles, auto-wheels, etc. I rather expected to see a unicycle, otherwise every form of vehicle seemed to have been considered. Anyway, I

can imagine that the designer is one of a large family who has endeavoured to cater for all of relatives from grandma to the baby.

When I am very old and I still pine for the scent of petrol I may persuade one of my grandchildren to let me have a Monet Coyon catalogue before I finally decide on a bath chair. At present the Gnome-Rhône is more to my fancy. The colour scheme was so chic! Cream and blue tank with an aeroplane engine on wings transfer in red and black, shaped like a scarab! It also had other merits. The frame had beautiful sporting lines, and an engine that might have been designed by someone in the Blackburne works who owned a Triumph.

Seeing my interest, the owner promptly invited me to ride one last week in the race around Paris. Unfortunately my time is limited!

A really charming lightweight machine was called the Terrot. I liked the neat spare tank for petrol corresponding to the tool case on the carrier, also the spare inner tube holder. Even all those gadgets would not prevent using the carrier as a flapper bracket.

By the way, our French sisters certainly are not prepared for in that way. The Harley-Davidson was the only machine with a pillion seat fitted. It seems to be a case of sidecar or nothing over there.

If I were a sidecar enthusiast my next year's outfit would embody a French body on a British chassis. Some of the sidecar bodies in the Salon were really beautiful, but I do not like the way many of the

makers hoist them up in the air. They look so ungainly, and they cannot always be comfortable. The Viratelle, for example, slopes to the front, and the shape of the back compelled you to lean forward, while the cushion for your feet turns up your toes.

On the other hand, the Lutèce was a lovely model with a graceful, comfortable sidecar shaped like a boat. The machine itself had a self-starter.

There was also a wonderful Sedan chair of the Louis XIV. period, with lamps to

The pressed steel frame construction of the Janoir evidently startled our correspondent, who dreamed of it as above.

Here is a selection from the many charming mascots which caught the feminine eye: The Egyptian dancer symbolised grace, but the large bill of the bird suggests a heavy consumption, while our contributor asks us to imagine the lower contemplating figure after a tyre burst.

Some of the models have very sporting lines.

London and Paris fashions.

The difficulties of the char lady who was instructed to clean inside one of the little saloons.

Through Feminine Goggles.—

match. I can imagine Marie Antoinette's dainty face peering out of the tiny windows, and scrutinising with surprised eyes the little electric bulbs that furnish the light for the quaint lamps.

Luggage Accommodation.

Quite the other extreme was a striking looking torpedo two-seater, in which the beauties of to-day are asked to recline gracefully against the knees of whoever may be occupying the rear seat, for no back rest is fitted. Then there was another sidecar with enough luggage accommodation for a honeymoon tour—a beautifully finished body illustrated last week in company with the Sedan affair.

Some of the colour schemes were very effective and often uncommon, the Griffon, for instance, is finished in *café au lait*, chocolate, and pale gold.

Space being limited, I cannot mention here all the machines which impressed me—there were so many—but I must refer to one which I am sure must have been the result of a wonderful dream. This was the Janoir; it had a frame of pressed steel, and the engine was a flat twin, and, to the feminine eye, it appeared tremendously heavy. Of course, I am quite prepared for my brothers of the wheel to tell me that it has many advantages, and is a tribute to engineering skill, but, then, so is the Forth Bridge! Probably to the men on Mars the machines we love so much would appear as monstrosities, and perhaps

the Janoir would be, to them, what Venus de Milo is to the artist. I am only giving a woman's view. But frankly I returned with a feeling of disappointment.

French ladies would appear to take little or no practical interest in motor cycling. I searched for feminine enthusiasts in vain. A good Frenchman explained to me as delicately as possible that it was not considered quite *comme il faut*. But I am sure it is only a matter of time before Frenchwomen realise the joys of the open road on two wheels as well as on four, as we have done for quite a long time now.

National Characteristics that weren't!

One thing that struck me particularly in my rambles round the show was the difficulty in telling the difference between English and French people. Wishing to sharpen my pencil, I marched up to a fierce-looking individual with an Apache hat and pointed beard, and asked in my best French, "*Avez-vous un canif s'il vous plait?*" He replied, "Sure thing—let me sharpen it for you!" On the other hand, a thoroughly British-looking person in tweeds who used a Gillette every morning suddenly hurled volumes of French at me without any warning. I went away. I am very much afraid he wanted to sell me something.

The Paris Salon is undoubtedly an education in itself, and I hope that next year there will be more of my own sex to appreciate it both among our own English enthusiasts and our French sisters.

HOW MUCH PETROL ARE YOU WASTING?

Some Questions on Fuel Consumption Asked and Answered by a Motor Cyclist.

WHAT mileage do you obtain from a gallon of petrol?

The engine only requires a certain amount of petrol to enable it to carry out its work efficiently, but between the amount of petrol the engine actually uses and the amount you pour in the tank there is usually a wide discrepancy.

How are we to account for this difference?

Before going any further, it must be clearly understood that the engine must be in good order—a "dud" engine was never yet economical.

If you are a regular reader of *The Motor Cycle*, that is to say, an enthusiast, it is in all probability in first-class condition, but if you are a beginner, get a copy of "Motor Cycles and How to Manage Them"—I did when I started, and found it invaluable for many years. However, let it be assumed that your machine is in good order—compression, timing, jet size and petrol level O.K., and no undue friction in engine, transmission, or road wheels. Many people gear too high; it is a pity, as there is no real advantage to be gained—it wastes petrol, as has been proved by tests, does no particular good to the engine or transmission, and, in the case of "single lungers," is apt to add to the weight of the tyre bill.

Waste Not, Want Not.

Do you fill your tank from a two-gallon tin or measure it out by the gallon? There is a difference!

After an overhaul or a greasy road-side job you probably rinse your hands with petrol—an excellent idea, too, but do not accuse the engine of consuming that petrol.

Do you "dope" before starting up, or flood the carburetter rather liberally? The engine gets little value from that, you know.

Running your engine in "free" is not healthy for your m.p.g. figure; do it no more than is necessary.

Two Economy Tips.

During the war, when there was a pressing need for economy in petrol, many weird and wonderful "gadgets" were fitted to motor cycles by the credulous in search of those extra m.p.g., not to mention various "dopes" that we were exhorted to add to our precious fluid. Of the whole bunch, there were but two (in my humble opinion) of any real value:

1. An extension pipe of six to eight inches in length fitted to the air inlet of the carburetter.
2. An extra air valve in the induction pipe.

The former traps any blow-back, and also tends to give a "cleaner" insweep of gas, whilst the second has the effect of breaking up the mixture better.

Here is a little tip—not by any means new, but not too well known—that is well worth trying.

Give your engine a clean up—externally—particularly the induction pipe, carburetter, and petrol pipe. Now add a small quantity of engine oil to the petrol in the tank. After running a few miles you will in all probability find that your petrol pipe and carburetter bear distinct traces of oil. In the ordinary course of events, petrol is leaking at these points the whole time you are riding.

All the above are little points that are so easily overlooked, but they should all be watched if economy is desired.

P.S.

Cycle Cars Under Test

THE "L. S. D."
THREE-WHEELED
RUNABOUT.

SPECIFICATION.

ENGINE: 8 h.p. J.A.P., air-cooled.

TRANSMISSION: Shaft to gear box, hence by single chain to rear wheel.

WHEELS: Sankey artillery, detachable and interchangeable.

STEERING: Dired.

SPEEDS: Two forward and reverse.

TYRES: 700 x 80 mm.

LUBRICATION: Drip feed.

PETROL CONSUMPTION: 50 m.p.g.

EQUIPMENT: Large screen and hood, acetylene lighting, with large car type generator.

PRICE: £215.

MAKERS: Sykes and Sugden, Ltd., Linthwaite, Huddersfield.

THE two points upon which the three-wheeled runabout is usually criticised are its alleged propensity for rolling and the possibility of discomfort through having three-wheel tracks instead of the two of the sidecar or the car.

These two faults are suspected in all three-track vehicles, and have undoubtedly influenced many sidecarists to pass over the runabout when the sidecar no longer fulfils their requirements.

It is probably true that 90% of the experimental models of three-wheelers have rolled considerably when first introduced to the road, and the ultimate success or failure of the production model has been due to the manner in which the disconcerting tendency has been overcome.

Importance of Correct Springing.

In most cases rolling is caused by the fitting of car-type front axle and springs, the latter being designed from data obtained from experience with four-wheelers. No three-wheeler with car-type front springing giving the same amount of movement permitted in a car is immune from rolling. Therefore, it becomes necessary to damp out road shock with as little movement as possible, hence it becomes necessary to reconsider entirely the front springing question when it concerns a three-wheeler.

The three-tracks bogey owes its origin to bad

Front suspension and steering swivels.

roads. On smooth roads it matters little whether a car is supported on three or four wheels, and the same may be said if the pot-holes are so plentiful that it is impossible to steer clear of them. We will assume that a road is holed like a cullender: each wheel of a vehicle would then receive its shocks, and obviously the three-wheeler would suffer least because it had only three wheels. The whole question, therefore, is reduced to a matter of driving, and the fact that with only two tracks it is easier to "dodge" the pot-holes.

Massive Construction.

These theories have accrued from experience with several three-wheelers of ancient and modern design, and quite recently we were afforded an opportunity to test them again aboard an L.S.D. runabout, which, as most of our readers are aware, is the production of a North-country factory. Those who have examined the sturdy construction of the L.S.D. will better understand the reason for its strength when it is remembered that the roads in the neighbourhood of the West Yorkshire manufacturing towns are such that they would break up any vehicle with any weaknesses in its

Rear suspension and driving wheel of the L.S.D. Observe that the runabout is fitted with a stand à la motor cycle.

Road Test of "L.S.D."

construction. With its bad roads, miles of *pavé* and multitudinous hills, there could be no better locality to prove any design, and the L.S.D. has the appearance of having been "bred" where the going is hard.

We once came across an L.S.D. which had been in collision with a steam tractor, and a local wag expressed surprise that the little runabout had come off "second best." Although intended as a joke, it serves to illustrate the impression one obtains that the L.S.D. is capable of withstanding any amount of rough usage. The artillery wheels enhance this impression, and have had something to do with it being likened to a British bull dog. This is a good simile certainly, but one which its manufacturers could afford to render less effective by a little change in the design of the engine bonnet—an excellent piece of metal work, but somewhat unusual to the eye.

Since the L.S.D. was last seen at Olympia the bodywork has been vastly improved, which visitors to the forthcoming show will appreciate. Those who are

Controllability is one of the L.S.D.'s strong points. Only very occasionally was it found necessary to engage low gear, even after a stop.

thinking of purchasing a runabout should sample the seating accommodation. It will be found that there is more leg room than in the majority of light cars.

On the road we found that the comfort could be favourably compared with the best sprung sidecar—and perhaps a little more. The quality of the roads was from good to "mid-dling," and at speeds up to 30 m.p.h. the vehicle

did not roll, and the three-track bogey did not obtrude itself upon us.

As an example of steady running, it may be mentioned that on the runabout we were driving a small key hung on a piece of string from the dashboard and remained steady for miles on end—it neither danced nor swayed like a pendulum.

The L.S.D. has only two speeds, and, not knowing what freak hills we should attempt to ascend, the makers delivered the car with the lower of two sets of ratios, which are optional to the purchaser. The top gear was in the neighbourhood of $5\frac{1}{2}$ to 1, and bottom gear $9\frac{3}{4}$ to 1. On these gears we should say the L.S.D. would go anywhere. We tried it on Newnham Hill, near Daventry, and, although steeper than any road likely to be met with under ordinary conditions, the

Very few main roads are steeper than Newnham Hill, nr. Daventry, which, despite the rough surface, the L.S.D. climbed at a speed of approximately 18 m.p.h., with a reserve of power. (Right) The new models have a kick-starter with which it is a simple task to start the engine.

Cycle Cars under Test.—

runabout ascended it at a speed exceeding 18 m.p.h. For anywhere but the hilliest country the gears mentioned were too low, as the maximum speed permissible was about 35 m.p.h. Notwithstanding the air-cooled J.A.P. engine made no objections when called upon to maintain 30 m.p.h. for stretches of twenty miles, neither was vibration excessive. For anyone who does not require to exceed 35 m.p.h. often the ratios mentioned have their advantages. In traffic, for instance, we did not find it necessary to change down when forced to a crawl, the engine picking up on top gear in a manner not usually associated with sidecar outfits.

As regards controllability, anyone who has driven a motor cycle can manage an L.S.D. The levers for the Amac two-lever carburetter are on the large diameter Sturmey wheel, a drip feed lubricator is on the dash, there are pedals for the clutch and

powerful service brake, hand levers for the change speed, side brake and reverse.

We tested the brakes on the steepest portion of Newnham Hill, and found that with engine in neutral either of the brakes, which are both on the rear wheel, would pull up and hold the vehicle.

To swing over a 1,000 c.c. V twin is much more difficult than to perform the same feat with a four-cylinder engine, and the makers of the L.S.D. have now wisely fitted a pedal starter at the side of the vehicle, which not once during a trial failed to start the engine at the first "kick."

There is no doubt that the L.S.D. is well made and quite up to the work expected from a vehicle of its type, and we think that if a little closer attention were given to improving the general appearance these machines would be very popular next year, although, so far, the makers have had no difficulty in disposing of their output.

PASSENGER MACHINE TOPICS.

Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers. Collated by "Vedette."

PROBABLY the enthusiastic sidecarist changes his sparking plug more frequently than any other item on his machine. This much-maligned article is blamed for all kinds of sins of which it is entirely innocent, and many a sound plug is "scraped" without just cause. This, however, is by the way, for the Blumel Type S plug, which I have been testing for some months past, has given entire satisfaction in every respect. It has not shown any signs of leakage at the detachable gland, it has never sooted up, and has not caused pre-ignition, although it is fitted to a high-compression single-cylinder engine, and has been instrumental in the accomplishment of several long-distance journeys at high average speeds. A pair of these plugs has also given excellent service on a 7 h.p. A.J.S. sidecar. The plug is thoroughly well-made, and the special insulating material shows no signs of deterioration after several thousand miles of hard usage.

EVEN the owner of the sporting or semi-sporting solo machine usually desires to become a sidecarist at some period of his career. Hence the popularity of these ultra-light streamline sidecars, in which the younger generation love to loll. Quite one of the neatest and most "sporting" of this type that I have seen for some time has just been introduced by Watsonian Sidecars, Ltd., Conybere Street, Birmingham, who, of course, are the makers of the popular "R 34" attachment. The

illustrations show the simplicity of the triangular chassis and of the springing; the body, too, is light and simple, being constructed of polished aluminium on an American ash frame. With a 26 x 2½ in. tyre the complete attachment weighs only 60 lb., and, what is perhaps more important, costs only £17 10s. (including crate or fitting).

The 1922 Humber sidecar outfit. This well-known machine has earned the enviable reputation as one of the quietest motor cycles on the road. Next year the Grindlay sidecar will be fitted as standard.

I HAVE taken delivery of a little Verus-Blackburne sidecar outfit. It is a fascinating little machine fitted with a Canoelet sporting sidecar with scoop type

windscreen. My first impressions are that, despite its small capacity, this type of machine has great possibilities for the younger generation. There is plenty of speed; in fact, in this direction it reminds me of the average pre-war 3½ h.p. outfit. There are two little points I do not like. First, the aluminium toolbox in the top tube chattered in a most disconcerting way that I have removed it, much against my inclination; it is such a handsome fitment. Secondly, the little sidecar, when empty, also chatters,

where, I have not yet discovered, but I rather suspect the shackles. I hope to improve this by the use of spring washers.

A SPORTING ATTACHMENT.

Three views of the new "feather-weight" Watsonian sidecar which sells at £17 10s.

MUCH ink has been spilled on the subject of spring frames, and many are the designs which have been put forward, and yet few machines have incorporated this eminently desirable feature. In the meantime, I have been

Illustrating the elliptic springing of the 1922 Triumph sidecar.

experimenting with a Brooks B600 laminated spring saddle attached to a medium-powered sidecar outfit. The result is all that can be desired from the rider's point of view, though, of course, the rear part of the machine is not insulated from road

Showing how Brookss B600 saddle is attached to the carrier.

shocks. It will be remembered that the saddle is supported on four long cantilever springs attached to the carrier.

The arrangement is such that the full length of the spring comes into action and the saddle has a parallel motion of considerable magnitude. In addition, the springing is instantly adjustable to the rider's weight by means of a simple screw and nut device conveniently situated at the rear of the carrier. In actual practice, the increase in comfort over a normally well-sprung saddle attached to a rigid frame machine has to be experienced to be believed. In the present condition of many of our roads, anything which will increase the comfort of the rider is eminently to be desired, and, after riding the Brooks B600 for some 3,500 miles, we have nothing but the highest praise to offer. There is no noticeable side roll, and the shocks from the worst pot-holes are smoothed out into an easy floating motion, which enables long daily mileages to be accomplished without discomfort. Certainly as a spring frame substitute, the Brooks B600 will be hard to beat.

SO familiar is the purple sidecar fitted, exclusively, to Triumph machines for the last year or two that a somewhat drastic change in its design will come as a surprise to many who probably saw little

room for improvement. The spring wheel has been discarded entirely, as has the petrol tin carrier on the chassis—a method of carrying spare fuel which, it will be remembered, aroused considerable discussion in our correspondence columns a little while back. In consequence the chassis has been considerably simplified. The wheel is of the enclosed variety, supported at both sides on vertical lugs, which “under-sling” the whole sidecar four or five inches. Two half-elliptic springs are now used at the rear, and two compression coils in front.

Whilst following the same general lines as hitherto, the body is larger, and now has a bulbous back serving as a luggage space and housing for the spare tin of petrol, which is held securely in place by a spring on the underside of a hinged partition. It is unnecessary to comment on the detail design and finish, which are only what one expects on a Triumph production. This sidecar will make its appearance at Olympia, and will be fitted as standard thereafter.

THE reminder in last week's issue of *The Motor Cycle* that only half taxes are payable after October 1st came as a surprise to many people who ought to have known better. It has now been definitely announced that, in addition to the above concession, a tax of 10s. only is required from the man who buys a sidecar for an already registered machine during the last three months of the year.

This means that light-weights pay 15s. for three months; over 200 lb., 30s.; light-weights with sidecars, 25s.; and big sidecar outfits, 40s.

Threequarter view of the new Triumph sidecar. (Inset) The spacious bulbous back, showing the lid of the petrol tin compartment raised and the spring that holds the can in position.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

LIGHTWEIGHTS IN THE INDIAN JUNGLE.

Sir,—The correspondent who contributed your article entitled "Lightweights in the Indian Jungle" in the issue of August 25th, and his friends, are to be congratulated on their boldness in trying their luck on a Kacha road (in a neighbourhood at one time, I think, not unfamiliar to Sir Eric Geddes) during the rains.

They are less to be congratulated on their (?) sportsmanship in shooting feathered game during the close season.

Lakhimpur.

F.

SUNDAY COMPETITIONS.

Sir,—Mr. Miles, in his recent letter, says he "is a motor cycling enthusiast and ventures to call himself a sportsman." I do not dispute this statement, though we disagree on the above question, but why does Mr. Miles state that my letter "hardly savours of a truly sporting tone?" Surely not because he disagrees re Sunday trials, as everyone is entitled to his own opinion.

I most certainly contend that the half day on Saturday is not sufficient for club events (especially reliability trials). I hardly think Mr. Miles can reside in either Lancashire or Yorkshire when he says that "the whole of Saturday could be devoted if necessary." Sunday riding is a very popular feature, and I still fail to see any difference between joy-riding and reliability trials on Sundays. The average clubman is just as good a fellow as any other rider—perhaps better. Who knows? I am always prepared to do anything I can to help motor cycling as a clean, healthy sport on all days, and as long as I am convinced that Sunday trials are essential to club life, so long shall I support and work for them.

W. A. DOVENER,

Hon. Secretary Bradford M.C. and L.C. Club.

PUNCTURE-SEALING TUBES.

Sir,—Our attention has been drawn to a paragraph in your issue of 6th October, by "Ixion," in which a user of the Challenger puncture sealing tube states that, with a tube he had tested, the punctures only partially sealed, and that the tube had to be inflated at intervals until it could be removed for repair.

Such a case is very unusual, and we are inclined to think this user must have got hold of one of our earlier tubes, in which the puncture-sealing material was in a thinner layer than we are at present using. Even so, in ninety-nine cases out of a hundred the punctures sealed rapidly and satisfactorily. Certainly, such could not happen in the present make of tube, through which comparatively large objects repeatedly penetrate without any leakage whatever.

Only to-day we have received a cover for repair fitted with a Challenger puncture sealing tube which had been pierced right through cover and tube by a halfpenny. There was no deflation except for a second while the halfpenny was being withdrawn. The puncture sealed itself immediately and the tube requires no repair.

The writer's argument about an exceptionally long nail piercing right through the inner side of the tube really requires little answer. In such a case, the nail would not deflate the tube in the first instance as in an ordinary tube, and, therefore, would be easily heard and withdrawn before it had time to penetrate right through to the back. To protect the tube all round would cause quite unnecessary weight, considering the extreme rarity of such a possibility.

J. P. COCHRANE AND CO., LTD.

(COLIN R. CROMBIE, Director).

GRAPHITE FOR CHAIN LUBRICATION.

Sir,—We are in complete accord with the advice given by the writer of the article headed as above, Mr. G. J. Denbigh, M.Sc., namely, the recommendation that your readers should obtain their supplies from firms of repute who evidently employ scientific control in their factories.

Our Foliac motor graphite, which is used in our Foliac motor chain compound, contains no grit or sand. The carbon content is over 98%, and the difference is principally talc or soft mica, which is non-abrasive. Your contributor will be aware that talc and mica contain 63% and 46% respectively of silica, but that such silica is distinctly not sand.

We think this well-known distinction should be made very clear in your columns.

GRAPHITE PRODUCTS, LTD.

B. PHILIPS SMITH.

27.32 M.P.H.—A PRIVATE OWNER'S T.T. LAP RECORD

Sir,—In September, when in the Isle of Man, I took my machine, a lightweight fitted with a 2½ h.p. J.A.P. engine, round the T.T. course. Being a complete stranger to the course, riding an untuned machine, with full touring equipment, I consider that my average speed of 27.32 m.p.h. (per Bonniksen and watch) a creditable performance for so small a machine.

I feel sure that your readers would be interested to know how standard machines ridden by private owners have performed round the course.

Cambridge.

TYRES, EX-W.D., EXPERIENCES WITH.

Sir,—My experience is about the same as "Fair Deal's." One 28×3in. Wood-Milne I had from Allen Bennett, after doing 1,200 miles, looked as new, but another Wood-Milne, 26×2½in. for 2½in. rims, from another firm was worn bare to the canvas under 300 miles. Since this I have thought it advisable to leave W.D. alone. If dealers would only guarantee a reasonable mileage from these tyres, many more, like myself, would no doubt buy them.

A. DASHFIELD.

Sir,—My experience of these tyres is exactly the opposite of "Fair Deal's," as related in *The Motor Cycle* recently.

I ran a 26×2½in. tyre on the rear wheel of my 4 h.p. Douglas sidecar for 4,000 miles, and when I sold the machine it was still doing good work on the front (Dunlop extra heavy, 30s.).

I bought a Goodyear, 28×3in., for 50s. from the Hendee Co., and after 2,500 miles on the rear wheel of my Harley sidecar it looks good for a further 2,000.

A friend bought a 29×3in. for 55s., which has been running for a considerable time on the rear wheel of his Harley sidecar, and it is still going strong, and he is a driver who likes to drive at his outfit's best speed whenever possible, and he does not believe brakes are made for ornament.

SOUTHCUMB MAY.

Sir,—In answer to "Fair Deal," re above, I purchased two 28×3in. tubes. They were W.D., and appeared to be quite all right and packed in original boxes. After a run of fifteen miles the butt end blew out. I tried the second, and the butt and valve both blew out. I wrote to the people at the Marble Arch Motor Garage, Edgware Road, from whom I purchased them, and explained what had happened, and they immediately sent me another new tube.

Wimbledon, S.W.19.

HARLEY-D.

"GATHERING ADVERT. MATTER."

Sir,—I suppose you have amongst your readers many who, like myself, have ridden and taken a vast interest in motor cycles way back over the years, and who, though now, alas! perchance fat and forty, have a sneaking regard for a fast 'bus, and dislike the "hot and bothered" note of the two-stroke. We read week by week of terrific speeds in hill-climbs up and down the country made on one or two famous machines. In the words of our picturesque cinema cousins, may we have at some future date a "close up" photograph of the actual engines used.

I merely ask as one who last year and this has bought two different makes of machines, each of which is famous for speed, records, and cups. I do not mention medals, for indeed they must have such a stock of these that probably they have been long since melted down for exhaust pipes on their directors' Roll-Royces.

However, in both the bicycles mentioned, the road performance was disappointing. Very. The front fork springing as sold to the public is not used by them in competition. Transmission varied, and engine design was quite a different proposition from that used to gather advertisement matter.

I have now in use a model 16H Norton, which, as a solo machine, is a really fine job. I mention this solely because it is a pleasure to ride a bicycle which, though standard, is good enough to force other manufacturers to build special machines to keep their name in front of those who love a really fast and efficient motor cycle.

My notepaper will prove to you I am not in anyway connected with the trade.

GEO. F. COLE.

WHICH IS THE WORLD'S BEST SOLO MACHINE?

Sir,—I am somewhat surprised to see that no one has yet put forward the undoubted claims of the 3½ h.p. Norton for the world's solo title. Having owned two of these machines—one pre-war single-gear and the other post-war three-speed—I feel it my duty to claim fair consideration for this estimable mount. As regards reliability, I can only state that my present record is over 5,000 miles without a road stop, except for tyres. The speed and hill-climbing capabilities of the Norton are unquestionable, as a glance at any competition results will prove—and these results are obtained on standard machines—but, in addition, to these qualities, the smooth, slow running and the instant and rapid acceleration of this mount are surely hard to beat. The addition of 700×80 mm. tyres (which can be fitted to the standard 650×65 mm. rims) has made my machine the acme of comfort. Detail finish might possibly be improved; but I, for one, prefer results to "pretties," and have no reason to be ashamed of my favourite mount on any score.

H. WHITEHOUSE.

Sir,—I agree with Mr. Arnold that, provided the argument is conducted on a sound basis, it would be interesting, and to a certain extent instructive, to learn the opinion of other readers regarding this subject.

I have followed very closely the correspondence in *The Autocar* regarding the world's best car, but find the whole thing getting further from the point every week, through sheer lack of a substantial basis upon which to argue. It is useless to take price into consideration, for there is no comparison between the machine that is built up to a standard of perfection and the machine that is built down to a price. It is also a sheer waste of time and space for a correspondent to state that he considers his 2½ h.p. Tink-a-ponk to be the world's best machine because it does all that he requires of it, has given him long, economical, and exceedingly satisfactory service, and, when not in use, may be folded up and hung in the wardrobe, thereby saving garage fees. His little 'bus is wonderful, no doubt, but stand it by the side of a Sunbeam, and one will realise that a comparison is absurd.

I do not say that the Sunbeam is the world's best, because, being a resident in the South of Ireland, I am, unfortunately, out of the running, so to speak. Here I take off my hat to *The Motor Cycle*, for it is only through this inestimable paper that I am able to keep in touch with a truly sporting world. I am certain that the world's best machine can be looked for in England. Motor cycling is more prevalent in England than in any other country, and the English manufacturers are in the forefront of the motor cycle industry.

Of really first-class machines, on the manufacturing of which no expense has been too great, and in the designing

of which every detail has been studied to a marked degree by the finest brains of the motor cycling world, there are but few. Study the performance of these few, as to reliability, durability, accessibility, and other abilities that one expects to associate with a thoroughbred, and it confines the choice of the world's best motor cycle to an exclusive and very minute circle.

E. S. BADCOE.

Sir,—In reply to Mr. A. Arnold's letter, I am glad to see this discussion started, as I had meant to do so for some time. My ideal is the 'bus I own, a 1920 three-speed 4 h.p. Triumph, with A.C.E. discs, speedometer, etc.

London, N.12.

TRIUMPH.

Sir,—In my opinion the 16H Norton has that honour. While being a really fast machine, it is docile in traffic and as reliable as a Rolls-Royce. These machines are finished beautifully, and nothing is overlooked as regards small adjustments. As for noise, the exhaust is rather loud, but valve clatter is almost entirely absent, and the exhaust itself does not bother.

SATISFIED.

Fourmarks, Hants.

ONE OF THE NOVELTIES
OF THE
PARIS SALON.

The Peugeot motor-driven bicycle
wheel.

Sir,—As a purely solo machine, I think the Scott cannot be excelled. It is to be assumed, however, that by "purely solo machine" we infer that the question of sidecar usage will never be considered in relation to it.

The Scott was designed essentially for solo work, and its designer definitely abandoned the sidecar idea when he seriously tackled the three-wheeled passenger vehicle; hence, the Scott Sociable.

Having cleared the air, I base my opinion that the Scott is the best solo machine on the following points: (1.) It steers better than any other machine I have ridden; on rough or greasy surfaces it is stable to a remarkable degree. (2.) It is really comfortable; riding position, saddle springing, smoothness of propulsion, and fork springing approach the ideal. (3.) Controllability thoroughly good; controls distributed to both hands and feet, and all operated without change of riding position.

These qualities outweigh the little extra attentions which this machine occasionally demands.

Coventry.

TYKE.

SHAFT-DRIVEN CYCLE CARS.

Sir,—It has often occurred to me that there are apparently no shaft-driven cycle cars on the market. Why should this be so? The maxim of cycle car manufacturers is "Car comfort at motor cycle cost." That the shaft drive is practicable on one wheel is demonstrated by the F.N. in particular. Why, then, do not manufacturers approach one step nearer to cars by embodying this type of drive? I do not see that much extra cost would be entailed, as the F.N.—a motor cycle—has this drive, and is not abnormally dear. It is surprising to me that this query has not cropped up in your pages before.

SHAFT DRIVE II.

[At least two three-wheelers—T.B. and Scott—are shaft-driven.—Ed.]

DANGEROUS LICENSING DELAYS.

Sir,—Appended is a copy of a letter which I have just addressed to the London County Council in connection with the registration of a motor cycle and sidecar which I had bought at the beginning of June. The letter speaks for itself, and, to my mind, this long delay on the part of the London County Council in effecting the transfer of ownership on its books ought to be mentioned in the press in the interest and for the protection of the motoring fraternity. The latest Motor Licensing Act, as I understand it, is not merely framed to facilitate tax gathering, but also for the protection of motor owners against theft, etc., by giving them a proper "title deed." If I am right in my contention, the Act, as at present handled by the London County Council, defeats its own ends as far as the public protection is concerned. How is a theft to be traced if it takes four to five months to register the change of ownership?

F. W. STRAKOSCH.

[COPY.]

"With reference to my previous letter, dated September 3rd, which, so far, has remained unanswered, I hereby again wish to draw your attention to the fact that, although the registration book referring to the above number had been sent to your department as far back as June 3rd for the purpose of transferring the ownership out of the vendor's name into my own, it has not yet been returned to me. I should feel grateful if you could give the matter your earliest attention.

"I trust you will excuse my insistence, but I am prompted by a very unpleasant experience in connection with my previous machine. Fully six weeks after I had sold it, and when it was apparently still standing in my name, although the registration book had been sent immediately to your department on completion of sale, I was visited by a police inspector suspecting me of having either maliciously or accidentally set the heath near Keston on fire. It turned out that the police had been supplied by your department with my name and address as the owner of the No. XB—, which, of course, was wrong."

INTERNATIONAL RECOGNITION OF THE LIGHT-WEIGHT SIDECAR.

Sir,—I have read with much interest Mr. Jules Neher's reply to my letter of September 1st.

Apparently, the international body is no longer an international body, but purely one studying conditions of Switzerland. In this case, it merely resolves itself into a parish meeting, and I can only assume that its Continental members are so far behind the general trend of design that they have unwittingly fallen into an error in violently opposing the reintroduction of the 350 c.c. sidecar class.

From an economic point of view, we all want the highest efficiency for the least money paid; and, in fact, must have this to-day to carry on successfully.

Since my last letter was written events have happened in which lightweight sidecars have taken part which should clearly prove to Mr. Neher and his confrères that engines have so developed that a small cubic capacity engine would now comfortably take two average passengers practically anywhere. So far as frame construction is concerned, how are manufacturers to develop without they are given the opportunity of a try out in such trials as the F.I.C.M. are responsible for?

It is apparently unknown to these people that by scientific frame construction average loads of 2 cwt. are daily running about England for the quick and economical delivery of goods,

quite apart from the pleasure given to the man of moderate means who desires something more sociable than the solo motor cycle inside £100 cost.

The illustration on page 263 of your issue of September 1st just once more brings forward the old tag that the motor cycle and sidecar is the cheapest four-seater in the world, though I am not suggesting that it would be wise and desirable for every sidecar rider to load his back wheel as the gentleman portrayed has done.

Nevertheless, there is heaps of room for the cheap, economical, go anywhere, lightweight motor cycle and sidecar, and they certainly should not be excluded from the F.I.C.M. regulations unless that body want to lay themselves open to being partisan, or merely look ridiculous.

Mr. Jules Neher will remember that years ago he and I experimented with a lightweight small capacity M.A.G. engine, which astounded even me, and which is, I believe, giving good results.

Since then progress has been rapid, and I am quite sure there will be multitudes of lightweight sidecar outfits on the roads of the world before this time next year.

E. H. HUMPHRIES,

Managing Director Humphries and Dawes, Ltd.

WHAT IS A STANDARD MACHINE?

Sir,—Might I trespass upon your space in order to ask Mr. J. H. Wilkinson what exactly he means, in his letter of Sept. 29th, by a "guaranteed standard machine"?

For instance, does he consider the fitting of special handlebars, carburetter, exhausts, plugs, lighter mudguards, or an alteration in timing to be deviations from the standard?

If so, then I should say that very few standard machines have ever been entered for open speed events, and not many for reliability trials.

If, on the other hand, the above alterations do not constitute deviations from the standard, why should the fitting of special cylinders, pistons, gear boxes, or anything else be considered to do so?

The argument is, thus, rather a wash out, and, in my humble opinion, almost every machine ceases to be standard very shortly after it gets into the hands of an enthusiastic private owner.

London.

SUMMARY OF CORRESPONDENCE.

A liquid blacklead known as "Zebo" is recommended by Mr. H. Walton to those who like to blacklead their cylinders.

According to two local correspondents, long exhausts pipes are taboo in Devizes and in Blakedown, a village on the main Birmingham-Kidderminster road. At the latter place the fine is usually £3, and sometimes "to avoid monotony," £5.

Eton police, according to "J.C.W.," appear to be on the look out for motor cyclists whose rear number plates are obscured.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

CATERING FOR ALL TASTES.

Improvements in each of the James Models. Introduction of an Attractive Sports Machine.

Following the lines of the I.O.M. and Grand Prix machines, the new sporting James is pleasing to look at and to ride

WITH the conversion of the $3\frac{1}{2}$ h.p. twin into a true sports model, there will be a 1922 James to suit every type of motor cyclist. In this policy the James Co. is almost unique, for the machines are made throughout at one factory, and not merely assembled; like the products of most other firms with an ultra-wide range of models.

In point of interest, the new sporting machine must come first. The 64×77 mm. (496 c.c.) V twin engine does not differ in general design from last year's, but its efficiency is such that a guaranteed speed of 60 m.p.h. may be obtained without special tuning. Neat and symmetrical long exhaust pipes, taper valve springs, hexagon nuts on the induction pipe, and separate lubricating leads to each cylinder and to the crank case are the chief alterations.

It is in the frame, tank, and bicycle parts that the biggest change is noticeable. These have been "cleaned up" or re-designed on the lines of this year's Isle of Man and Grand Prix models, resulting in a considerable weight reduction (200 lb. for taxation), and a wonderfully natural and comfortable riding position—quite the best we have yet experienced. An exceptionally wide tank (which holds two and a quarter gallons) and careful consideration of handle-bar and footrest angles are chiefly responsible for this feeling of comfort.

Transmission is by chain, through a James three-speed box with clutch and kick-starter; light chain guards only are fitted; and a polished aluminium gate—die-cast, like the majority of the aluminium castings on all the models—im-

Gear box and power unit of the additional two-stroke model.

proves the appearance of the gear-chain mechanism. The gear ratios are 5, 6.9, and 10.25 to 1. Internal expanding brakes are fitted to both wheels, the front one following the lines of that fitted to the company's pedal cycles for many years.

At £105, this model represents a very attractive proposition to the sporting soloist. Quite in a different class, the $4\frac{1}{2}$ h.p. (86×103 mm. = 598 c.c.) single is primarily intended for economical side-carrying, and has also undergone much improvement for 1922. It is now an easy task to remove the cylinder, the design of which has been modified. Framework and cycle parts have, again, been cleaned up and lightened, and 28×3 in. tyres have been standardised. As on the sports model, a light guard only covers the rear chain—in this case, a Brampton spring link—and an aluminium gate is fitted. The rear brake is internal expanding. The sidecar chassis has been entirely re-designed, and the bodywork has been improved in minor details. With sidecar, the price is £135.

So successful has been the 7 h.p. sidecar outfit this year that only improvements in what may be termed convenience have been made. All three wheels are quickly detachable and interchangeable, and it is proposed to incorporate a speedometer drive which will remain *in situ* when the front wheel is removed. Oil-bath cast aluminium chain cases replace the light guards hitherto fitted, and the brake pedal is now offset to give easier operation.

Other Models.

All the well-known features of the 73×89.5 mm. (749 c.c.) engine, the staggered fins, the offset exhaust valves, and the valve and tappet covers are retained, as is the heel-operated clutch. Brampton type forks are fitted; but on the other James models only the vertical parallel motion is retained. The outfit, with screen, grid, etc., sells at £160.

The standard $2\frac{1}{2}$ h.p. (66×70 mm. = 259 c.c.) two-stroke has been least altered of all. It will be remembered that this model has a double chain drive to the countershaft, a dog clutch giving high and low gears. An additional model will now be marketed with a conventional two-speed gear box with clutch and kick-starter. Both the lightweight, which are respectively £60 and £65, now have internal expanding front brakes, and are fitted with the new lightweight M-L magneto, recently described in *The Motor Cycle*.

(Left) Aluminium chain cases and detachable and interchangeable wheels are the chief alterations to the 7 h.p. James outfit. Vee shaped Sterling leg-shields will also be substituted for the type shown.

(Right) The "Big Single"—a sturdy example of the economical sidecar machine.

THE SINGLE-CYLINDER SOLO MOUNT.

Extracts from a Paper read before the Institution of Automobile Engineers.

THAT the 1904 3 h.p. Triumph engine was almost exactly similar to many 1920 single-cylinder engines illustrates how little conventional design has changed during the past seventeen years. This point was mentioned by Mr. H. D. Teage, of *The Motor Cycle*, in a paper read last Tuesday before members of the Institution of Automobile Engineers at Birmingham.

The following are extracts from the paper:

The original engine (the 3 h.p. Triumph) had a ball bearing crankshaft of normal built-up construction, side-by-side mechanically-operated valves, and any individual part might be mistaken for that of a modern motor cycle engine. The 3 h.p. Triumph is given as an example of a seventeen-year old engine which was the forerunner of the present-day single-cylinder engine, and as showing that improvements have taken place in detail only. A second example of up-to-date engine design was the de Havilland, originally designed by Mr. G. de Havilland, and afterwards developed by Messrs. C. S. and E. A. Burney. One of these engines, built in 1903, is still in the possession of the author. The design embodied a solid crankshaft, a large outside flywheel, plain bearings, detachable head, and mechanically-operated valves, both actuated by a common cam. The engine did not reach the market till nearly ten years later, when the forerunners of the now popular Blackburne began to appear.

Such improvements as have taken place during recent years have been largely confined to efforts to discover the most suitable compression ratio by a process of elimination and to improvements in valve gear, and though these are steps in the right direction, with but few exceptions, they have not yet gone far enough.

However much good the sidecar has done for the motor cycle, and it undoubtedly showed up some weak spots, which were consequently corrected, it unfortunately did a certain amount of harm. The ideal solo machine can never be suitable for heavy sidecar work, and the ideal sidecar machine is bound to be too heavy and clumsy for the critical solo rider.

Weight.

It is obviously undesirable for any type of machine to carry about even a pound of unnecessary weight, and until a considerable improvement is made in weight-saving no present-day machine can be called really efficient. At first sight it would appear to be a difficult matter to cut weight to any considerable extent, and it must be admitted that to make an appreciable reduction in the weight of an existing model would be an arduous and costly proceeding, and that the result would not be worth the cost, though many pounds could still be saved by a careful survey of all parts. On the other hand, if the whole question of weight is carefully studied and a new machine laid out as a result of this study, it will be found that a very much lighter machine can be produced at approximately the same cost.

A pair of bevel gears is saved by the ingenious arrangement of cams on the H.F.G.

It is not only in the engine that weight can be saved. An engine-shaft clutch can be made much lighter than a counter-shaft clutch, since its speed is higher. Gear boxes are often used with no reference to the power which they are designed to transmit. Frame lugs are often quite unnecessarily heavy, and the strength of the frame would be increased by scientific cutting away of these lugs.

Valve Gear.

A bad design of overhead valve gear is no better, and probably considerably worse, than a good side-by-side valve arrangement, but taking into consideration fuel consumption, power, and a given standard of excellence in each case, the overhead valve engine will have a slight advantage in every case. First, if the valve gear is placed in the head, it is a comparatively easy matter to provide a well-shaped combustion chamber. Secondly, if the ports are equally well

Enclosed valve gear and push rods, and excellent cylinder design. The Hotchkiss.

designed the overhead valves may be smaller and lighter to provide the same efficiency. Thirdly, a carefully designed overhead-valve cylinder is a much simpler foundry proposition, and there is less likelihood of a large proportion of scrap; and, fourthly, it is easier to provide equal and adequate cooling to such parts as most need cooling.

The two greatest difficulties lie (1) in designing an overhead valve cylinder-head which provides reasonable cooling facilities and yet is a simple moulding proposition, and (2) in devising a simple and easily made operating mechanism for inclined overhead valves.

Taking these points in the order named, inverted valves to be of adequate proportions involve a considerable increase in the diameter of the cylinder head, since to provide sufficient cooling for the centre of the cylinder head they must be set fairly wide apart. Since also the normal valve gear necessitates the setting of the valves in line with the frame, it is not easy to arrange the cooling fins in such a way as to provide proper cooling without involving costly patterns and foundry work.

Longitudinal head fins will leave an uncooled pocket at the vital spot between the valves; while transverse fins, though easy enough to mould, are almost useless as regards cooling. We are left, then, with the alternative of circumferential ribs and with the difficulty of providing enough of these to give an adequate cooling surface. Probably the most satisfactory solution of the problem is to increase the head thickness towards the centre of the head to a very considerable degree, and to use the largest possible number of finely pitched ribs.

To prevent burning and distortion of exhaust valves the walls of the exhaust port should be carried up well clear of the cylinder walls, leaving a clear space for air to impinge on the casting at the junction of the port and the head.

Overhead Camshafts.

Inclined overhead valves, especially in conjunction with a long stroke engine, provide an ideal combustion chamber and gas flow; cylinder fins of the circumferential type are easily applied and the foundry work is simple; it is not, however, easy to devise a satisfactory valve gear. An obvious solution lies in the use of an overhead camshaft carried well clear of the casting for cooling purposes. Unfortunately, this involves considerable cost in bevels, or skew gears, thrust races and expansion joints, though it is possible to devise a simple two-step chain drive which shall not be unduly strained by cylinder expansion. A simple method of avoiding a multiplicity of gears is used by the H.F.G. light car.

If push rods are used, both rods and rockers should be kept as light as possible, and tension rods are preferable to compression rods if this can be arranged. The M.A.G. engine long ago demonstrated the fact that overhead valve gear may be suitably enclosed, and a very ingenious system of enclosed valve gear is in use on the Hotchkiss light

The Single-cylinder Solo Mount.—

car engine. This system provides a simple method of machining rocker-pivot bearings for inclined valve engines, while the total enclosure of the valve gear keeps the push rods warm and helps to minimise the increase in tappet clearance when the engine warms up. If push rods are employed it is of the utmost importance that separate return springs should be fitted for the operating gear, and that the valve springs should attend to the valves alone.

In defence of the side-by-side valve engine it must be stated that good efficiency can be obtained from this type if enough care is expended on the design of the valve ports, combustion head, and cooling areas, though after twenty years' experience the engines which have been so designed might be counted on the fingers of one hand.

Two-cycle Engines.

On account of simplicity and ease of manufacture alone, the three-port two-cycle engine has an immense field for development, and it has already gone a long way in assisting the production of the machine for the multitude.

It is curious that the would-be designer of a two-cycle engine is faced with an extraordinary absence of data on which to base his calculations, as such figures as are available refer almost entirely to low-speed engines such as are used in launches.

A mechanical transfer valve has many possibilities, since by delaying the closing of such a valve it would be possible to use a fixed carburettor and control on variable compression, the excess charge being returned to the crank case as in the case of the Pullin design.

The most fascinating problem, however, lies in the possibilities of direct injection.

Cooling.

With the data available there should be no difficulty about cooling either a two or four-cycle engine of any size likely to be used in motor cycle work. There are, however, many engines in which very considerable improvement can be made. Since cylinder cooling relies mainly on convection, it is essential, if the best results are to be obtained, that the ribs should be arranged so as to receive the maximum draught, and any shielding of one rib by another is undesirable. The cylinder head is the most important part as regards cooling, the barrel, except in the case of two-cycle engines, being comparatively unimportant. Care must be taken to ensure sufficient thickness of material to even up the temperature throughout so far as is possible, and most existing motor cycle cylinders err by being on the thin side.

It is useless to employ deep radiating fins if there is insufficient thickness at the root to carry away the heat from the cylinder, and the recent practice of using long ribs "as thin as the foundry can cast them" has its origin in a mistaken theory.

It is not necessary to use aluminium or alloy cylinders to obtain good cooling if sufficient metal is used and scientifically disposed. Nor is there any need for water-cooling on any single-cylinder motor cycle engine, and such a tendency would be a retrograde movement, especially from the solo rider's viewpoint.

The 3 h.p. Triumph engine, showing the similarity of this seventeen years old engine to modern production.

Lubrication.

The history of lubrication of motor cycles is of some interest, since many manufacturers have used a considerable amount of ingenuity in breaking away from standard car practice; whether or not this ingenuity has been wisely expended is a matter which is open to discussion. From the earliest days the simple hand pump has found favour with motor cyclists, and is still the most common form of lubrication to-day, though in many cases it is refined by sight feed and drip attachments. Curiously enough, when trouble was experienced with plain bearings in conjunction with this somewhat crude form of lubrication, motor cycle designers decided that, rather than improve the system, they would evade its faults by using ball bearings wherever possible. The practice has gradually expanded until the majority of modern engines are fitted with ball or roller main and big end bearings, while in one case rollers are used even in the small end.

SMALL CARS.

Motor cyclists interested in small cars should read "The Autocar," the parent journal of "The Motor Cycle."

Light, medium, and large cars are adequately covered in its pages. No artificial division of light cars from other types is attempted, or, indeed, is necessary, since the principles of design are identical and the interests of users, whether concerning questions of upkeep, taxation, roads, service or future development, are undivided and common to all.

Thus, "The Autocar"—the pioneer and the largest of all motor journals—forms the only complete record of the automobile movement, by embracing the interests of motorists in general.

Every Friday

Price 4d.

This scheme has worked satisfactorily, since it leaves only the piston and timing gear to the tender mercies of the novice, and once the engine has been thoroughly run in, it is wonderful how much evil treatment these parts will withstand.

The lubrication of two-cycle engines is a somewhat complex matter. The "petrol" system gives remarkably good results, and is a very simple method of proportioning oil supply to load; it has, however, the disadvantage of being messy.

Dry Sump Lubrication.

Excess oil in the crank case makes its presence felt in a much more objectionable manner than in the case of a four-cycle engine, and, consequently, a dry sump lubrication system appears desirable. This end may be achieved in two ways. The simplest is to utilise a release valve in the lowest part of the crank case to drain the sump, and the pressure thus generated may be utilised to circulate the supply. A system on these lines is embodied in the new Hawker two-cycle engine.

The same end may be obtained in a more positive manner by the use of a plunger pump arranged to draw oil from the lowest part of the crank case. If necessary, this pump could be timed to operate on every explosion stroke or every alternate stroke, involving a very slight increase in cost, which would probably be well repaid by the advantages gained.

Steering head design calls for much criticism, and yet very little improvement has been made. There is, it is true, a tendency to fit larger ball races, but few designers appear to realise the fact that there is heavy radial loading on the head races and that the normal races used in motor cycles are unsuitable for radial loads. Cup and cone bearings should be much more satisfactory, and it is probable that a plain bearing head with a good sized ball thrust at the base would give results as good as, or better than, the more usual system of two thrust races.

Unit Systems.

It is curious that the unit engine and gear box system has not become more popular in this country. The A.B.C., Clyno two-cycle, Beardmore Precision, and Woeler colonial models practically complete the list of existing British machines, though the Diamond, Singer, Veloce, and Villiers have all built machines of this type, and the Superb Four is a promising design. On the other hand, almost every modern Continental and American design embodies the gear box with the crank case (either cast integral or bolted on).

Spring frames have been a fruitful source of discussion, and much ingenuity and paper have been expended on the subject, but, as far as the solo mount is concerned, their inclusion in the specification should be justified by the fact that lighter parts can be used in frame manufacture, so that the total weight of the fully sprung machine is little or no greater than that of the unsprung type, and the former is equally rigid laterally.

Once shaft drive becomes popular, the unit system will automatically come into vogue, and in the meantime the designers of the machine for the multitude would do well to study the designs of the Clyno and the Gillet two-cycle machines.

Judges' Report on the Six Days Trials.

Extracts from the Official Report and Results issued by the Auto Cycle Union.

THE Auto Cycle Union has now issued its shilling booklet on the annual Six Days Trials held in August—a little late, it is true, but not so late as last year, when the report was issued about Show time. At the same time, there seems no reason why this report should not be made public while the trial is still fresh in the public mind.

The results differ only in minor details from those published in *The Motor Cycle* for September 8th and 15th. We append extracts.

"With so many machines of dissimilar character it is impossible to say that any particular motor cycle, or make of motor cycle, did best in the trial. For this reason, instead of a single team prize as in previous years, five team prizes had been offered by the Union, one in each of the classes thought particularly worthy of encouragement. In each of the following cases members of the winning team were all gold medallists: New Imperial, A.J.S. (winners in two classes), Rover, and P. and M. No team prize was offered in Class D (medium-weight solos) or in Class H (cycle cars), but in these two classes such meritorious performances were made by the three $3\frac{1}{2}$ h.p. Scotts and the Morgans that the judges have requested the Competition Committee of the Auto Cycle Union to award their manufacturers some special recognition.

"In general the following performances were of exceptional merit: P. and M., Scott, A.J.S., Matchless, O.K., F.N., New Imperial, Rover, Morgan, T.B., and G.N. All of the six cycle cars that started, viz., three Morgans, the T.B., and two G.N.'s succeeded in winning gold medals.

"Special mention must be made of the $2\frac{1}{2}$ h.p. O.K. Junior and sidecar driven by F. C. North. With an engine of only 292 c.c. capacity, this outfit climbed all hills and completed the trial. That such a light passenger machine can provide a sure means of rapid transport for two adult persons appears a fact of real importance to both user and manufacturer.

The Various Tests.

"THE ROAD TEST.—On the road the competing machines ran, as was expected, with clock-like regularity. The few marks lost for unpunctuality were usually due to tyre trouble or carelessness. The weather throughout the trial was favourable. An occasional shower of rain improved the road conditions, and the two most severe hills in the trial, Porlock and Lynton, were in excellent condition. Nevertheless, it is evident from the results that the modern motor cycle is more than capable of climbing any gradient likely to be encountered by the general user.

"THE SILENCE TEST.—The judges are glad to be able to report a great improvement as regards noiselessness. Many of the competing machines were fitted with special silencing arrangements, which did not appear to cause any loss in overall efficiency. Again and again favourable comments were heard from spectators

when a particularly noiseless machine passed them. The judges would venture to recommend the improvement of standard machines to a further extent, and the elimination of mechanical noises, which with certain makes of machine were very pronounced indeed.

"THE BRAKE TEST.—Most brakes were excellent. Front brake controls on several of the machines were not of sufficient strength. Faulty attachment of an otherwise efficient front brake led to disaster in the case of No. 1 ($2\frac{1}{2}$ Cedos) who was disqualified for obtaining and fitting a reinforcing plate. The brakes on the P. and M.'s, which provide for the outfit being held when unattended, are worthy of special notice.

"FUEL AND OIL CONSUMPTION TESTS.—The results obtained from the fuel and oil consumption tests, particularly when the loads are taken into account, are instructive. The Union would direct particular attention, not to any extraordinary individual performances, but to the following analysis of the results, based as they are on 730 miles of running over ordinary touring roads.

	Average Ton-miles per Gallon	Cost per 100 Miles
250 c.c. solo	17.49	2/2½
350 c.c. solo	18.72	2/2½
500 c.c. solo	18.05	2/8½
750 c.c. solo	16.40	3/1½
600 c.c. sidecars	20.79	3/0½
1,000 c.c. sidecars	20.49	3/1½
1,100 c.c. cycle cars	20.30	4/4½

"The judges realise that every advantage of downward slopes was taken by drivers to reduce fuel consumption. The use of the throttle as an air brake and of a variable jet controllable whilst driving were commendable features on certain machines.

"As regards oil consumption, many competitors confessed that before the trial they were ignorant of the quantity of oil really required. The actual amount of oil used up as a lubricant in an internal combustion engine is, of course, very small; a comparatively large surplus has to be fed to make good losses by leakage and burning, and to prevent the working oil becoming too dirty. Other things being equal, the consumption of oil by an engine largely depends on the accuracy of workmanship of its component parts. If too little surplus oil is fed, serious damage must ensue. If too much, the engine will become dirty inside and out, the exhaust system will be fouled, plugs will get 'oiled up,' whilst valve stems and tappets will become choked with oil and dust, etc., etc. Lacking any definite guide, the average motor cyclist over-lubricates, and in the light of the results disclosed by this test the Union itself appears to have erred on the generous side when the maximum consumption of oil was allotted.

"No engine trouble was reported as due to insufficient lubrication; on the other hand, certain engines, which throughout the road test were given an unusually small quantity of oil, performed exceptionally well in the speed test. No.

6 ($2\frac{1}{2}$ New Imperial) was the best in Class A, both for oil consumption and speed; the machine making highest speed in Class D, No. 30 ($3\frac{1}{2}$ Martinsyde), used 94.6% less oil than was allowed; No. 45 (7 F.N.) was the fastest machine on the track, and showed a saving of 124.6% of oil on the road, whilst similar results are noticeable amongst the fastest of the passenger machines, such as No. 90 (8 Morgan), No. 69 (8 Matchless), and the three P. and M.'s.

Final Test.

"The final test of the machines was divided into three parts: First, the high speed test on Brooklands, then the ascent of the test hill, and, finally, an external examination. The 730 miles on the road having been of the nature of an extended trial run, during which valuable information as to hill-climbing, brakes, noiselessness and running costs had been obtained, this 68 miles at high speed was almost certain to disclose any weakness not previously apparent. It was just possible, however, for a machine to have failed towards the end of the speed test, and yet to accomplish the distance at the required average speed. In 1920, at least one machine completed the requisite number of laps within the time limit with a broken piston at the finish.

"This year, to obviate such a possibility, every machine, after completing the speed test, had to be driven up the test hill, with its gradient of 1 in 4, to prove that not only engine but transmission also were in working condition.

"Eighty-four per cent. of the machines which started the trial reached the final test, and of these 92% completed the speed test. Over 60% of the latter passed the final examination without loss of marks.

"The final examination disclosed a noticeable improvement in reliability and simplicity of operation of gear boxes. Kick-starters were often over-hard to operate, and it was noticed that in several cases steering heads and fork links needed lubrication. There was a marked difference amongst the successful machines as regards cleanliness and neatness. Such machines as the P. and M., A.J.S., Matchless, O.K., and Dunell show that reasonable cleanliness is easily attained. Controls and particularly control cables, can be arranged so as not to interfere with cleaning, and the shielding of engine parts appears very desirable. Although a number of machines were dirty, the marked improvement observed on others shows that dirt and motor cycles are not inseparable.

"Under the heading of 'General Remarks,' the judges state that they are of opinion that over the relatively short distance covered no part of the power unit should have needed attention. They recommend that further attention should be given to general cleanliness and to the prevention of rattle in accessories and fittings. Transmissions should not have required frequent lubrication; this re-

CHAMPIONSHIPS

At Brooklands, 8th October, 1921.

Championship Scratch Race, Class A (275 c.c. solo)

***1st J. V. Prestwich—Diamond J.A.P. 2nd E. Remington—Blackburne**

* Breaking flying 5 mile record at 63.40 m.p.h. and 10 miles (standing start) record at 62.28 m.p.h.

Championship Scratch Race, Class B (275—350 c.c. Solo)

1st E. Remington—Blackburne.

Judges' Report on the Six Days Trials.—

mark would also apply to the links of sidecar springs.

"It is obviously important to design the suspension of a passenger-carrying machine so that overloading does not produce any damage.

"All unnecessary cables should be removed from the handle-bars, as the resulting simplicity would strongly appeal to the inexpert public. The provision of detachable wheels with dustproof bearings is not yet sufficiently general.

"It appears that modern transmission has progressed somewhat further than has the power unit. Much more attention should be given to the elimination of noise of every kind. The Morgan and T.B. machines were noticeably good under the heading of mechanical silence.

Demonstrating British Superiority.

"Although the percentage of premier awards is lower than those won in the 1920 trial, the judges consider that with the revised system of marking the 1921

Six Days Trials have demonstrated more fully and convincingly than has ever been done previously the general all-round excellence of the British motor cycle, whilst at the same time it has indicated where improvements would seem to be desirable."

The report is signed by the two judges, Dr. A. M. Low, A.C.G.I., M.I.A.E., etc., and Lt. Col. D. F. Nicholl, and the clerk of the course, Mr. T. W. Loughborough, A.M.I.A.E., secretary of the Auto Cycle Union.

SCRAMBLING ROUND SURREY.

Sporting One-day Trial of the Surbiton and District M.C.C. for the Sopwith Cup.

TRIAL organisers are in an unfortunate position nowadays, for, when efforts are made to provide sport in a category different from that to which we are accustomed, they are invariably the victims of high-pressure criticism. When sidecars and solo machines compete over the same course, it is extremely difficult to include tests sufficiently severe to impede the soloist without overburdening the three-wheelers to disadvantage.

The Surbiton and District M.C.C. trial on Saturday is a concrete example. In order to find a super-rider and machine from among the sixty entrants attracted by the generous prize of a 100 guineas cup (presented by Mr. T. O. M. Sopwith, C.B.E.), a course reminiscent of the shell-ridden areas of Flanders was selected.

The wide tarred road from Ripley, the starting point, to Guildford reassured the riders, optimists all, of their vision of a real joy ride, which, blessed with a crisp morning air and bright sunshine, seemed to be materialising.

Guildford High Street, with its unique hill, was descended, and, thereafter, surprises of the type that instinctively glue the hands to the bars and sink the knees into the tank greeted the competitors at every turn.

An Appetiser.

Deflected at the bottom of the High Street, the route rose steeply up a middle gear hill from the Guildford valley, and, as a primer for the riding which would be required later, a two mile grass track was traversed.

Breathing time was granted whilst admiring the beautiful country surrounding Farncombe, Godalming, and Haslemere; no doubt a cunning scheme to disarm the riders from the terrors to follow.

With curiosity aroused by a sudden but well-indicated left turn off the main road from Haslemere, the ruts, holes, and boulders which jumped before the eyes were not so great a surprise.

Solo men, if more fortunate than V. Gayford (8 Zenith), who slid into the rut, could plunge along the narrow ridge separating the gulleys; sidecar outfits, however, were doomed to axle scraping.

Had normal October weather been the rule, it would have been big odds against a single clean climb of Bexley Hill; as it was, a small patch at the bottom defied the back wheels of many of the sidecar machines. Higher up, things were worse. Here a gradient of about 1 in 7, studded with boulders as numerous as the adjectives employed by the unlucky riders,

weeded out many aspirants to the cup. F. C. Townshend's 8 h.p. Zenith was as unhappy as its pilot, whilst Secretary Reeves (also on a Zenith), probably anticipating the difficulties his high gear would involve, came up at speed and hopped from boulder to boulder. E. A. Leeding (3½ James) just saved a spill, whilst J. S. Bennett's 4 h.p. Metro-Tyler had no scruples and roared up at full throttle. A. H. Lowe (3½ Norton) had bad luck when his back wheel slipped into the rut at the side of the track and spoiled his clean sheet. An 8 to 1 low gear was too high for C. C. Labin's 3½ h.p. Indian. R. A. Green, a speed merchant on a 3½ h.p. Sunbeam, was lucky to escape a fall when his footrest struck a rock halfway up the hill. D. H. Davidson (4 Indian Scout) made an excellent climb, and R. Chaplin (3½ Sunbeam) also qualified, although he took the hill slowly. C. E. Taylor (2½ Vasco) did not turn up; that he and H. Sawtell (8 Morgan) had retired was reported later.

A circular route *via* Easebourne terminated at Haslemere, the lunch stop, but before reaching there Fernhurst accounted for many failures; stops were recorded against R. G. Spikins (A.B.C.), F. A. McNab (8 Trump-Jap), J. L. Boscall (A.B.C.), E. A. Leeding (3½ James), C. I. Freeman (A.B.C.), C. C. Labin (3½ Indian), A. S. Richardson (6 Trump-Jap), and R. Chaplin (3½ Sunbeam). It will be gathered that few riders with clean sheets entered the field in the afternoon.

The Afternoon's Run.

Ill-luck prevented Kaye Don (2½ A.J.S.) from starting. Apparently an improperly cleaned petrol tin was the cause of water in his jet. He got away later. A colonial section of sandy soil, boulders, and cart tracks was followed by a freak climb, known as High Button. There were many failures, due partly to the gradient, and partly to the soft nature of the road. W. H. D. Steer (8 Zenith sc.) stopped and had to push, and so had C. I. Freeman

1. Abbot (8 Zenith) and C. Finch (8 G.N.) taking the steep hill leading up to the main Milford-Haslemere road.

A picturesque scene on the route of the reliability trial held by the Surbiton and District M.C.C. for the Sopwith One Hundred Guinea Challenge Cup. A Matchless sidecar on the rough surface of Fernhurst Hill.

(8 Enfield sc.), K. H. Bywaters (8 Zenith sc.), C. A. Chaplin, and K. Preston (5 Zenith).

The last and most "freakish" climb of the day was situated in the woods which encircle Gomshall. A narrow track of appalling surface, gradually lessened in width as the climb proceeded, until,

terminating in a sharp rise to the knoll at the top, the width of the rideable track did not exceed 5ft. As a consequence, much sport resulted.

Leaf Hill, as it was christened, could not be climbed in the winter months, as the thick layer of leaves, soddened by the rain, would not permit a grip of any sort.

Fine weather again saved the situation. Kaye Don (2½ A.J.S.) came up first, well within his recovered time. His speed was good. R. G. Spikins (3 A.B.C.), however, simply leaped up.

R. C. Charlesworth made a great effort, and, with scientific bumping of the back wheel, just succeeded in bringing his big Zenith sidecar to the top.

Wheel spin was the cause of W. H. D. Steer's (8 Zenith sc.) failure. R. A. Green (3½ Sunbeam) again climbed at speed, as also did D. H. Davidson (4 Indian Scout).

F. A. McNab (6 Trump-Jap) hit a boulder, which tore the footrest and engine plate away; he subsequently retired.

The route was excellently indicated by red dye, whilst the general organisation was very good. Results:

THE SOPWITH 100 GUINEA CUP.—D. H. Davidson (4 Indian Scout).

GOLD MEDALS.—W. J. Kelly (3½ Norton), J. S. Bennett (4 Metro-Tyler), R. B. Clark (8 Matchless), L. Nicholson (2½ Coulson), A. H. Love (3½ Norton), G. E. Cuffie (2½ Metro-Tyler), R. G. Spikins (3 A.B.C.), Allan Gruzeller (8 Zenith), and V. Gayford (8 Zenith).

SILVER MEDALS.—F. C. Townshend (8 Zenith), lost 10 marks; R. C. Charlesworth (8 Zenith sc.), 0; R. C. Stanton (4 Triumph), 4; R. A. Green (3½ Sunbeam), 12; E. A. Leeding (3½ James), 15; E. R. Jacobs (2½ Wooler), 18; Kaye Don (2½ A.J.S.), 10; A. G. Wall (2½ Cedros), 4; J. Abbott (8 Zenith), 5; Clifford Finch (8 G.N.), 12; Stanley Watson (8 G.N.), 10; E. L. Snowell (6 Martin), 10; O. Clark (8 G.N.), 6.

BRONZE MEDAL.—W. H. D. Steer (8 Zenith sc.), lost 20 marks.

TEAM PRIZE.—R. C. Charlesworth (8 Zenith), V. Gayford (8 Zenith), and F. C. Townshend (8 Zenith).

SPEED TRIALS ON THE BOIS DE BOULOGNE.

World's Flying Kilometre Record in 250 c.c. Class broken by British-engined Machine and British Rider.

FOR the first time in history the Bois de Boulogne, in Paris, was the scene last Thursday morning of motor cycle speed tests. Thanks to the energetic Motocycle Club de France, the municipal authorities consented to allow the famous Allée des Acacias, which, during the season and at certain hours of the day, is the most elegant rendezvous in the world, to be given up for three or four hours to attempts on motor cycle world's records. In addition to this, the authorities placed at the disposal of the organisers a force of more than 2,000 soldiers, police, and municipal guards, who were used for controlling traffic and keeping spectators off the course. The event is really unique, and constitutes a most important victory for motor cyclists, for although there is no legal speed limit in France, the Bois de Boulogne is most jealously guarded, and at normal times fast driving is almost as rigorously suppressed as in Hyde Park.

An Ideal Speedway.

The Allée des Acacias is a broad, perfectly straight highway, passing through the heart of the Bois, from Porte Maillot to Longchamps. The surface is tar macadam, and was in excellent condition on the morning of the trials. The only complaint of riders was that they had not had any preliminary practice; they felt that had they known in advance the surface was so good they could have made even better time.

The English rider, J. V. Prestwich, broke the world's record in the 250 c.c. class by averaging 68.59 m.p.h. for the flying kilometre. In accordance with the

international regulations, the average was calculated on the out-and-home runs. The machine was built by Bartlett, a well-known English motor cyclist, who has been resident in France for several years, and was equipped with a J.A.P. engine.

Times in the 250 c.c. class were as follows:

J. V. Prestwich (2½ J.A.P.)	... 32½s.
Jolly (2½ Armor)	... 35½s.
Vernisse (2½ Yvels)	... 36½s.
Moussard (2½ Mousse)	... 46½s.
Rasser (2½ Rasser)	... 46½s.

There was only one competitor in the 350 c.c. class, namely, Meunier (on an Alcyon), who covered the kilometre in 31½s.

No records were broken in the 500 c.c. class, although Péan (on a twin Peugeot) came very near lowering the figure held by Judd on a Norton. The French rider made very fast time on the outward run; but on the return his engine seized, and he cut the tape with the momentum he had acquired, his time for the kilometre being 26½s., compared with the record of 25s.. The others in this class were:

Marc (3½ Alcyon)	... 29½s.
Bartlett (3 A.B.C.)	... 29½s.
Millard (3½ Motosacoche)	... 29½s.
G. Jolly (3½ Alcyon)	... 32½s.

In the 750 c.c. solo class Gillard (on a Peugeot) was timed in 26½s., and Liaudois (on a machine of his own make) in 34s. Pelissier (on a Motosacoche) was fastest in the 1,000 class (time, 25s.), followed by Coquide (on an Indian) in 29½s.

Bartlett (riding an A.B.C. in the 600 c.c. sidecar class) made the best time of the day by covering the flying kilometre in 34½s. Coquide (on an Indian) was first in the 1,000 c.c. class with 36s., fol-

lowed by Psalty (on a Harley-Davidson) in 43½s.

Cycle cars were run both as solo mounts and with passenger. In the former class Darmont established a record, with his Morgan in 28½s., the second in this class being Mauve (on an Elfe), time 34½s. In the cycle car class with passenger, the results were as follows:

1. Lombard (Salmson)	... 29½s.
2. Darmont (Morgan)	... 30s.
3. Chabreiron (E.H.P.)	... 31½s.
4. Lams (Mathis)	... 34s.
5. Mauve (Elfe)	... 50½s.

The winning machine in this class is the new four-cylinder cycle car with which Lombard won the Grand Prix race at Le Mans a few weeks ago.

BRITISH SUCCESS IN ITALIAN GRAND PRIX.

British machines scored a sweeping success in the 350 c.c. class of the Italian Grand Prix race, pictures of which appear on another page of this issue. Detailed results, including distances, times, and winners' speeds are appended:

350 c.c. CLASS.—1. A. Garanzini (2½ Verus), 2h. 51m. 30s.; 2. F. B. Badino (2½ Douglas), 2h. 52m. 38s.; 3. F. Ramuri (2½ A.J.S.), 3h. 4m. 11s. Distance, 224.9 km. Winner's speed, 56 m.p.h.

500 c.c. CLASS.—1. M. Accerboni (3½ Frera), 3h. 40m. 8s.; 2. G. Gleri (3½ Frera), 3h. 47m. 31s.; 3. B. Oppessi (3½ Triumph), 3h. 51m. Distance 311.4 km. Winner's speed, 52.5 m.p.h.

750 c.c. CLASS.—1. M. Castagno (4 Indian), 3h. 30m. 25s.; 2. R. Rava (4 Indian), 3h. 54m. 54s. Distance, 311.4 km. Winner's speed, 55.2 m.p.h.

1,000 c.c. CLASS.—1. D. Malvisi (7-9 Harley-Davidson), 2h. 54m. 9s.; 2. V. Faraglia (7-9 Harley-Davidson), 2h. 57m. 45s.; 3. A. Ruggeri (7-9 Indian), 2h. 58m. 50s. Distance, 311.4 km. Winner's speed, 66.7 m.p.h.

Times to Light Lamps.

Egyptian Imports of Motor Cycles.

In July, 1920, sixty-eight motor cycles were received into the country, but the corresponding month this year only six. Four of these were from the United Kingdom and two from France.

Road Conference.

Twenty-one countries were represented at the International Road Conference at Paris last week. The conference is due to the initiative of the French Government, which is anxious that steps should be taken towards modifying road regulations throughout the world.

New M.C.C. Trials Secretary.

To enable the Motor Cycling Club to carry out its successful competitions in the most efficient manner possible, the committee has appointed Mr. F. T. Bidlake, the well-known timekeeper, to be the permanent trials hon. sec. for the club. Mr. Bidlake's first great work will be to organise the London-Exeter run; particulars will shortly be published.

Special Features.

THE SPIRIT OF A SPORTING TRIAL
THROUGH FEMININE GOGGLES.
THE SINGLE CYLINDER SOLO MOUNT.

Helvellyn climbed by Lightweight.

An O.K.-Union rider, W. S. Chapman of Butterknowle, claims to have reached the summit of Helvellyn (3,118ft.). He used a gear of 18 to 1. He ascended from Patterdale, via Grisedale Tarn, and descended to Wythburn. Those who know this locality will appreciate that it is a remarkable achievement.

The Grand Prix Races.

Some confusion may exist in the minds of our readers owing to the number of motor cycle races on the Continent bearing the title Grand Prix. The most important of these was the Grand Prix of the Union Motocycliste de France, an event bearing the importance in France that the T.T. races hold in England. There was also the Grand Prix de France, organised by the Motocycle Club de France—a live and energetic club—but naturally this race did not occupy the same exalted position as that to which we first referred. Finally, there was the Grand Prix organised by the Belgian Motor Cycle Federation, which occupies in Belgium the same position as the T.T. does in England. So as to clear up the matter finally, we give herewith the results of these three races, together with reference to the issues of *The Motor Cycle* in which they were reported:

GRAND PRIX DE FRANCE, M.C.F. (CIRCUIT DE PROVINS).

(July 7th, p. 14.)

		h.	m.	s.
250 c.c. Class (149 miles).—Sandford (2½ M.S.)	4	47	27

•Kaye Don starting his record-breaking ride at Brooklands last week. On a 2½ h.p. Massey Arran, he broke the ten miles record (standing start), covering the distance in 8 min. 26.48 secs.=70.22 m.p.h. The engine is an o.h.v. Blackburne.

B.M.C.R.C. Annual Dinner.

Monday, November 28th, is the date selected for the annual dinner of the British Motor Cycle Racing Club.

Level Crossings.

Every level crossing should be guarded by gates; recently a Leicester motor cyclist was killed through this omission. This is a matter our motoring organisations might take up.

Season Tickets for the Show.

Season admission tickets for the Motor Cycle Show at Olympia (November 28th to December 3rd inclusive) are now available, price 7s. 6d. each, on application to the British Cycle and Motor Cycle Manufacturers and Traders Union, Ltd., "The Towers," Warwick Road, Coventry.

Kickham Convalescent.

We are glad to know that E. Kickham, who was so severely injured in the Grand Prix Race, is back in England. His leg is still in plaster and his arm out of action, but there is every prospect of a complete cure. We congratulate him on his recovery, which the doctors say is due to his cheery optimism.

Roads Improvement.

The annual general meeting of the Roads Improvement Association will be held at the Chamber of Commerce, New Street, Birmingham, on Thursday, October 27th, at 7 p.m. The chair will be taken by the Earl of Denbigh.

Red Lamps on Motor Cycles.

Some doubt still exists in the minds of motor cyclists—and in the minds of the police!—as to whether or not motor bicycles need carry a rear red lamp at the present time; but we are assured by the Legal Department of the Auto Cycle Union that riders of solo machines are exempt. On the other hand, it is urged that, for the safety of the motor cyclist himself, without considering the convenience of the other road users, a lighted rear lamp should be carried after dark. The sight of a red lamp ahead is a considerable comfort to the overtaking motorist, no matter what type of vehicle he is driving, and is in itself a valuable protection to the user. There is no doubt at all that sidecars must carry a rear lamp, but they have the option of lighting either the front or back number. This Order dates from 1913, but there is no order compelling the use of a rear lamp on a solo mount.

Closing Brooklands Meeting.

The final race meeting of the B.M.C.R.C. for the 1921 season will be held on Saturday, November 5th, and there will be three-lap handicap races for machines up to 500 c.c., from 500 c.c. to 1,000 c.c., and for passenger machines. Following these, there will be a winners' handicap for the first four finishers in each race. A five-lap championship race for machines between 500 c.c. and 750 c.c. will also be run. This should be a most entertaining meeting; and the handicap events will no doubt result in some close finishes.

THE SOPWITH CUP TRIAL. (See "Scrambling round Surrey.") Competitors on High Button Hill: L. Nicholson (21 Coulson - B), and A. G. Wall, whose mount is a 2½ h.p. Ccdos.

A Tang in the Air.

The time for leather helmets, thick gloves, and warm clothing is making evident its approach.

Lectures on Carburation.

Club secretaries who are arranging winter evening items in their programmes are advised to communicate with C. Binks (1920), Ltd., Eccles, Manchester, as this well-known firm of carburettor specialists has arranged a lecture on carburation, illustrated with lantern slides.

Utility Sidecars.

Several tradesmen's sidecars are exhibited at the Commercial Vehicle Show at Olympia, together with numerous light vans which would undoubtedly interest those of our readers who are tradesmen alive to the advantages of the ability promptly to deliver customers' orders. The current issue of *Motor Transport* contains a description of these exhibits.

British Machines in Holland.

Apropos the recent Anglo-Dutch trial, it is interesting to receive particulars showing the imports into Holland of motor cycles during July, 1921. These were as follows: German motor cycles numbered 107, Belgium 27, Great Britain 85, and United States 100. The totals for the first six months of this year were from Germany 568, Belgium 352, Great Britain 1,209, and United States 1,735.

A Commonsense View.

Some remarks on motor cycle trials recently expressed by the Northampton Borough Coroner, Mr. A. J. Darnell, are in refreshing contrast to the views put forward by various rural authorities who attempt to prohibit trials in their districts. The occasion was an inquest on a boy who was killed through a rider in a hill-climbing competition crashing into the spectators at speed. In summing up, the Coroner said that no blame could be attached to the rider, but he considered that where tests were held on narrow roads they should be attended only by club officials and the police. He was not saying that these trials were not necessary or desirable. It was just as well to hold these tests to show that England could produce a motor cycle as good as any other nation. We may add that Mr. Darnell is neither a motor cyclist nor a car owner, and his comments are, therefore, all the more valuable, but we fear that if the public were excluded the value of such tests would be lost.

A 2,500 MILE TRIAL IN FRANCE.

NEXT spring there will be held in France a motor cycle reliability competition of a more pretentious nature than ever previously attempted in that country, for the competitors will be called upon to make a complete tour around France, starting from Paris, following the coast line to the Pyrenees, skirting the Spanish frontier, following the Italian, Swiss, and Belgian frontiers almost as far as the North Sea, and then dropping down to Paris after having covered nearly 2,500 miles.

There is something in the idea of a *tour de France* which appeals to the

Frenchman, for long before railways appeared it was the habit of young artisans to make a tour afoot around their country before settling down. Of later years the cyclist Tour de France race has become almost a national institution. From time to time there have been reliability tours around France for motor cars, but no such competition has ever been held for motor cycles. Starting from Paris on April 14th, the daily stages will end at Caen, Nantes, Bordeaux, Toulouse, Avignon, Nice, Grenoble, Besançon, Strasbourg, Rheims, Lille, and Paris, the average distance to be covered each day

being in the neighbourhood of 200 miles. Regularity will be the basis of the competition, with penalizations for late arrival at the various controls. The organisation is in the hands of the *Motocycle Club de France*, which has just submitted the date and the rules to the approval of the governing body, the *Union Motocycliste de France*. Entry fees have been fixed at 1,000 frs. for one machine, 1,800 frs. for two, and 2,500 frs. for three, these amounts including insurance against fire risks and third party accidents. The event is international in character, and it is hoped that British riders will compete.

HAIRPINS—RIGHT AND LEFT.

Driving Ability, Ease of Steering, Hill-climbing, and Reliability Tested in the M.C. and A.C. Midland Centre Trial.

ALTHOUGH "this wonderful weather" did its literal best, it did not quite succeed in making last Saturday's M.C. and A.C. trial as easy as were many of the, so called, most difficult events of the year. Imagination fails to portray what would have happened had Saturday been wet, for, although 141 of the 141½ miles route were bone dry and 95% of the sixty-five starters finished, not 45% retained absolutely clean sheets.

The lightweights, for the most part with freak low gear ratios, and the Morgans and G.N.'s particularly distinguished themselves in what was a severe test, both of machines and driving ability; but, to penalise those with ultra-low gears, "a low gear acceleration test" was held on Saintbury, consequently the first point of interest on the route.

Varying Speeds on Low Gear.

B. Kershaw (2½ New Imperial) was extraordinarily fast, and as he performed very well later, he should be well in the running for one or two of the trophies. Others to show up well here were W. B. Gibb (3½ Douglas) and G. F. Povey (2½ Velocette). W. A. Bown (2½ Bown-Villiers) and E. Neal (2½ Metro-Tyler) were surprisingly slow, but P. Aherne's Ner-a-car had quite a creditable turn of speed, for which he was to pay for later—a 9 to 1 bottom gear does not make a 2½ h.p. lightweight a go-anywhere machine!

Apart from a surprise observed hairpin at Sheepscombe, it was fair going now to Stancombe Hill, although E. Arthur (3½ Scott) somehow succeeded in breaking his

Special commendation is due to R. G. G. Beesley's plucky lady passenger, who never hesitated in leaving the 3½ Sunbeam sidecar when necessary. They are shown bouncing over the gully at the top of Bussage.

frame in the neighbourhood of Andoversford. Wet leaves made the lower portion of the hill unexpectedly difficult, but the hairpin higher up was in good condition; and, excepting the Ner-a-car, all the soloists got up with varying degrees of confidence. Wheel slip troubled the sidecarists in general, and Reg. Brown (3½ Sunbeam in particular) so much so that he decided to retire there and then.

Next came a precipitous winding descent through a wood ("Caution" in block

letters on the route card, but almost unnecessary in the absence of recent rain), and then Bismore—rocky, steep, but dry. F. Adam (3½ Norton) was one of the few failures, the result of a hair-raising dry skid.

Exactly a mile further on, Bussage was easily the most difficult hill of the morning's run. Approached suddenly by a left-hand turn the 1 in 4 bottom portion looked dry, but certainly was not; and W. F. Smith (2½ Hobart) and A. Linforth (2½ Arnis) were early deceived, and failed. Bert Kershaw (2½ New Imperial), J. Doherty (2½ Levis), J. Lidstone (2½ James), and J. Johnson (2½ Sun) made outstanding climbs among the lightweights. Of the heavier solo machines, R. W. Duke's Triumph and W. B. Gibb's 3½ h.p. Douglas were probably best. L. Paynter (3½ Norton) skidded and fell; but T. F. Blumfield (6 Ariel) made a clean and fast ascent despite a tendency to wobble. Both T. H. Richards (4 Triumph) and H. Prosser (3½ Ariel) held their legs out ready for skids which did not come, but a like precaution was not in vain in the case of J. H. Walker (6 B.S.A.).

Wheel-slip on Bussage.

On the whole, the sidecars made a poor showing. F. A. Watson (3½ Sunbeam sc.) and N. Hall (2½ O.K. sc.) both hung on to the railings at the side to prevent their outfits running back; while H. G. Uzzle's 8 h.p. New Imperial sidecar came up like a crab, but it had no claws, and stopped. Helped by his passenger on the carrier, T. R. Gibbons (8 Acme sc.) made a clean ascent of the most difficult portion, only to break a belt higher up. While he was getting out of the way, the drivers of the three Morgans improved the shining hour by fitting Parsons chains, and their subsequent ascents were in consequence very fine. So were the three G.N.'s, and particularly Eastwood's, which disdained the aid of "Mr. Parsons." L. Newey (6-7 Ariel sc.) found that his

One of the few sidecarists to make a clean ascent of Bussage was L. Newey (6 Ariel sidecar). The reason is on the carrier and weighs 18 stone!

Hairpins—Right and Left.—

eighteen-stone passenger on the carrier was a sure preventive of wheel slip; but T. F. Watson's (4 Norton sc.) young lady passenger would probably have been too light had she left the sidecar. The latter driver appeared much surprised at his failure.

Quite the finest sidecar climb was made by F. H. Brown (4 Rex sc.); but R. G. G. Beesley (3½ Sunbeam sc.), assisted by his plucky lady passenger, was also quite good. All the other sidecars had to be assisted.

Knapp Hill concluded the morning's difficulties. Perhaps the best performance on the hairpin here was made by N. Hall (2½ O.K. sc.), but J. Wraight on a similar mount did not do so well.

Hills came thick and fast after the lunch stop at Stroud; but the first of these, Bownham, certainly did not merit the dozen or so observers placed there. Kershaw—and, indeed, all the earlier lightweights—made light of the gradient; and J. Lidstone (2¼ James) was very unlucky to come off in a rut. Aherne, as usual, pushed the Ner-a-car up. Smith (2¼ Hobart) and both the O.K. sidecars failed; but Smith (on the 2¼ Morris sc.) made a wonderful ascent. J. L. Shaw's Morgan (without Parsons) failed; and Eastwood (G.N.), who had broken a magneto chain after Bussage, had apparently re-timed his engine in a hurry.

Giddynap, from a New Angle.

Most of the competitors knew Giddynap, but even the most pessimistic had no idea that it was to be taken with a sharp right-hand bend on to the steepest stretch, which is quite 1 in 3. It was a test of driving ability, more amusing to the spectators than to the drivers. The low-gear lightweights were again good; but Povey (2¼ Velocette), Linforth (2¼ Armis), and G. Mason (2½ Connaught), all footed. Aherne did not attempt it. J. P. Brettal (2½ Connaught) fell, and his trouser leg got mixed up with the primary chain; which happened first no one knew. C. L. Sprosen (on the third Connaught) whizzed round, but "conked out" in a yard or two. G. Hill (2½ Diamond) ran up a grass bank of 1 in 2, but recovered. W. Danskin (3½ Rudge) had a hectic time, but F. Sibley (similarly mounted) was good.

R. Duke (4 Triumph), W. B. Gibb (3½ Douglas), G. Butcher (3½ Sunbeam), and F. Adam (3½ Norton) were, in the order named, best of the soloists; C. Atcherley and H. J. Stretton Ward (both on

Rising Sun Hill did not trouble many on Saturday. H. Boynton (7 James sidecar) made a very fast ascent.

Triumphs) had rough passages. A. E. Rollason, W. T. Woodcock, and T. Blumfield (on Ariels), L. Paynter (4 Norton), and F. Begley (4 Indian), all merited a "v.g." H. Prosser (3½ Ariel) tried to get round at speed, but did not succeed.

When the first sidecar (F. A. Watson's 3½ Sunbeam) danced round on one wheel and overturned, a relief party was quickly organised—and had a busy time! In an endeavour to keep the machine from lifting, Mrs. Bladder got too far on to the New Imperial carrier, and, defying all known rules, the outside sidecar wheel lifted. The first passenger machine to take the turn successfully was H. V. Collins's Norton. Then Hall's O.K., with a scared-looking passenger, repeated the unicycle stunt, but recovered; the second O.K. sidecar failed completely. L. Newey (6 Ariel sc.) and H. G. Uzzle (8 New Imperial sc.) were both good, as was T. F. Watson (4 Norton sc.), whose passenger seemed most unconcerned. After

a remarkably fine climb, Smith (on the little Morris outfit) broke his belt. His active passenger did not avail Beesley (3½ Sunbeam sc.) this time, and it took four strong men to push the outfit up. Then, taking just the correct wide turn, H. Boynton (7 James sc.) made the star sidecar ascent of the day, and was only beaten by the three Morgans and two of the G.N.'s; Eastwood (on the third) failed after five or six spectacular attempts.

After this, the remainder of the trial seemed easy, and even Rising Sun caused few failures. Both the O.K. sidecars were good, but Smith's Morris was even faster—until his belt again broke.

There were time checks at Winchcombe and at the top of Willersey, and then plain sailing to the finish on the Birmingham-Alcester Road, which had also been the scene of the start.

The organisation was excellent; and the arrows, if not too judiciously placed, were plentiful.

KNOCK-OUT HILL-CLIMBING AT AYR.

THE Glasgow Motor Cycle Club brought its competition season to a close by holding a very successful knock-out hill-climb on the Asylum Brae, near Ayr.

The handicapping, which is always a difficult business, was good, and almost all the events were fought out within a few yards of the finishing line.

Douglas Alexander rode his experimental overhead valve Norton, the same as he had at Ballagoich, and although he seemed to have got a few more m.p.h. into it, he failed to catch George Kelly (2¼ A.J.S.) in the 600 c.c. class. When riding his 7.9 h.p. Indian, however, he

won both the events in which he entered. The Barr and Stroud sleeve valve machine was the dark horse of the afternoon. It was ridden in the first five events by R. D. S. Barr and G. H. Wilson, and was only beaten by George Kelly in the 350 c.c. class. It was unfortunate that the magneto gave out at this stage, and it was withdrawn from the rest of the classes in which it was entered.

This is the first knock-out hill-climb held in the West of Scotland, and, from a spectator's point of view, it is to be hoped it will not be the last. It is undoubtedly more interesting to watch two

men riding against one another than to see a solitary competitor riding against time. Results:

350 c.c. SOLO.—General: 1. G. H. Wilson (2¼ Barr and Stroud). Experts Barred: R. D. S. Barr (2¼ Barr and Stroud). Open Scratch: Geo. Kelly (2¼ A.J.S.).

600 c.c. SOLO.—General: G. H. Wilson (2¼ Barr and Stroud). Experts Barred: R. D. S. Barr (2¼ Barr and Stroud). Open Scratch: Geo. Kelly (2¼ A.J.S.).

1,000 c.c. SOLO.—General: Geo. Kelly (2¼ A.J.S.). Experts Barred: J. Beck (3¼ Brough). Open Scratch: D. S. Alexander (7.9 Indian).

600 c.c. SIDECARS.—General: Geo. Kelly (2¼ A.J.S. sc.). Experts Barred: R. Watson (4½ Humber sc.).

1,000 c.c. SIDECARS.—General: D. S. Alexander (7.9 Indian sc.). Experts Barred: R. Watson (4½ Humber sc.).

CLUB NEWS

The club movement shows no tendency to decelerate its rapid march of development. Every town has its club; old boys' associations are finding a common interest in motor cycles—a happy means of preserving schoolmate friendships in manhood. Most large works, and large garages, too, have their motor cycle clubs. Above is seen a turnout of the employees of Messrs. Herbert Robinson, Ltd., the Cambridge agents, on the occasion of their recent trial.

Cardigan and District M.C. and L.C.C.

We are asked to make it clear that this club was not responsible for the hill-climb to have been held at Pentrecourt on the 6th inst., and which was apparently abandoned.

Birmingham M.C.C.

Although gold medals in the sporting trial (described in *The Motor Cycle* of the 6th inst.) could have been won by any competitor whose total marks were 95% of those of the best performer, only one qualified. B. Kershaw (2½ New Imperial) won the silver cup for the best performance, and H. V. Collins (3½ Norton sc.) was the gold medallist.

Lincolnshire M.C.C.

There was not a very large entry, but some good riding and skilful gear manipulation was witnessed at the hill-climb on Willingham Hill on the 8th inst. The fastest time of the day was made by A. B. Hodgson on a 3½ h.p. Sports Sunbeam. Results:

275 c.c. SOLO.—1, Mrs. M. C. Jennison (2½ Velocette), 35s.; 2, C. H. Gosling (2½ Lewis), 43s.; 350 c.c. SOLO.—1, Mrs. Jennison (2½ Velocette), 56s.; 2, F. C. Cotton (2½ Douglas), 37s.; 3, G. H. Gosling (2½ Lewis), 51s.; 550 c.c. SOLO.—1, A. B. Hodgson (3½ Sunbeam), 40s.; 2, N. Plastow (3 A.B.C.), 33s.; 3, A. M. Burgess (3½ Norton), 35s.; 750 c.c. SOLO.—1, A. B. Hodgson (3½ Sunbeam), 40s.; 2, N. Plastow (3 A.B.C.), 30s.; 3, J. T. Margrave (3½ Norton), 32s.; UNLIMITED SIDECARS.—1, A. B. Hodgson (3½ Sunbeam), 37s.; 2, A. E. Robson (8 Zenith), 13s.

Stourbridge and District M.C.C.

Results have now been announced of the annual autumn half-day trial, which was held on October 1st over an eighteen-mile circuit, covered twice, including the following hills: Hagley Wood, New Valton, Shut Mill, and Beacon.

WALLACE CUP, for Best Performance of the Day—The J. Doshier (Enfield sc.) and F. S. Barnes (Sunbeam).

STOUR VALLEY CUP AND GOLD MEDAL: Best Performance by a Private Owner on a Machine under 275 c.c.—S. Downing (Velocette).

SILVER MEDALS.—J. Doshier (Enfield) and F. Barnes (Sunbeam).

BRONZE MEDALS.—D. Greig, G. L. Gardner, Brookes, W. Worrall (Sunbeams), E. Griffiths, V. E. Smith (Nortons), F. Ferriday, H. Robinson (Nortons), A. E. Rock, S. Rock (Rocksons), and Lewis (B.S.A.).

TEAM PRIZE.—The "Cripples'" team: Messrs. Greig, Gardner, and Barnes (Sports Sunbeams).

Week-end Club Events.

Oct. 22.—West Kent M.C.C. Speed Judging Test.
Oct. 22.—Birmingham University M.C.C. Run to Twyford.
Oct. 22.—Liverpool M.C. Percy Butler Shield Second Half-day Trial.
Oct. 22.—Taunton and District M.C. and L.C.C. Annual Dinner.
Oct. 23.—Ilkley M.C. and L.C.C. Autumn Reliability Trial.
Oct. 23.—Halifax and District M.C.C. Run to York.
Oct. 23.—Sheffield M.C.C. Run to Budby Wood.
Oct. 23.—Rochester, Chatham, and District M.C. and L.C.C. Surprise Run.
Oct. 26.—Eastbourne and District M.C.C. Annual Dinner.
Oct. 26.—Leeds M.U. Whist Drive and Dance.

Uxbridge and District L.C. and M.C.C.

This newly-formed club held a very successful reliability trial to Eastbourne on October 2nd, with the Committee Cup as premier award. Results:

COMMITTEE CUP AND GOLD MEDAL: W. Milligan (3½ Sports Sunbeam).
SILVER MEDAL: H. Robinson (2½ Wooler).
BRONZE MEDALS: H. S. Milward (3 A.B.C.) and R. Donaldson (3½ Norton).

North Wales M.C.C.

Four well-known Welsh hills—Alt-y-Bady, Dolywern, Sun Trevor, and Conquering Hero—were included in the club's sporting trial, which resulted as follows:

PREMIER AWARD (for the best performance of the day): W. Edwards (4 Powell).
GOLD MEDAL: J. O. Jones (4 Triumph).
SILVER MEDAL: J. H. Fox (4 Norton).
BRONZE MEDAL: W. Williams (5-6 Raleigh).
CLUB PRIZE: J. H. Davies (3½ Sunbeam), F. T. Jones (3½ Sunbeam), and W. Williams (5-6 Raleigh).

TO CLUB SECRETARIES.

"The Motor Cycle" Film will shortly be available for loan to enterprising clubs who are keen to make their winter social events a success. This exclusive film takes approximately an hour to exhibit, and the programme includes scenes at the Junior and Senior T.T. Races, the 500 Miles Race, the Six Days Trials, and the Grand Prix Car Race. Club secretaries should write to the Editor (Film Department), "The Motor Cycle," Coventry, suggesting two or three alternative dates on or after the Olympia Motor Cycle Show.

Herts M.C. and L.C.C.

Formed during the early part of the year, with H.Q. at Hatfield, the membership of this club has increased weekly, and several most enjoyable events have been organised. The competition season finished up a fortnight ago with a most successful map-reading and speed-judging contest over a course of eighty-five miles, for which there were nearly thirty entries.

Members are now being enrolled for next year, and all interested should write to the hon. sec., Mr. D. C. Archer, "The Hawthorns," Hoddesdon.

Coventry and Warwickshire M.C.

Results have now been worked out of the Manville Trophy trial, described in *The Motor Cycle* a fortnight ago. Eleven competitors in the motor cycle class lost no marks, but the acceleration test gave first place to R. A. Grindlay (3 A.B.C.), an A.B.C. thus winning the trophy for the second year in succession. G. W. Ravenhall (3½ Rover sc.) wins the gold medal in the sidecar class, while silver medals are awarded to all who lost no more than twenty marks.

Yorkshire Centre A.C.U.

At a Board meeting of the Centre, held in Leeds on the 10th inst., it was unanimously decided that the one open event which is to be allocated to the Centre for 1922 be a reliability trial. It was proposed by the Ilkley Club and seconded by the Bradford M.C. and L.C. Club that a "colonial" trial be arranged (worse than the Scott course) with a loop course for sidecarists. The Harrogate Club proposed that the event be run by the Centre officials, and not allotted to a club to organise. The Yorkshire Centre promises a real sporting event next year, and they can certainly provide the course. The next meeting of the Board will be at 4 p.m., Saturday, November 19th, at the Hotel Metropole, Leeds, to be followed by the first annual dinner at 6 p.m. the same day at the Victory Hotel, Leeds. It is hoped that Colonel Brereton and Mr. Loughborough will be present on this occasion.

Proposed Stranraer M.C.C.

Those interested in forming a club as above might communicate in the first place with Mr. D. Lang, 12, Hanover Street, Stranraer.

Stocksbridge and District M.C. and L.C.C.

On October 8th the club held its Thompson and Webb Trophy reliability run over the same course used by the Sheffield and Hallamshire M.C.C. on the annual Traders' Trophy run. The winners (now confirmed) are:

1. Len. Hayward (3½ Sunbeam); 2. W. Brown, jun. (7-9 Harley-Davidson sc.); 3. C. W. Hayward (5-6 Clyno).
- Best Lightweight and Special Prize: H. Webb (2½ New Imperial).

Loughborough and District M.C.C.

The club has arranged for the presentation of the East Midland Centre Cup to take place at the smoking concert, to be held on Friday, November 4th. A whist drive is to be held in the Corn Exchange on Wednesday, November 23rd, and it is also suggested that application be made for the use of *The Motor Cycle* cinematograph film of the principal events of the year.

Guernsey M.C.C.

On Thursday, the 6th inst., a successful reliability trial was run over a thirty-eight miles give-and-take course in Guernsey. The fifty-nine entries included nine from the neighbouring island of Jersey. Mr. Geo. H. Lock, local A.C.U. consul for Guernsey, was responsible for the organisation.

The premier award was the Thomson reliability cup, the full results being as under:

1. J. Roberts (2½ Coventry Eagle), single-gear; 2. S. Arnold (2½ Douglas); 3. P. Manger (4 Verus-Blackburne); 4. A. Lewis (2½ Douglas); 5. A. Candey, Jersey (4 Triumph).

An allowance of 20% was made for single-gear machines.

Leinster M.C.C.

A reliability trial from Dublin to Enniscorthy was held on the 8th inst., with the following results:

CAPTAIN'S CUP (for machines up to 350 c.c. solo, or sidecar machines up to 600 c.c.).—C. S. Maguire (4½ Humber sc.).

CARTER-DRAPER CUP (for machines over 350 c.c. solo, or sidecar machines over 600 c.c.).—J. Brown (4 Douglas).

GOLD MEDAL.—J. Brown (4 Douglas).
SILVER MEDAL.—T. E. Green (2½ Enfield).
T. F. Slevin (2½ Velocette), T. Henry (2½ Velocette), J. A. Carvill (4 Triumph), R. Murphy (4 Triumph), G. A. Daly (4 Triumph), H. Adair (4½ B.S.A. sc.), Hon. H. Massy (7-9 Harley sc.), F. Holmes (8 Enfield sc.), and R. Walsn (2½ Coulson B.).

BRONZE MEDALS.—J. W. Lacy (8 Sunbeam sc.), James Adair (4½ B.S.A. sc.), John Adair (4½ B.S.A. sc.), W. E. Gilmour (4 Douglas), P. Smyth (7-9 Indian sc.).

Redditch and District M.C.C.

The club's most important event of the season, a one-day reliability trial, with the B.S.A. and Terry Challenge Cups as premier awards, was held on Saturday, October 8th, over an interesting course, which embraced both the Cotswolds and the Clent Hills.

Forty competitors, comprising twenty-four solo, ten sidecar, and six cycle car riders, started from Redditch Gasworks, and followed the usual route to Saintbury Hill, where a re-start and low-gear speed test was observed. A colonial stretch over the Cotswolds brought the competitors to Winchcombe; and, after a loop to Rising Sun Hill, a return to Winchcombe was made for the purpose of a time check. Owing to the prolonged tropical weather, all hills were quite dry, and the going was so good that only five failures were observed on Rising Sun.

Shut Mill Hill—almost unrideable in wet weather—was also quite dry, but sufficiently severe to cause twelve failures, principally because of the deep ruts.

The provisional list of results is given below; and an observation of the few competitors to finish with 100% marks

to their credit will indicate the severity of the course even under summer conditions. The trial was open to members of all the clubs in the Midland Centre A.C.U.

B.S.A. CHALLENGE CUP AND GOLD MEDAL.

—B. Kershaw (2½ New Imperial).

TERRY CHALLENGE CUP AND GOLD MEDAL.—H. Boynton (6-7 James sc.).

REDDITCH AND DISTRICT M.C.C. CLUB CUP.

—L. Sealey (3½ B.S.A.).

GOLD CENTRE MEDALS (100% marks).—A. Norton (4½ B.S.A.), H. Walker (6-7 B.S.A.), L. Sealey (3½ B.S.A.), B. Kershaw (2½ New Imperial), J. Doshier (8 Enfield sc.), H. Boynton (6-7 James sc.), and G. Silk (8-7 G.N.).

SILVER MEDALS (90% marks).—F. Howles (5 Brough), T. Weaver (2½ Verus), G. Mason (2½ Connaught), R. Brown (3½ Sunbeam sc.), E. Smith (3½ Norton sc.), H. Malins (8-7 G.N.), J. Cave (8-7 G.N.), F. Bicknell (2½ Enfield), and T. Wood (2½ Verus).

BRONZE MEDALS (75% marks).—H. Ward (4½ B.S.A.), J. Lidstone (2½ James), C. Jenkins (4½ B.S.A. sc.), and S. Lewis (6-7 B.S.A. sc.).

TEAM PRIZE.—E. Smith (3½ Norton sc.), B. Kershaw (2½ New Imperial), and T. Weaver (2½ Verus).

Woolwich, Plumstead, and District M.C.

More detailed results have now been issued of the Matchless Cup open trial, which was described last week. Results:

MATCHLESS CUP AND GOLD MEDAL.—C. R. Collier (8 Matchless sc.).

FIRST-CLASS CERTIFICATE AND GOLD MEDAL.—C. E. Stacey (2½ Verus), P. Cunningham (3½ P. and M. sc.), and W. B. Mills (6 Clyno sc.).

FIRST-CLASS CERTIFICATE.—T. J. Ross (8 Matchless sc.), R. B. Clark (8 Matchless), F. O'Brien (8 Matchless sc.), S. A. McCarthy (5 Stanger), F. J. Watson (6 Ariel sc.), E. W. Giles (7 A.J.S. sc.), R. G. Mundy (7 A.J.S. sc.), and W. C. Hemy (7 A.J.S. sc.).

TRADE TEAM WINNERS (Gold medals).—F. W. Giles (7 A.J.S. sc.), R. G. Mundy (7 A.J.S. sc.), and W. C. Hemy (7 A.J.S. sc.).

SOUTH-EASTERN COUNTIES INTER-CLUB CUP WINNERS.—Woolwich, Plumstead and District M.C. Team A: C. R. Collier (8 Matchless sc.), T. J. Ross (8 Matchless sc.), and A. H. Hiley (8 Matchless sc.).

BEST PERFORMANCE BY A WOOLWICH CLUB MEMBER (outside the Matchless Cup winner).—F. O'Brien (8 Matchless sc.), Duncan Best Cup and gold medal.

BEST PERFORMANCE BY A LADY.—Mrs. M. Hardee (8 Matchless sc.), special prize.

BEST PERFORMANCE IN THE TRIAL (outside the Matchless Cup winner).—F. J. Watson (6 Ariel sc.), gold medal.

"THE MOTOR CYCLE" FILM.**Enthusiastic Reception of the Cinema Record of 1921 Events.**

APPPLICATIONS for *The Motor Cycle* film are already pouring in, and those clubs which wish to book a definite date are advised to lose no time in making their preliminary arrangements. As far as possible dates will be allocated in order of receipt, but future suggested dates should be after the Show at Olympia (November 23th-December 3rd).

Club secretaries are, in some cases, arranging with their local cinema managers; there is little difficulty in arranging the inclusion of a film such as *The Motor Cycle* record of 1921 events

as an addition to the usual programme. As a spectacular picture it is almost as interesting to the general public as to the enthusiastic motor cyclist. This scheme overcomes the difficulty of hiring a special hall, projector, and screen, which more ambitious proposal is being adopted by some of the A.C.U. centres.

Tabloid History of the Year.

Many of our readers have no doubt already seen fleeting glimpses of the T.T. on the screen—incidents that are just becoming interesting when—flicker!—a fashionable wedding or foundation stone

laying abruptly breaks the spell. For a whole hour *The Motor Cycle* film shows motor cycle history being made, not only in both Tourist Trophy Races, but in the 500 miles race at Brooklands and the A.C.U. Six Days Trials, and, to lend variety, there are several exciting scenes from this year's car Grand Prix at Le Mans.

Club secretaries who have already made applications will be informed as soon as possible if their suggested dates are confirmed. Enquiries should be addressed to the Editor (Film Dept.), *The Motor Cycle*, Hertford Street, Coventry.

EASTERN CENTRE PREMIERSHIP.

ON Saturday, the clubs comprising the Eastern Centre A.C.U. held a reliability premierships trial. The start took place from the Great White Horse, Hintlesham, nr. Ipswich, and the course consisted of a circuit of thirty miles covered four times, making 120 miles in all. Much of the surface was of a "colonial" nature, including several watersplashes, some of these being very deep. Not a single competitor made an absolute non-stop run. Marks were given

for reliability, and there was also an engine starting test (held after the lunch stop), competitors having to start their engines within five seconds. In the afternoon, a slow-running test was held on a gradient, the maximum speed allowed being 5 m.p.h. This was followed by an acceleration test, in which the best man in each class established a standard, the others losing marks proportionately. L. F. McCaigie (7-9 Harley-Davidson sc.) made the best performance of the day. Results:

350 c.c. CLASS.—S. M. Greening, Essex M.C. (2½ Verus-Jap), silver medal; H. W. Harrington, Essex M.C. (2½ Douglas), bronze medal.

500 c.c. CLASS.—T. P. Hemman, Norfolk M.C. and L.C.C. (3 A.B.C.), silver medal; E. H. Gowing, Norfolk M.C. and L.C.C. (3½ Sunbeam), bronze medal.

750 c.c. CLASS.—E. A. Collier, Essex M.C. (4 Indian Scout), gold medal; W. J. Pretty, Ipswich and District M.C.C. (4 Triumph), silver medal; C. E. Danks (4 Harley-Davidson), silver medal; E. T. Elliott, Essex M.C. (4 Indian Scout), bronze medal.

1000 c.c. SIDECAR CLASS.—L. F. McCaigie, Ilford M.C.C. (7-9 Harley-Davidson sc.), gained premier award and gold medal; H. W. Wheeler, Norfolk M.C. and L.C.C. (8 New Imperial sc.), bronze medal.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

A MAGNETO TO DYNAMO CONVERSION.

? Is it possible to convert a Dixie magneto into an a.c. dynamo? If so, would you please tell me what length and gauge of wire to use in the armature? I want it to illuminate about two six volt lights. —J.H.H.

It would no doubt be possible to convert the Dixie magneto into an a.c. generator, but the instructions for so doing cannot possibly be given in a paragraph. You should obtain a simple handbook, such as can be bought at any good booksellers, on the making of small electrical instruments, in order to gather a general idea as to the method of procedure. We would suggest that 20 gauge or 22 gauge cotton-covered wire would be suitable. Get as much as possible on to the original armature core.

CARBURETTER ADJUSTMENT OF OLD ENGINE.

? (1.) Some time ago I bought a Binks carburetter for my 1910 2½ h.p. Douglas. When received, the jets were 0, 3, and 7 respectively, but with these the consumption was abnormal. Now I use 000, 00, and 2, and still cannot get more than 40 m.p.g. Everything seems all right; no leakage past the jets, or any other part of the carburetter. I wonder if the jets are still too large, as when extra air is admitted the machine gains speed. I tried for air leaks round the induction pipe with petrol, but all was tight. The speed, I may say, is anything from 28 to 30 m.p.h. with a.o.i.v. (2.) The spark occurs at top dead centre with the lever three-quarters retarded. Is this correct? (3.) As there seems to be a waste of power with the lever fully advanced, would I gain anything by timing the spark to occur at top dead centre, the lever fully retarded. —F.S.

(1.) If the speed increases permanently when the extra air is opened (on all the jets) it is evident that the mixture is too rich, and smaller jets should be fitted. Try 0000, 000, and 2, and if these do not give a satisfactory result, write to the makers of the carburetter. It is just possible that the high consumption is due to some other cause, such as excessive belt slip, or faulty compression, or weak valve springs. (2.) The spark is timed more or less correctly, but it might be retarded a little. (3.) The most suitable timing would be for the spark to occur when the piston is on top dead centre with the control lever two-thirds retarded.

REPLACING SINGLE WITH TWIN ENGINE.

? I am running an Invicta with 500 c.c. Abingdon engine, and am thinking of fitting a 5 h.p. twin J.A.P. I take it that, owing to the more even torque and less impulse per cylinder, the frame would not be stressed any more than at present. Will you be good enough to give me your opinion as to this? —C.F.B.

You will be quite safe in fitting the 5 h.p. twin-cylinder engine to a frame which was designed for a 500 c.c. single-cylinder. As you suppose, the more even torque and smaller impulses will stress the frame even less than the normal engine does.

Important Dates.

Fri., Nov. 4th, to Sat., Nov. 12th—
Automobile Exhibition, Olympia and
White City. (See "The Autocar.")

Sat., Nov. 5th—Midland Centre A.C.U.
Open Reliability Trial.

Mon., Nov. 28th, to Sat., Dec. 3rd—
The Olympia Motor Cycle Show.

Sat., Dec. 3rd to Tues., Dec. 13th—
Brussels Show.

Mon., Dec. 26th, Tues., Dec. 27th—
M.C.C. London-Exeter London Trial.

Sat., Dec. 31st.—N.W. London M.C.C.
Twelve Hours Open Winter Trial.

Fri., Jan. 27th, to Sat., Feb. 4th, 1922—
Scottish Car and Motor Cycle Show.

CHANGING A GEAR BOX.

? A 6.8 h.p. Champion-Jap combination (late 1916), which was fitted with a four-speed Jardine gear box, became unserviceable owing to someone tampering with the kick-starter and clutch, and the gear box was rendered irreparable. However, I am thinking of having a Sturmey-Archer gear box fitted, and wish to know (1) whether there will be much alteration to be made on the machine; and also (if there is not) (2) how I shall have to set about the conversion? The machine is a chain-cum-belt drive. —F.R.J.

(1.) It will probably be necessary to have a bracket suitable for carrying the Sturmey gear box, brazed into the rear stays of the machine. (2.) It would be best to consult the makers of the machine, as they have now adopted this make of gear box as standard, and could probably supply a complete conversion set.

ADAPTING A DYNAMO.

? I have a dynamo developing six volts two amperes at 3,000 r.p.m. Will you please tell me if this could be suitably fixed up to light a head light on a countershaft Triumph; and, if so, would you mind telling me what you would consider the best method of carrying this out? Would it be possible to light the lamp direct from the dynamo? —W.S.W.

Not knowing the dynamo which you mention, it is impossible to give you a definite answer; but, in all probability, it is one designed to run at a constant speed, and possibly also may not be suitable for use in a position where it would be exposed to the weather. If there is no speed or output regulating device it will certainly not be satisfactory to use it on a motor cycle, since its speed would be continually fluctuating. It would be absolutely essential to use accumulators in the system; if the lamps were directly connected their life would be short.

COMPLETING A PURCHASE.

? Having paid a deposit of £1, leaving a balance of £26 10s., on an old sidecar outfit, I do not wish to go any further with the matter, but unless the balance is paid within a week the seller has threatened me with county court proceedings. I have signed no form or agreement with him, but have admitted the payment of £1 in a letter. Can he compel me to complete the payment? If so, have I the right before paying the balance of demanding him to prove to me, in an actual test, that the machine will do what he has claimed for it, i.e., is an excellent hill-climber, with plenty of power and in perfect running order? To do so, he would first have to take out a licence, which, I presume, he is not willing to do. —J.C.

The payment of a deposit on account of the price of the machine constitutes a contract to complete the purchase, and the owner will be within his rights if he takes steps to obtain the balance. Apparently there is no obligation on his part to demonstrate the machine; but, if it does not conform to his guarantee when you receive it, you might recover some portion of the purchase price if you take action against him for misrepresentation. If you do not complete the purchase there is nothing to prevent the owner selling the machine for the best price possible and suing you for the difference between what he obtains and what you should pay.

READERS REPLY.

A KNOCK AT SPEED.

With reference to "A.R.H.B.'s," "H.H.C.A.'s," and others' remarks and tips about the Junior Triumph in your issues of September 1st and 22nd, I own such a machine, which has served me in a similar manner to your correspondents. The metallic clanking after climbing long hills on top gear is certainly due to enlargement of the deflector sides. Mine used to scrape the cylinder, but I filed both sides to give a slight clearance, and that noise did not recur, as I recently climbed a hill three miles long on top gear, rise about 800ft., and had no sign of the noise at all. Regarding sticking of the top piston ring, mine always got stuck near the peg. I fancy this is due to the peg boss being so near the underside of the deflector that that little lump of metal permanently distorts the ring slots. I have in some measure cured my trouble by emery papering and filing the top of the ring for about half an inch or so each side of the slit. To keep the top of the deflector as free as possible from overheating, it is advisable thoroughly to scrape out the carbon inside the deflector. I recently obtained just under $\frac{1}{2}$ oz. from underneath mine. With regard to magneto timing, mine was timed in the orthodox way; but as I could not get more than about 18-20 m.p.h. with this, I experimented, and found the best position to be with the lever fully retarded, the points breaking with the arrow at six minutes to twelve. It is just possible that there is a certain amount of lag in my magneto, which is a Bosch. With this setting and spark lever two-thirds advanced, the machine will hum along at nearly 30 m.p.h. without any sign of overheating or distortion, gentle rises or long slight up grades making very little difference to the pace. I might mention that the crank case compression, bearings, rings, etc., are in as good order as possible, and the compression with the engine either cold or hot as near perfection as no matter. The slits in the exhaust pipe should be scraped out and kept open, and the pipe kept as free from deposit inside as possible. The squashed end, if made as near circular in section as it can be, assists matters considerably. The exhaust system would benefit if an auxiliary pipe were added in substitution for the left end plate of the exhaust box. This makes a great improvement, and necessitates less frequent cleaning of the present pipe fitted as standard.—C.A.F.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned. T.T. Rudge-Multi solo; speed on hills, with sidecar: Consumption with makers' or other carburetter.

"G.A.P." (London, N.W.1.).—1921 T.T. Rudge Multi solo: Speed on hills, consumption, belt wear, noise of o.h.v., reliability, and comfort.

"G.W.C." (Wallasey).—1920 $4\frac{1}{2}$ h.p. Quadrant with sidecar: General performances, reliability, consumption, and speed.

"I.R." (Banwell).—F.E.W. valve attachments on single-cylinder.

In Denmark.

Eight hundred kilometres (approximately five hundred miles) were covered in a recent twenty-four hours trial held at Copenhagen. Two Wolf lightweights, with Villiers engines, were successful in completing the course without loss of marks.

Found on the Road.

Mr. P. Butcher, of 257, South Street, Garrowtree, Rotherham, found a lady's black mackintosh between Bubwith and Selby on the 2nd of this month, while on the day previous a 6 volt dry battery was picked up near Hailsham by the Rev. G. H. West, of St. Christopher's, Eastbourne.

Show of Used Vehicles.

It has been decided to hold the third automobile show of used motor vehicles in the City Hall, Manchester, from November 5th to 19th. A motor bicycle anticipated to fetch a price up to £75 if of 1921 or 1920 manufacture will be admitted on payment of £2; 1919, or earlier, £2 10s. Sidecar outfits and cycle cars, 1921-1920 models, £2 15s.; 1919, or earlier, £3 10s. If the desired price is up to £100 the entry fee would be increased 5s.

Mr. W. Glass, 12, Buckingham Street, Strand, London, W.C.2, the organiser of the show, has arranged for this to take place immediately before the Olympia Motor Cycle Show, so that it gives motor cyclists anxious to buy new machines a chance of selling their old mounts.

Works Trials.

The prize distribution in connection with the recent Humber trial took place early this month at a social gathering under the presidency of Col. Cole, O.B.E., managing director of Humber, Ltd. Efficiency certificates were awarded to 66% of the entrants in the trial.

The first motor cycle competition ever organised for the employees of John Marston, Ltd., was held on Saturday, October 1st. It consisted of a mixture of paperchase, distance-judging, and speed-judging. Mr. A. S. Bowers (managing director) acted as starter. Mr. J. E. Greenwood (designer) was "hare," and Messrs. T. C. de la Hay and P. W. Bischoff shared the timekeeping and checking.

Each rider was given a different (and secret) speed at which to ride, and he had to find and follow the course and finish as near to his time as he could guess it, watches and speedometers being barred. The winner was A. Cowan (2 $\frac{1}{2}$ Sunbeam sc.). The speed set him was 14.41 m.p.h., and he was only 8s. out at the finish. N. W. Bowkett was second, and C. E. Greenwood third. There was also a sweepstake on estimating the exact distance, which was 23.8 miles. Cowan's passenger, M. Harper, was only 362 yards out. After the finish, a large party sat down to tea at the Stewpony Hotel. The next Sunbeam works competition is fixed for Saturday next.

Stabilising Second-hand Values.

A scheme whereby they are prepared to allow 75% of the catalogue price for any machine purchased from them if returned in good condition within twelve months is being inaugurated by Vivian Hardie and Lane, Ltd., 24, Woodstock Street, London; W.1.

A Useful Oilcan.

In order to popularise their motor cycle oils Alexander Duckham and Co., Ltd., have offered to present a quart can of motor cycle oil to any reader who cares to apply for one at their City Depot, 4, Broad Street Place, London, E.C.2. All the reader has to do is to mention *The Motor Cycle* and to state the particular machine for which the oil is intended. The cans are fitted with telescopic spouts.

It is interesting to note that R. Croucher, who rode an 8 h.p. Matchless sidecar outfit in the A.C.U. Six Days Trials, used Duckham M.C.6 oil, and showed a consumption of 1,557 m.p.g.

The A.A. and M.U. Handbook.

The new edition of the Automobile Association and Motor Union handbook, which is issued annually to members, contains a vast amount of information for motorists, including taxation regulations, particulars of licence cards, and conditions which must be observed when buying or selling new or second-hand motor vehicles. A considerable portion of the book is devoted to the advantages of membership and to the services rendered to members by the A.A. road patrols. The Association is gradually replacing the pedal cycles by motor cycles, giving the road organisation greater mobility, and allowing the patrols to cover larger areas. Another interesting development is the provision of road service outfits carried on sidecars. The Association has also issued a road map of London so as to allow members to get from central or other points of London on to the main arterial roads, and also to enable motorists who are travelling from one side of the Metropolis to the other to traverse a route which avoids the more congested portions. On the back of the map is an excellent street plan of London.

Catalogues Received.

Dunlop Rubber Co., Ltd., 41, Easy Row, Birmingham: Revised lists of motor cycle tyre and belt prices.

Ferodo, Ltd., Chapel-en-le-Frith, Derbyshire: Catalogue of Ferodo friction linings for brakes and clutches.

John Marston, Ltd., Sunbeamland, Wolverhampton: A handsome brochure, describing Sunbeam performances in the Senior T.T. races of 1914, 1920, and 1921, as well as in the last French Grand Prix.

Cromwell Engineering Co., 327, Putney Bridge Road, London, S.W.15: Spare parts lists of the Sturmey-Archer three-speed countershaft gear and of the Sturmey-Archer and Armstrong motor cycle hub gears, together with hints on fitting and adjusting.

Allen-Liversidge, Ltd., 106, Victoria Street, S.W.1. In addition to the manufacture and supply of cylinders of dissolved acetylene and motor cycle lamps, this concern makes a speciality of and catalogues oxy-acetylene welding and cutting equipment, which is largely used in the motor and motor cycle trades.

Don't give it up!—

There is no reason why you should give up motor cycling for the winter. With proper clothing, and the right machine you will find it just as cheap, just as quick and convenient, and even more sporting and enjoyable than summer riding.

But treat yourself to the right machine. Examine the design and finish of the Beardmore-Precision. For its first cost you get first-class value. Then—

it is cheap to run and maintain; simple, safe, and comfortable to drive; and can be hosed down in three minutes after a muddy run, and left to dry without damage.

To enjoy the winter you must have

the weather-proof
BEARDMORE
Precision
MOTOR BICYCLE

THREE MODELS.

At £85 : The luxurious spring-frame Beardmore-Precision, with :—The Precision 350 c.c. two-stroke engine, developing over 4 h.p. Detachable cylinder head. Automatic lubrication. Precision patent two-speed in unit with engine. Clutch and kick-starter. All-chain drive with shock absorber. Full Cantilever spring frame. Petrol tank (two steel pressings welded together), mudguards, and toolcase form part of frame. Band brakes. Footboards and legshields in one. All-black finish.

At £105 : The Sports Sidecar. Same as the Standard, but minus the rear springing. Light sporting coach-built sidecar, with water-proof cover-apron and windscreen complete.

At £75 : The Sports Solo. Same as the Standard, but minus the rear springing; Sturmey-Archer two-speed gear box with kick-starter and clutch; chain and belt drive; belt rim rear brake, and foot rests; weight, 195 lbs.

Both Sports Models have also a lighter pattern of rear mud-guard, carrier, and stand, and one toolbag. Any model can be fitted, if desired, with the B.T.H. Sparklight electric lighting equipment at the following prices, which include all lamps, wiring, and fitting:

Solo .. £7 10 0

Sidecar .. £8 10 0

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 12 words 3/-, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **LIFFE & SONS Ltd.,** and crossed **Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.**

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMERICAL ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1/-. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Liffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

The BRAMPTON Bi-Flex SPRING FORK

Have you noticed the large number of successful Motor Cycles in all speed and reliability trials, that are fitted with the **BRAMPTON BI-FLEX**? Here are a few reasons why:—

THE exclusive double-action principle on which the "BRAMPTON" Bi-Flex Spring Fork is designed facilitates an independent and simultaneous movement of the wheel in the direction of the lines of force produced by horizontal and vertical shocks, whilst the successful combination and arrangement of the springs, acting in compression, respond to the slightest vibratory movement or the irregularities of the worst road surfaces with masterly effectiveness.

Another feature which has contributed to make The "BRAMPTON" Bi-Flex Spring Fork famous, and so universally popular with riders, is the simplicity and efficiency of the patent adjusting arrangement of the links and rocker bars, by means of which lateral instability is entirely eliminated.

Measurement form and descriptive booklet illustrating models for Motor Cycles from 2½ h.p. upwards free on request, applications for which are invited.

BRAMPTON BROS., Ltd.,
Oliver Street,
BIRMINGHAM.

IGNITION, LIGHTING, ETC.

TANKS.—Any pattern made, repaired, re-enamelled, and returned in double quick time; first-class workmanship; trade enquiries invited.—G. Day, 27, St. Luke's Rd., Birmingham. [3653]

TRIUMPH Riders.—We are supplying a special large 2½ gallon tank for this machine; old tank taken in part payment; write for full particulars.—Forfield Motors, Forfield Place, Leamington Spa. [X0990]

TRIUMPH Riders.—Large capacity tanks, holding 2½ gallons petrol, 3½ quarts oil, fine tapered design, large dome fillers, beautifully made; £2/18, enamelled makers' colours 12/- extra.—Park Works, 1a, Paradise Rd., Highbury, N.5. [3845]

TANKS Repaired, re-enamelled; partition leakage, drip feeds, burst and smashed tanks rebuilt, etc.; re-enamelling, makers' colours, designs and transfers guaranteed; prompt return.—Park Works, 1a, Paradise Rd., Green Lanes, Highbury, London, N.5. [1759]

ASTRA

LIGHTING SETS

for

Cars and Motor Cycles

No. 2 COMPLETE MOTOR CYCLE SET includes: 4 volt, 3-4 amp., direct current charging dynamo. Head Lamp 5½ inches, best quality, with bulb and bracket. Tail Lamp with bulb, accumulator in strong metal case with clips and switches. Necessary wiring, special pulley, dynamo bracket and belt

£11-2-0

COMPLETE SIDECAR SETS

from

£12-18-4

DIRECT CURRENT CHARGING DYNAMOS.

6 volt 5 amp., £7-0-0

4 volt 3-4 amp., £5-10-0

EASILY FITTED to Triumph, Douglas, Zenith, Norton, A.J.S., Blackburne, etc., and all outside flywheel machines.

ALL TYPES OF MOTOR LAMPS AND ACCESSORIES SUPPLIED.

Full particulars of 6 volt MOTOR CYCLE SETS, AND LIGHT CAR SETS from:

THE
ASTRA DYNAMO Co.
110, VICTORIA ST., S.W.1.

Telephone: Victoria 7545.

TANKS.

TANKS of every description replaced, repaired, and re-enamelled at our own works; all kinds of fittings stocked; quick service and reasonable charges. Send postage for illustrated price list to A. Green, Water St., Chapel St., Salford, Manchester. Tel.: 2191 Central. [0256]

BELTS.

NEW Clipper Belts.—8ft.×¾in. 11/6, 8ft. 6in.×¾in. 13/-. 8ft. 6in.×¾in. 14/-. 8ft. 6in.×1in. 16/9. [4976]

W.D. Belts.—6ft. 6in.×¾in. 10/-. new Pedley belts, clearance, 6ft. 6in.×¾in. 10/-. clearance belts, 6ft.×1in. 8/6. [4977]

H. EMANUEL and Co., Tyre Factors, 27, Belgrade Rd., Stoke Newington, N.16. Stores: 37a, Balls Pond Rd., Dalston, London, N. Tel.: Dalston 5161. [0726]

BALATA-CHROME Combination V Belts, suitable for variable pulleys and wet weather conditions; 500 more belts offered for trial on the following terms: ¾in. 1/6. 1in. 1/9. 1½in. 2/- per foot plus 1/- postage; fasteners 9d. each.—Pollin and Son, Hollingtoe, St. Leonards-on-Sea. [3586]

CENTRAL Garage, 302, London Rd., Thornton Heath, S.E., offer Clipper belts, brand new, packed in original cases, at the following exceptional prices: ¾in. 1/6. 1in. 1/9. 1½in. 2/- per foot plus 1/- postage; fasteners 9d. each.—Pollin and Son, Hollingtoe, St. Leonards-on-Sea. [4968]

CARBIDE.

FINEST Carbide, cwt. lots 23/6, f.o.r., c.w.o.; packed in lb. tins, gross or half gross lots, 6/9 per dozen.—Sports Depot, Denby Dale, Huddersfield. [4435]

CARBIDE, finest quality, giving 100 per cent. pure gas yield, all sizes; cwt. 30/-½-cwt. 18/-. 28 lb. 10/6; drums free.—Young, Importer, Misterton, Somerset. [7180]

CARBIDE.—Guaranteed highest quality, 24/- metric cwt., all meshes; immediate delivery; carriage forward; drums free.—Kemp's Garage, Importers, Louth, Lincs. [X0853]

CARBIDE, guaranteed maximum gas yield, British Acetylene Association standard, 25/- cwt. drums free, all meshes; stock at 22 depots; immediate delivery.—Elloc Cycle Works, Importers, Gedney Drove End, Wisbech. [3972]

CARBIDE, 25/- cwt., drum free, cash with order, free on rail Aberdeen, Bristol, Cardiff, Edinburgh, Glasgow, Gloucester, Grimsby, Hull, Leeds, London, Lowestoft, Newcastle, Preston, Manchester, Port Talbot, Runcorn, Sharpness, Swansea, Yarmouth.—E. C. Madock, Wareham, Dorset. [2596]

CARBIDE.—Immediate delivery of all sizes in 1 lb., 2 lb., and 6 lb. lever lid tins and 2 cwt. drums, labelled or plain for retailers' own labels, quality guaranteed, and all standard sizes supplied by the cheapest firm in the trade.—The Premier Lamp and Engineering Co., Ltd., Moorfield Works, Ambley, Leeds. [6312]

PATENTS.

MOTOR Cycle Manufacturers.—The owner of Patent relating to Spring Roller Motor Cycle Leg Shields, adaptable to any design machine, desires to negotiate with any firm for the sale of patent rights or the granting of licence to manufacture under Royalty.—Box 6,941, c/o The Motor Cycle. [4671]

PATENT AGENTS.

J. E. S. LOCKWOOD, 3, New St., Birmingham. 'Phone: 5816 C. Patents guide free. [9057]

CONSULTING Patent Agency, 253, Gray's Inn Rd., London.—Aero and aircraft engines. [2416]

PATENTS Advice, handbook free.—King, Registered Patent Agent, 146a, Queen Victoria St., E.C. 35 years' references. [0129]

W. BRYSON, B.Sc., Assoc. M.Inst.C.E., Chartered Patent Agent, 29, Southampton Buildings, London, W.C.2. 'Phone: Museum 3651. [1049]

FLETCHER WILSON, of Coventry, Chartered Patent Agent and Registered United States Patent Attorney.—Tel.: Wilpat, Coventry. 'Phone: 356. [X4194]

H. N. & W. S. SKERRETT (H. N. Skerrett, Fellow of the Chartered Institute of Patent Agents, A.I.Mech.E., A.I.A.E., Associate I.E.E., etc.; W. S. Skerrett, A.I.E.E., Registered Patent Agent).—Patents, designs, and trade marks.—24, Temple Row, Birmingham. Tel.: Central 1038. T.A.: Skerrett, Birmingham. [1534]

AGENCIES.

AGENCY wanted for cars, commercial vehicles, motor cycles, etc., in Rotherham district.—R. Jenkins and Co., Ltd., Engineers and Boiler Makers, Wortley Rd., Rotherham. [3697]

THE Mohawk Cycle Co., Ltd., require sole agents for their celebrated motor cycles in districts where they are not already represented.—Write for lists and terms to Mohawk Cycle Co., Ltd., Alexandra Rd., Hornsey, N.8. [2505]

CONSULTING ENGINEERS.

AUTOMOBILE Engineer and Draughtsman.—Designs, working drawings, opinions on inventions, drawings, tracings, and prints, valuations.—C. K. Shepherd, Queen's College, Paradise St., Birmingham. [3699]

GENERAL TRADE.

TO Manufacturers.—Machine work of all description wanted.—Brewster, Sparhawk St., Bury St. Edmund's. [4839]

MOTOR and Cycle Traders Only.—Trade guide and catalogue, 1,000 selling line, at right trade prices; postage 6d.—Persens Co., Burton-on-Trent. [1917]

AUCTION Sales.—Palmer's Garage, Tooting, the oldest solely motor auction rooms in London. Terms 7½%, not chargeable if machine unsold. Motor cycles and cars bought and sold for cash. Nearest good stations, Falcon Lane, L. and N.W.R. Wimbledon L. and S.W.R. and G.W.R.—Sole address: Palmer's Garage, Tooting, London. [4165]

SITUATIONS WANTED.

SALESMAN seeks position, 4 years' experience, all-round rider and driver, good education.—A. 2, Hopedale Rd., Charlton, S.E. [4534]

BUSINESSES AND PROPERTY FOR SALE, TO BE LET, OR WANTED.

COUNTRY Garage and Sidecar Manufacturing Business, established 1914; fresh £700; stock, plant, etc., £650.—Martin Langley, Pelham St., Nottingham. [4428]

MOTOR Business for sale, South Durham, situated Great North Road, excellent position; established 20 years; large local connection; extensive show windows and workshop; motor car and motor cycle agencies. Proprietor wishes to retire. Applications to view invited. —Apply, Box 6,735, c/o The Motor Cycle. [3403]

INSURANCE.

ROY'S, Ltd., effect insurances of all kinds. Enquiries invited.—170, Gt. Portland St., London. [00055]

£5/15 Covers "All Risks" for Morgans or similar three-wheeler.—Ernest Bass, 40, Chancery Lane, W.C.2. [0005]

"The Motor Cycle" Insurance Policy is the policy authorised by "The Motor Cycle," and covers motor cycles or cycles and sidecars used for private purposes. Complete comprehensive cover. Maximum benefits, minimum rates. Full particulars and prospectuses on application. The Autocar Fire and Accident Insurance Co., Ltd., 77, Cheapside, London, E.C.2. [00007]

HOTELS AND APARTMENTS.

YOUR Maiden Aunt will be charmed with the Old Barn Tea-house, Stock's Green, Hildenborough beyond Sevenoaks. [4442]

WANTED.

REX Front Forks, about 1910.—Bradstone Road Garage, Bradstone Rd., Folkestone. [4511]

SMALL Light Engine, mag., etc., about 1½ h.p., any type.—36, Whyke, Chichester. [4353]

WANTED, forked connecting rod, for 7-h.p. Peugeot.—Alcock, Rosslyn, Mill Hill, N.W.7. [4960]

3-SPEED Gear Box, K.S.; wheel with belt rim. 26 x 2½.—Cooke, 24, Duffield Rd., Derby. [4729]

£8 for chain belt gear, suitable 5-h.p.—Particulars, 17, Springfield Av., Horfield, Bristol. [4338]

WATSONIAN Sidecar, State where seen in London district.—Box 5,926, c/o The Motor Cycle. [4496]

TRIUMPH Spare Parts, large quantities; good prices given.—35, Hackford Rd., Brixton. [5172]

WANTED, surplus from manufacturers and garages.—Greve, 18, Fore St., Edmonton, London. [4211]

THREE Schebler Carburettors, suitable for Harleys, cheap.—1, Bellingham Terrace, Catford. [4771]

WANTED, front cylinder head, 1913, 7-h.p. Indian. Ashton's Motor Works, Caerphilly, Cardiff. [4339]

MORGAN, old, w.e., wanted, cheap, or exchange W.D. Triumph and cash.—R., 92, Remford Rd., Stratford. [4957]

WANTED, Enfield sidecar chassis and front forks, fit 1914 machine.—Parsons, 41, Chase Court Gardens, Enfield. [4515]

INCOMPLETE P. and M.'s or Parts, W.D. spares, bankrupt stocks, etc.—Inman, Durham Rd., Seaford, Liverpool. [3641]

PREMIER 3½ h.p. Cylinder, second-hand, good condition, 1912, or later.—Shuttleworth's, Motors, Keighley, Yorks. [3861]

ENGINE-SHAFT Gear for 5-h.p. Rex; also sidecar body, cheap; paintwork immaterial.—Laurel Farm, Headington, Oxford. [5045]

PREMIER and Triumph Parts, new or second-hand; also complete machines fit cheap.—Jack Ward, 11, Radford Rd., Leamington Spa. [X0926]

WANTED, second-hand Morgans, in good condition, not earlier 1919.—Rey's, 378-384, Euston Rd., N.W. Phone: Museum 6436. [4948]

WANTED, good up-to-date second-hand motor cycle accessories; state particulars and price.—Service Co., 292, High Holborn, W.C.1. [0671]

A.C. Sociable or Morgan Runabout wanted for cash; must be fairly modern and cheap.—Particulars to 24, Riffel Rd., Willesden Green, London, N.W. [4407]

THE MOTOR CYCLE Insurance Policy

Testimony

THIS space will be occupied each week with copies of letters from Policy holders who have made claims. Original letters may be inspected.

Sir,

I should like to express my deep appreciation of the prompt way in which you have dealt with this claim, and certainly shall have no hesitation in recommending you to my various friends.

Once again thanking you,
Yours faithfully,

The only Safe Test of Insurance is Claims. We settle Claims promptly.

The AUTOCAR FIRE and ACCIDENT INSURANCE COMPANY, LIMITED

(Incorporating The Autocar Insurance Department, Established 1904).

Head Office:

77, Cheapside, London, E.C.2.

Telephone: City 9331 and 9332.

Telegrams: "Autoinsure, Cent, London."

WANTED.

WANTED, A.J.S. parts, any condition, rear sprocket and brake complete, spare wheel and brackets, sidecar luggage carrier.—71, Twilley St., Wandsworth. [4652]

SUNBEAM Gear Box, slight repair not objected, Sunbeam front wheel brake, T.T. bars, countershaft covers wanted.—395, Yardley Rd., South Yardley, Birmingham. [X0884]

ENGINES, 4-cyl., 2-cyl., and 1-cyl. air or water-cooled; also gear boxes, spring forks, hub gears, cycle cars, and parts; state price.—19, Wilcox Rd., South Lambeth, London, S.W.8. [5094]

WANTED to purchase outright for cash, bankrupt stocks, W.D. spares, miscellaneous spares. Send full particulars.—McNeille and Platt, 57, Gt. George St., Liverpool. Phone: 1092 Royal. [2489]

EXCHANGE.

10 h.p., 4-cyl. 3-wheeler for Indian, or sell cheap.—17, Heaton Rd., Mitcham. [4761]

HUMBER 3½ h.p., 2-speed, for Antoglider; sell £50.—Hirst, 91, Falsgrave, Scarborough. [4975]

EXCHANGE 5-h.p. Rudge Combination for 4 h.p. Douglas Solo.—Knight, Holt, Wilts. [4610]

MORGAN 1920 G.P. for motor cycle and cash; sell £155.—Barnes, 50, High St., Hnll. [5058]

EXCHANGE Cycle Car Parts for Lightweight, or sell £30.—11, Vaughan Rd., Harrow. [4243]

19 14 h.p. T.T. Triumph, for old big twin, any condition.—212, Vallance Rd., Bethnal Green. [4780]

6 h.p. Zenith-Gradina, T.T., very fast thus, perfect condition, for piano.—Edgar Wroe, Wombwell. [4433]

EXCHANGE 4½ h.p. James, 2-speed, sports model, for 2-stroke.—27, Corinne Rd., Tunnell Park.—[5178]

SPORTING 1920 2-seater Light Car for combination, or sell.—21, Harrington Rd., W. Ealing. [4705]

8 h.p. J.A.P. Combination, sports, sound, for 4 h.p. solo or piano; sell £45.—11, Harriet Mews, S.W. [4379]

£40—3½ h.p. Triumph, perfect: level, higher power, Zenith, Indian preferred.—Bowers, Swanmore. [4528]

TOOLS, chest of carpenter's, full kit, for lightweight motor cycle.—Lennard, 25, Charlesworth St., N.7. [4673]

19 17 7-h.p. Harley Combination for solo or cash, or sell cheap.—145, Liverpool Rd., Islington. [4881]

19 19 Sunbeam, value £95, for lightweight or Ford.—Brewster, Sparhawk St., Bury St. Edmund's. [4639]

EXCHANGE Vindec, 2-speed, 2-stroke, for £20 and good push cycle.—40, Replingham, Southfields, S.W.18. [4997]

HENDERSON 10 h.p. Combination, for less power, Rudge preferred.—Thompson, 12, Trinity Rd., Balham. [4661]

CLEMENT TALBOT 2-seater, twin; exchange combination, small van, or sell.—51, Brighton Rd., Surbiton. [4777]

INDIAN 5-h.p., 1915, and sidecar, wants overhaul; exchange late lightweight and cash.—150, High St., Harlesden. [4634]

4-SEATER Touring Body, off Decanville; exchange van body, suitable 20 h.p., or sell.—51, Brighton Rd., Surbiton. [4778]

BABY Triumph, new condition, and £10 cash, for combination; sell 48 gns.—6, Victoria Parade, Ashton, Preston. [4734]

PILLION Seat, new, cost 70/-; exchange binoculars, aneroid, anything useful.—Denbigh, Osborne Gardens, Monkseaton. [X0845]

LIST 50 Car Bargains Free.—Combinations, motor cycles, etc., part exchange.—Douglas S. Cox, West Norwood. See Cars. [3642]

TRIUMPH, countershaft, offered with cash for A.J.S. combination 7 h.p. preferred.—The Denne, Hardwick Rd., Reigate. [4527]

SPLENDID 35-gn. Gramophone, nearly new; exchange motor cycle, cash either way.—Box 81, c/o The Motor Cycle. [4644]

19 14 h.p. New Hudson Coachbuilt Combination, perfect order, for Scott, solo preferred.—Page, Colston, Huddersfield, Glos. [4397]

EXCHANGE 1-ton Karrier lorry for motor cycle and cash.—E. Giddens, Ullesthorpe, near Lutterworth, Leicestershire. [X0789]

EXCHANGE 2-speed Coachbuilt Combination and good typewriter for 1 ton motor lorry.—Box 74, c/o The Motor Cycle. [X0913]

BRAND New Triumph Touring Bars; exchange for copper exhaust to fit 1920 Triumph.—Clarstone, Upholland, near Wigan. [4521]

ARIEL 1917 3½ h.p. Combination, accessories, perfect condition; £55; exchange lightweight.—3, Mecklenburgh St., W.C.1. [4869]

TRIUMPH 3½ h.p., 2-speed, overhauled, new tyres; £50; lightweight wanted, cash adjustment.—121, Acton Lane, London, W.4. [4860]

19 20 Scott and Millford Skiff sidecar, for 1915 or later Scott combination, any condition, and cash.—34, Hestington Rd., York. [4494]

Which Type Makes the Best Sporting Machine?

AN interesting discussion is proceeding in our pages as to which is the world's best solo machine. The debate, however, deals with makes and not types, and, as an enthusiastic owner is always ready to defend his own mount as the ideal, even if he has not sampled more than two other machines in his whole experience, allowances must be made for some of the resultant opinions. At the same time, in view of the great prominence of "sports models" in the majority of 1922 programmes, it would be useful to discuss which is the best type of sporting solo motor cycle.

It certainly cannot be said to-day that only a machine of 500 c.c. or over may rightfully claim to cater for the soloist who takes a pride in the liveliness and speed of his possession; indeed, there are one or two super-efficient 250 c.c. lightweights already on the market which cause one instinctively to wonder if anything heavier is not superfluous and will not in the near future be confined solely to sidecar haulage. Then just one step higher up the scale, we have a select band of 350 c.c. "thoroughbreds" that competition has proved very little inferior to 500 c.c. machines when matched under equal conditions.

Of course, there can be no doubt that it will be very difficult to oust the so-called "3½"—usually a single—from being the first favourite of the clubman and his like, but the matter is further complicated by signs of a distinct revival of the British sporting big twin—a type that its devotees claim has a fascination not associated with anything else on two wheels.

While a cursory consideration of the subject may incline one to a decision in favour of the smaller machines—mainly on account of their proportionately higher performances—it may also be argued that only the larger singles and big twins are really suited for trouble-free and comfortable fast touring on present-day roads. For instance, a very

large proportion of sports models are sadly under-tyred. Larger tyres on the genuine lightweights (although they are by no means the only offenders) would cause a considerable loss in liveliness. Here, then, the heavyweight school scores a distinct point.

Finally, it will be said that we have disregarded price. We have, purposely. As in the discussion regarding the "best" make of machine, it would be preferable to find the ideal type of sporting machine irrespective of cost.

The Transport Ministry.

THE recent resignation of the Minister of Transport is an event on which at present no explanatory light has been shed; meanwhile, the Ministry carries on with its Parliamentary Under Secretary as its temporary head. Meanwhile, also, the beneficent effects of the Ministry's work, which were to result upon the increased and heavy taxation of motor vehicles, remain unrealised. True, in a desultory kind of way, a few signposts have been labelled "A" or "B" to designate main or secondary roads, but perhaps the most fitting commentary on this particular branch of the scheme is the surface of Watling Street, one of the most important roads in England, linking London with the important centres of the North-west. The condition of this road, with its long straight stretches and Class A signposts, is abominable in many places.

In the unification of sign and warning posts also little appears to have been attempted, although here and there the new hieroglyphic warnings are to be seen, but "private carriage drive" signs still flourish. It must not be forgotten, however, that many dangerous corners have been eliminated.

It is not known whether the resignation of the Minister of Transport will result in the winding up of the Ministry, but motorists are wondering what use will be made of the £2,000,000 surplus of taxation over the amount that the new licence scheme was estimated to yield.

Our Roads at Night.

AFTER the last B.M.C.R.C. meeting at Brooklands, I pobbled along the Portsmouth Road, marvelling at the chaos of our laws and the consequent dangers resulting therefrom. There were lots of cyclists about—some with rear lamps and some without. The time was that awkward quarter of an hour when it has grown much too dark to see an unlighted vehicle (if the evening be gloomy), but when the law does not compel vehicles to bear lights. The traffic procession included lots of cars with powerful head lamps; some of these cars switched on dimmers or switched off head lamps as they met me, others carried on as they were. Intermixed with the stream were innumerable motor cycles mounting dazzling lights, which they could neither dim nor switch off. A more ridiculous medley of inconsistencies and perils could hardly be imagined.

So it came About.

THE nastiest of many nasty moments occurred as follows: As everybody knows, miles of the Portsmouth Road are just wide enough for two single-breadth streams of traffic, with, perhaps, squeezing space for a solitary cyclist next each kerb; and the car driver who can gauge his nearside clearance to a foot when he has a right-hand steering wheel is rare. We had all just emerged from a regular mix-up (due to an-unlit Ford lorry producing a bulge in the double stream) when a large car dashed up towards me and my followers. This large car was running on two tiny side lamps and two enormous head lamps. As it neared us, the driver—from a mistaken sense of courtesy—switched off his head lamps. When he saw that neither I nor my followers imitated his example (I couldn't), he switched them on again, and, of course, blinded us. Luckily, I had the sense to tread on everything, and stop till he was past, simultaneously flinging up my arm to prevent the people behind from ramming me in the bustle. When the dazzle had passed, I sighted a meek cyclist just in front of me, wearing a dun suit, riding a cycle on which no plating showed, and devoid of a tail lamp. (Incidentally, he had no head lamp either.) When I take out a push-bike, I am most careful to carry a rear lamp in my own interests; and nothing would induce me to pedal on crowded roads without this protection. Busy highways are grossly unsafe at night until the dazzle problem is solved, and even then logic demands a return to universal tail lamps, or, at any rate, to universal coloured reflex mirrors. Finally, the D.O.R.A. lighting-up times were far more sensible than the "hour after sunset" business.

Dimming Head Lamps.

I DO not know what motor cyclists as a class think of the dim-and-switch-off business. It is obviously at best nothing more than a temporary compromise until the dazzle bother meets with a sensible solution. At present it can hardly be judged on its merits, because it is nowhere practised with consistency. Many car drivers regard the dodge as dangerous, and blaze ahead on full lamp power, probably because their side lamps are too weak to show up the road in the sudden contrast created by switching off two enormous head lamps. Others switch off or dim as they approach another vehicle, but instantly restore full lamp power if their compliment is not reciprocated. The result is that we get the most absurd oscillations between dazzle and darkness. Up comes 2,000 c.p. He suddenly dims to 2 c.p. You don't respond. He savagely turns on 2,000 c.p. once more. No human optic can instantaneously adjust itself to these terrific variations. We motor cyclists are an integral factor in the trouble, because the majority of our lamps cannot be dimmed or switched off.

The Super Cycle Car.

HISTORY repeats itself. When a particular notion makes good in the motor industry, its success creates a fresh jumping-off point for other designers, and the followers always turn out something more complicated and expensive than the original. Eve began with a figleaf, and Mrs. Ixion is now trying to wheedle the cost of a baby two-stroke out of me for her dressmaker's bill. So the sidecar devotees wondered whether the 1921 achievements of the 8 h.p. Rover would sire a fleet of four-wheeled 1922 cycle cars. The expected offspring are materialising; but most of them are going to cost nearer £300 than £200. Does the 8 h.p. Rover represent rock-bottom in its class, as the Morgan appears to do in another class?

Special Engines.

AT the last B.M.C.R.C. meeting, I heard loud words emanating from a gesticulating little knot of notabilities, and, pushing in to the fringe of the crowd, I heard various cynics accusing sundry manufacturers of racing with specially built engines alleged to have cost £500 apiece. The manufacturers were defending themselves heartily, but nobody confounded the hecklers more than W. H. Wells of the Indian wigwam. The riders were just parading for the 1,000 c.c. scratch championship. "W.H.W." bent down for a minute over the two engines entered by his firm. Then he rose to his full height and remarked defiantly, "The numbers of these two engines are

Occasional Comments.—

M 14 and M 149. They are absolutely standard in every particular. To prove this, any of you can have the engines immediately after the race at ordinary list price!" Quoth the unabashed cynics, "Ah, yes, and you will take the cams and pistons out before delivery," or words to that effect. To which the Big Chief retorted that the purchasers could take the engines out of the frames that very afternoon on the track; but the frames he would not sell, as they were admittedly special.

I think this kind of offer is a very sound advertisement, and I wonder that other firms who win speed competitions with standard stuff do not follow suit. Incidentally, such a practice might ultimately protect local club meets from providing a field day for a solitary star engine, unpurchasable for less than the National Debt, brought down by train or lorry.

A Fine Sports 'Bus.

I DO not often borrow a mount, but when a pal acquired a new Zenith-Bradshaw, I could not resist.

The hardier kind of motor cyclist is fond of asserting that genuine sports mounts are extinct, and that "Slaughtered by the Sidecar" ought to be their epitaph. Perhaps this type of rider would refuse the title of sports 'bus to a 500 c.c. machine with a 6½ bottom gear, even if it were minus a kick-starter and clutch. But personally I regard this particular Zenith model as one that fully deserves the honourable title. When I begged the loan of it, my interest centred solely around the engine. Bradshaw usually

turns out "something different," and, as one who felt disappointed that his first post-war engine was only 400 c.c., I longed to try one of his flat twins with something of a thump to it. This new engine is going to make good. It sneaks along silently at 5 m.p.h. on top, will probably do better than 60 m.p.h. all out, and accelerates like a shell from the muzzle if you lower the gear and "tread on everything," as the poet said. Best of all, you catch yourself gazing madly round for the speedometer or a milestone and the oil drip, only to remember that at last a wise man has produced a motor cycle which lubricates itself as automatically as any car. There is no valve rattle either. Up to about 25 m.p.h. the hiss of the Amac carburetter was quite distinctly audible above the exhaust and all the rotary and reciprocating noises; and I never knew before that an Amac carburetter made any noise at all. But a little road work shows that the Bradshaw engine and the Gradua gear fit each other like Charlie Chaplin and the famous Kid. It would be a sin to part them—they are made for each other; and Barnes has built a nice, little machine with beautiful steering round the engine.

The Eclipse as We Saw It.

SUNDAY night, October 16th, 1921. Ten o'clock. Papa is scraping the piston ring grooves of his baby two-stroke.

Small son (in awed tones): "Daddy, whatever's the matter with the moon?"

Daddy (after a hasty glance): "Its port side wants decarbonising."

RELICS OF OLDEN DAYS.

(Top) Beyond the Triumph rider may be seen the stone marking the spot where King James of Scotland met the English monarch to decide the boundary between the two kingdoms.

(Left) An old gateway in Rye known as the Land Gate, and dated 1360, a relic even in the days when Rye was a thriving seaport.

(Right) New Abbey ruins, a few miles from Dumfries. Both the sidecars depicted are 1921 A.J.S. models.

A Rambling Tour from the North of England, through the Heart of France to the Borders of Spain.

By "A GENTLEMAN WITH A SPANNER."

IT was during one of the celebrated wet Sundays of last summer that the idea struck us, and we decided to get to a warmer and drier climate than England for our holidays this year. The idea once started, our plans went on apace; I was able to get away for a clear three weeks, so we decided to go southwards through France in that time as far as we could.

All hands were then turned on to the machine—an A.B.C. with coachbuilt sidecar; my luggage was put on the carrier and the passenger's on a grid at the rear of the sidecar. The back of the seat was filled with our coats, while on the floor I stowed a large camera, a spare tin of petrol, and another of oil. Plenty of space was found under the seat for our spares—a magneto, two spare leaves for the rear springs, a valve, and a spare inner tube. The remainder of the space was taken up by packets of chocolate and beef lozenges, which despairing relatives thrust on us, being convinced we should be stranded at the top of the mountains. The chocolate we ate on the way from Wigan to Southampton, and the beef lozenges, I believe, were enjoyed by Sopwith's repair department on our return!

A Favourable Crossing.

The route Southampton-Le Havre was chosen for our crossing, one reason being that it is the cheapest, the other that one gains 200 miles on one's journey to the south. The sea was kind—not even a ripple—and one morning in early summer we set foot in France.

There was very little difficulty in getting away. The A.A. representative obtained petrol for us, and soon had the outfit passed by the Customs, so that within an hour of arrival we were *en route* for Rouen, where we met Bartlett. He will be remembered by all who frequented Brooklands in pre-war days. He is the agent for the French A.B.C. in Rouen, and had one there with which he had been lowering several hill-climb records. After a look-round the old town, we headed south. The roads soon improved, and we made good time to Evreux, where we spent the night, starting next morning for Tours—a run of 138 miles. We made good time; gone were the pot-holes of the day before, and over mile after mile of smooth straight road the speedometer needle hovered round about 35. Lunch was taken at Chartres, a fine old town with a perfect cathedral, which we visited.

Where Good Roads Do Exist.

Once south of the Loire we found excellent roads, and from this point onwards only about twenty miles of poor road in the next 2,000. We ran on to Limoges—through very pretty country, and saw our first indication of the approaching south, for all signs of horses disappeared, and we found oxen everywhere in their stead. The ox-carts are one of the drawbacks of the roads, they are always on their wrong side, and the only means of directing the oxen is by prodding them with a stick! The wheels of the carts, too, have large nails hammered into them, which seem to distribute themselves freely on the road, for our only punctures were due to these.

From Wigan to the Pyrenees.—

From Limoges we ambled through the Cevennes to Castres, spending a night at Aurillac on the way. All this part of France is very lovely, and we would not have hurried even if the roads had permitted, which they did not. The surface was always excellent, but the road at times is at an altitude of about 5,000ft., and hairpin bends are frequent. It is quite a common occurrence in this part of the country to have to 'drop down two or three thousand feet into a valley, and promptly climb up again. The country is very wild, the only inhabitants clustering around the few small villages. Traffic on the roads is practically non-existent; the first car we saw after Limoges was the Toulouse 'bus near Castres.

Old World Surroundings.

Carcassonne, which we reached next morning, is unique. The *Cité* dates from the fifth century, and is the most perfect example of a mediæval fortress in Europe. The French always take care of their old places, and the *Cité* looks to-day as it did in 480 A.D. Some idea of the size may be obtained from the walls, which are 1,600 yards round. At Carcassonne, too, I, as mechanic, had to get to work. I had come over with plain rubber tyres, and spent a somewhat warm afternoon changing over the back tyre with the sidecar tyre. The tread of the back tyre would, apparently, only last

a thousand miles, and I strongly recommend others to use a steel-studded tyre for their back wheels. The engine was still running perfectly, and all that was done to it was tappet adjustment. Before leaving England, the original adjustment had been scrapped and two lock nuts substituted, which were found to keep their place much better.

After two days of Carcassonne, we were tempted by the deep brown of the contours on the map to try the crossing of the Pyrenees. On leaving Carcassonne, the sunny weather was also left behind, and we started off in heavy rain, and after about twenty miles found the mountains towering above us. The road was narrow and the surface very slippery with the rain; gradients averaging about 1 in 6 enabled an easy climb to be made on second gear at about eighteen to twenty miles an hour. Considering that the whole outfit, ourselves included, weighed $7\frac{1}{2}$ cwt., we were quite pleased with the performance. The climb is about thirty miles long, although only the last seven or eight are really severe, but we found

Where French bull-fighting takes place—the arena at Arles.

The old bridge and cathedral at Limoges.

our engine at the top quite cool, and there were never signs of bottom gear being required.

We had now got to an altitude of 5,500 feet, and were in bright sunshine above the clouds. Here we had a run of some fifteen miles along the plateau to Bourg-Madame, right on the Spanish frontier. After a brief stop to photograph the kilo post and feed the bicycle, we pushed on into the mountains. A rare old climb! The road goes up to 7,000 feet, and one looks over the practically abrupt sides of the hill to see the road one has left far down below. However, our climb was rewarded: at the top of the pass I was able to slip into neutral and coast down the last ten miles to Ax.

Ax is quite a cheery little place, but pretty cold, being at an altitude of nearly 2,500 feet. It is a favourite summer resort of the people of Barcelona. This we found to our cost, as we found none there who could speak French; however, by mixing our French with a little ancient Latin, we concocted a language which seemed to be more or less understood,

From Wigan to the Pyrenees.—

Having meandered about the South of France, exploring where fancy led, we found that time was now getting on, so at last we had to head north again. The run up to Blois, passing through Clermont Farrand, was good, and Blois appeared to be a delightful old spot. Here stands one of the old Royal Châteaux of France; it is perfectly preserved, and the walls in all the rooms richly decorated. In one room only have the decorations been stripped, this being done during the revolution. From Blois we crossed our old tracks at Vendôme and headed for Caen, and found this road to be much better than the one we had come down by.

From Caen we progressed by easy stages back again to Le Havre, which we reached again after three weeks and two days: when we arrived at Southampton we learned that the weather was still

unbroken in England, but we did not regret our trip on that account, anyway!

Our total mileage worked out at 2,306 miles, and at the end the engine was pulling as well as ever. Our petrol consumption gave us an average for the whole trip of 79 m.p.g. Our only troubles were punctures, caused in every case by nails from the ox-carts; the next time I shall fit a nail-catcher.

In conclusion, I would advise anyone wanting a cheap tour to visit France. Transportation can be left entirely in the hands of the A.A. Freight charges for getting a sidecar across are by no means excessive, and, once there, living is cheap, for the hotels are always inexpensive and clean, and one is always sure of excellent food. Our bills for dinner, plus wine, room, and breakfast, averaged under 10s. each. Language, too, need be no bar; we found the magic word to be "*vin*"!

SOME NOTES ON EASY STARTING.

A Few Hints to the Novice on Starting his Engine.

NOTHING so disgusts a novice with motor cycles as the hot and exhausting efforts demanded from him when his engine becomes difficult to start; yet the cause is always traceable.

The first essential is that the engine turns freely, whether the rider is push starting or operating a kick-starter. If the engine is stiff, the magneto spark will be poor, as will be the suction on the jet. An injection of petrol will free the piston.

Intelligent Application of the Starter.

When the novice has satisfied himself that his engine is really free to turn, it must be understood that no kick-starter rotates an engine through several revolutions. An engine can only start on the firing stroke, which occupies half of a revolution. But allowing for the gearing of the kick-starter, and the fact that a tired and ignorant rider perhaps only uses part of the starter range at each dig or kick, some attempts to start up only turn the engine through one revolution; and that revolution may consist of the exhaust and inlet strokes, and not include a firing stroke at all! The next dig may include the firing stroke; but, on the other hand, the rider may wearily turn the crankshaft a little further in preparing for his next dig, and so miss the firing stroke again on his next attempt. Care is therefore needed in setting the kick-starter, so that its downward movement commences just before the compression stroke, and is continued to include the firing stroke. Equal care is needed to drop the valve early enough; otherwise pure air is sucked in, and the engine does not fire when the spark occurs.

Middle Gear for a Running Start.

Similarly in the push-and-run start, the weak user of a heavy machine cannot push his mount over several compression strokes on a high gear; in fact, his efforts will usually result in the machine stopping with the piston at the top of the compression stroke. But if his engine is properly free, and he engages the lower gear of two or the middle gear of three, he can run the machine fast enough to carry it over once or twice,

Having cleared away these elementary difficulties, we can now consider the case of an "ungummed" engine, which will not start when the kick-starter is sensibly operated, or when it is pushed along quickly.

The ignition is the commonest culprit, and in most cases the sparking plug is the faulty item. The novice often handles his carburetter rather stupidly, or uses too much oil. Both blunders accumulate carbon inside the combustion chamber, and this carbon fouls the interior insulation of the sparking plug. The weak spark generated in attempts to start the engine does not relish the leap across a wide gap at the sparking plug points, and the current may find an easier road along the film of carbon inside the hollow end of the plug. So the next step is to see that the inside of the plug is perfectly clean, and that the gap is not too wide and not too narrow.

When the plug is right, the spark may still prove unsatisfactory. In this event, the next step is to see whether the platinum points of the magneto contact breaker are breaking; possibly the rocker arm is inclined to stick in its bush, which should be cleaned and reamed out very gently by a pencil rolled out of a strip of emery paper. If the gap is correct and the break smart, see that the meeting faces of the platinum points are clean, smooth, and bright.

Carburetter Troubles.

If the source of the starting trouble has not yet been identified, the carburation must come under suspicion. It is highly improbable that the carburetter adjustment is to blame, and there is no need to fiddle about with spare jets or with the petrol level. Nor will a little tendency to "flood" do any harm, so far as starting is concerned; it is generally rather a help than otherwise. It is air leakages at the joints of the inlet pipe with which we are concerned now. They can always be countered by petrol injections or liberal flooding, but if they are caulked, these tiresome little attentions should cease to be needed. A whole catalogue of dodges for discovering air leaks will be found in the new edition of "Hints and Tips," published by the proprietors of *The Motor Cycle*. ROAD RIDER.

LUBRICATION OF TWO-STROKE ENGINES.

An Informative Study of a Vital Question.

IN connection with the lubrication of motor cycle engines there are many points of considerable interest which are frequently neglected or misunderstood. Especially is this the case with two-stroke engines, where, in addition to the usual functions, the oil is subjected to a washing action by the petrol vapour. This fact necessitates considerable care in the selection of lubricants, if the best results are to be obtained.

Choosing a Suitable Oil.

There are three classes of oils on the market, viz.: Vegetable (leading example, castor oil), mineral or hydrocarbon (mainly the heavy residues from paraffin and shale oil distillation), and compound (a blend of the above two).

The consideration that should most strongly influence our choice is that "all the main bearings of a crank case induction two-stroke are exposed to the detergent or washing action of the fuel vapour," so that no matter how well an oil may resist high temperatures or maintain the sphericity of its particles under great pressure, if it is liable to be washed or carried away by the fuel, its value vanishes. Presuming other qualities to be equal, the criterion of judgment then becomes the degree of solubility of the oil in the fuel vapour. Viewed from this standpoint, vegetable oils carry the day as against mineral. Were it not for the fact that some engines are still lubricated by the petrol system, one could recommend vegetable oils always. With this system they are difficult to use in practice, as they separate out in the tank and lead to carburettor troubles. The requirements are best met by a compound oil, which dissolves just sufficiently in the fuel to pass through the jet regularly, but separates out rapidly under subsequent atomisation. Vegetable oils are imperative where paraffin is used.

Mineral oils, being of the same nature as the fuel itself, combine with it, and are washed away far more rapidly. Granted that this easier and more complete solubility renders them the most convenient to use with a petrol system, and avoids separating-out trouble, this very fact militates against their lubricating value, inasmuch as they do not separate out fast enough in the induction pipes and crank case, and are liable to vaporise against the hot piston top, thus forming part of the explosive charge. For four-stroke engines mineral oils are quite in place.

Where Oil is Wanted.

Having fixed upon our oil, let us consider separately the four places where it is called for: (1.) The main journal bearings. (2.) The big end. (3.) The small end. (4.) The piston.

With all these, we find again that "crank case induction" is the devil amongst the tailors, and forms a disagreeably complicating factor. Whether we deliver the oil mixed with the fuel through the carburettor or direct to the bearings in its natural state, crank case induction tends to suck them dry. In direct-feed systems, if one increases the feed to counteract this, the oil consumption becomes alarmingly heavy; if one reduces, the consequent dry bearings wear rapidly.

The Main Journals.

The foregoing drives us to the conclusion that roller bearings, despite their rattling and compression losing tendencies, are the most suitable for the above duty. With these a further bush or washer is necessary to hold compression. I have often thought that a reversal of the usual system of placing the phosphor bronze bush on the outside would be beneficial, as, were the roller bearing to occupy this position, it would be practically free from crank case suction, and its useful life would be enormously lengthened. This would also seem to emphasise the advantage of single bearing engines with one side entirely closed as the Scott, Velocette, and Sun.

Big End Bearings.

Again, we are given a bearing subjected to a most irregular thrust, which is continuously whirled through one of the most cleansing vapours known to science. Roller bearings, from the fact that they will run practically denuded of lubricant, are again the only answer to the problem of big end lubrication under conditions of present-day design. Their lubrication might be further improved by receiving oil through a hollow connecting rod as a further extension of the system indicated below.

These are, as at present constructed, by far the most difficult to lubricate. I am under the impression that they very rarely do get lubricated, but are dry for nine-tenths of their life, which life is altogether disproportionate to the life of four-stroke bearings and pins. I have taken gudgeon pins out of two-stroke engines which I know have never run really hot, and have found them blue and scaled, the bush

Working parts of a two-stroke single cylinder engine. Although simple in construction and having but few parts, it is essential that adequate supplies of oil be led to the various points indicated.

Lubrication of Two-stroke Engines—

having a peculiar rough feel inside altogether unlike a worn bush which has been well lubricated. A great deal of the much-discussed two-stroke rattle is, I am convinced, owing to this state of dryness.

The universal adoption of gudgeon pins fixed in the connecting rod and oscillating in the piston itself would improve matters, as this type receives oil direct on to the bearing from the cylinder walls.

Oiling the Piston.

Piston lubrication, where this is directly through the cylinder walls, is fairly satisfactory. It is difficult to assist, as in four-stroke practice, with extra rings, grooves, etc., to distribute the oil, as, the piston functioning also as a slide valve, there is risk of forming communications between the ports.

By slight modification to existing design, it might be possible to arrange for oil to be mechanically pumped to a hole in the cylinder wall, which would remain always covered by the piston, lead being made by means of grooves or slots to a hollow gudgeon or connecting rod through which the oil would be forced, thus lubricating the small and big end bearing. The surplus from the cylinder walls could be led to the side journals, as in present practice. It might be possible to put a groove round the cylinder itself, missing the ports.

Quantity Regulation: Load the Deciding Factor.

Having arranged that the oil actually gets where one wants it, there remains the problem of its correct proportioning for the load. This brings us to a consideration of interconnection of throttle and lubrication control (graduation by engine speed—whereby, as engine speed rises, supply is increased—obviously fails, for high speed does not necessarily imply big load).

Present-day Systems.

These have, upon the majority of machines, not advanced far beyond the stage of leaving it to the discretion of the rider either to flood or to starve his engine:

We have to consider three systems:

- Petrol.
- Direct drip feed.
- Positive mechanical feed.

Petrol.

In this system the lubricant is mixed with the fuel in the tank, passing through the carburetter, separating out when inside the crank case. The proportion of oil to fuel varies between one to ten and one to sixteen. The governing rule should be load carried and average speed it is intended to maintain; as these two rise, so the proportion of oil should increase. For continuous town work the smallest proportion possible if avoidance of four-stroking is

(Left) A plain bearing in which the journal (shaft) rotates in a bush. Contact between the large frictional areas is prevented by "floating" the shaft upon an oil film. (Right) Roller bearings require less lubrication, as contact between the parts is in the nature of rolling lines instead of rubbing surfaces.

desired. It may strike one as peculiar that all the engines which use the system successfully are of the type which have their induction pipes adjacent to the exhaust, as the Triumph, Connaught, or Royal Enfield. The explanation is that the extra heat thus attained for the mixture separates out the lighter fraction of the mixed fuel more quickly—a mild cracking process, in fact. Engines of this type will all four-stroke until warm, owing to this cause.

Drip Feed.

This system, as far as the tank and drip mechanism is concerned, is identical with four-stroke practice. Oil is fed by pressure, gravity, or suction-controlled drip to the crank case or any part of the cylinder below the highest point reached by the bottom of the piston. The higher this point is taken, the suction upon the drip is shorter in its dwell but more sudden and violent in its action. It is not quite similar in its effect as feeding oil to the inlet pipe. But wherever it is placed, one cannot get rid of an inherent and fatal defect—the fact that crank case suction does not decrease proportionately with the closing of the throttle, but has the effect of increasing if the road speed be maintained, as in light and downhill running. If the throttle barrel be at all a good fit, it is possible, whilst obtaining a braking effect, to exercise the whole of the crank case suction upon the drip with fatal four-stroking results. When the throttle is again opened to meet the call of a heavy load, the rate of feed returns to the minimum for which it was set; in consequence, unless what amounts to over-oiling for 80% of the running time is practised, there is danger of starving the engine when it is worked hard during the other 20%, unless one is prepared to mess with the oil control all the time. Even then one cannot adjust the feed against the ever-varying suction.

Interconnection with throttle might assist, but these drips have a setting below which they work very erratically or not at all. Temperature and varying thicknesses of oil also affect them enormously.

Mechanical.

Every indication points to this being the ultimate system. At the moment of writing there have only been submitted to practical test in the hand of the general riding public two machines embodying it—the Precision and the Velocette.

For the thousands of machines at present in the hands of owners, the new Best and Lloyd mechanical pump should be a very great boon. I had experience some eighteen months ago upon an early experimental model, and was struck with its economy. It seems to attain the much desired consummation: it is positive, it is almost throttle controlled, it is unaffected by crank case suction, and stops and starts automatically.

A suggested lubrication scheme for a two-stroke engine. Oil is fed by mechanical pump to a drilled gudgeon pin which is secured in the connecting rod end. An oil-way leads directly to the roller bearing big end, while the surplus lubricant from the cylinder walls is caught and led by ducts to the main bearing compression retaining bushes. The main-shaft roller bearings receive oil from the crank case.

Lubrication of Two-stroke Engines.—

On no other type of engine is mechanical lubrication so essential as on a two-stroke, as it is so intimately bound up with carburation.

Possibilities.

A possibly simple system might be the combination of petrol and mechanical, in which the oil could be pumped to the float chamber to mix there with the fuel. It would give all the advantages of the petrol system without its most serious disadvantages.

An alternative might be to feed the oil through the carburettor from the air side of the throttle, where it would not be exposed to the inverse action of crank case suction. The feed could be controlled by means similar to the fuel control on the B. and B. needle valve carburettor. In types of carburettors having separate gas-making arrangements, as the Claudel, Cox-Atmos, and single-lever Amac, in which

high air speed is used, this should be easy, as suction would have to be relied upon to bring the oil to the carburettor, for, were it fed by gravity, the flow would not cease automatically as soon as the machine was stopped.

To Reduce Running Costs.

In view of the fact that there are thousands of two-strokes running to the complete satisfaction of their owners, my strictures on present-day lubrication may seem to be a call to paint the lily; but, in considering that we are a much poorer nation than we were, and that the bulk of the ownership of motor cycles has passed from the *jeunesse dorée* to the higher grade workman and lower middle class family man, may I make this plea to manufacturers to design and produce more for low running costs than for the winning of cups and medals by climbing stone staircases?

V. C. RAYNER.

Eighty Miles an Hour up 1 in 15.

The Power Output Required.

NOT long ago, as reported in *The Motor Cycle*, George Dance rode a $3\frac{1}{2}$ h.p. Sunbeam up Penkridge Bank, a hill on Cannock Chase, not far from Rugeley, at about 80 m.p.h.

This was a notable performance, although Penkridge Bank is not a steep hill, for it is not so very long ago that 80 m.p.h. was just exceeded by a motor cycle with an engine under 500 c.c. even on the level. This was, I believe, when H. R. Davies covered a flying kilometre on a $2\frac{3}{4}$ h.p. A.J.S. on October 19th, 1920, and won the Godfrey Cup for being the first to attain a speed of 80 m.p.h. on a machine having an engine capacity not exceeding 350 c.c.

Now we speak of the Sunbeam ridden by Dance as being $3\frac{1}{2}$ h.p., but, in view of the power developed by present-day motor cycle engines, I think that it is quite time we dropped the use of the nominal horse-power rating and called an engine by its size or by some rating which at least gave an approximation of the power that can be attained.

It is not, of course, every 500 c.c. machine that will equal the power of Dance's Sunbeam, and possibly it is not desirable that it should be so. Longer life will result from a more moderate power output.

The Probable Horse-power.

A few simple calculations will show with a fair degree of accuracy the horse-power developed by the $3\frac{1}{2}$ h.p. (I use the term under protest) Sunbeam on this occasion. Penkridge Bank is said to have a gradient of 1 in 15, and, for the sake of example, I estimate the weight of Dance and his machine at 400 lb., and 80 m.p.h. = $117\frac{1}{3}$ feet per second. Therefore the power required for raising the weight must be

$$\frac{400 \times 117\frac{1}{3}}{15 \times 550} = \frac{256}{45} = 5.68 \text{ h.p.}$$

Not very excessive certainly, but the power required to raise the weight is only a small part of the whole, and there is more to come.

Air-resistance increases approximately with the square of the speed, and, consequently, the power required to overcome it varies with the cube of the

speed, for, not only is the resistance greater as the speed rises, but it is overcome much more quickly.

The Eiffel constant for air resistance is .003, but this is for flat surfaces, and the constant for a motor cyclist on his machine is probably much less, and I will take it as .002 and estimate the surface exposed to air resistance as 5 sq. ft. The formula then is $R = .002 A v^2$, where R = air resistance, A = area of surface, and v^2 = velocity in m.p.h., and we get

$$R = \frac{2 \times 5 \times 80 \times 80}{1,000} = 64 \text{ lb.,}$$

and the horse-power will be

$$\frac{64 \times 117\frac{1}{3}}{550} = 13.65 \text{ h.p.}$$

(550 being the constant for horse-power, i.e., 550 ft.-lb. per second). The horse-power, therefore, which is required to overcome the air resistance is more than double that needed for lifting purposes.

One thing more is required before we can get at the total horse-power, and that is the tractive resistance. Penkridge Bank having a good surface will have a low resistance, say 50 lb. per ton, which gives the required h.p. as

$$\frac{50 \times 400 \times 117\frac{1}{3}}{2,240 \times 55} = \frac{40}{21} = 1.9 \text{ h.p.}$$

And the total is $5.68 + 13.65 + 1.9 = 21.23$ h.p.—a very respectable power output for a " $3\frac{1}{2}$ h.p." engine.

I do not suggest that the Sunbeam should be called the $21\frac{1}{4}$ h.p. Sunbeam, nor even the 10-30 h.p. Sunbeam, but that it should be given the horse-power at a moderate number of "revs." (say, 2,000 r.p.m.) as its rating, or alternatively that it should be called by its capacity or the capacity of its class in A.C.U. competitions, e.g., the 500 c.c. Sunbeam. PENOLVER.

THE 200 MILE RACE FOR LIGHT CARS.

To-morrow's issue of our parent journal "The Autocar" contains a graphic illustrated description of last Saturday's great 200 mile race for small cars. This event approximates to the 500 mile race for motor cycles held in July last.

Improvements to the Low Lighting Set.

Modifications to the Generator, now marketed as with Lamp Complete.

CONSIDERABLE improvement has been made in the design of the Low motor cycle lamp set, which includes the Low generator. This latter, though the principle of working is the same as when last described in *The Motor Cycle*, is far more symmetrical in design, and its weight has been reduced to 12 oz. The illustration gives a general idea of the neatness of the set, while the sectional drawing shows the generator.

Sectional view of the generator, showing the water valve which is automatically closed as the gas pressure increases.

The carbide is held in an inner container shaped rather like a carbide tin, and refills can be carried all ready for use on the machine. When the lid has been removed the water valve is turned on by unscrewing the milled nut on the top and pressing down the valve with the finger. The moment water dripping over the cone-shaped water distributor in the container attacks the carbide, gas is formed, but when the pressure exceeds a certain determined figure the water valve is automatically sealed, and any egress of gas is prevented by the rubber non-return valve at the top of the needle valve stem. The container is now ready for use and cannot leak, but in the case of any excessive pressure being generated, this is got rid of through the safety valve. On opening the gas control valve, gas, of course, flows through the burner, and when the pressure inside the generator falls, the water valve again opens and more gas is generated. The internal carbide container has a porous lining, which absorbs the gas contained in the reservoir.

Lamp Bracket as Gas Passage.

It is worthy of note that no rubber tube is used between the lamp and generator, a brass pipe being substituted; a union for a tail light is also provided.

On leaving the generator the gas passes through the hollow lamp bracket, then through the transverse tubular member,

Outwardly the Low lighting set differs little from a conventional acetylene lamp.

in which the filter is situated, and from there direct to the burner. This transverse member is provided with a screw at both ends, and when removed the filter can be cleaned or replaced. This equipment is marketed (at £4 10s. for the outfit) by the Low Generator and Engineering Co., Ltd., Alperton, Middlesex, and should appeal to those who look askance at the high price of electric lighting sets. By the Low system the troubles usually associated with acetylene when used intermittently are negligible.

BELT GRIP IN WET WEATHER.

Erusa—a New and Very Satisfactory Preparation for Preventing Belt Slip.

THE only disadvantage of chain-cum-belt and all-belt transmission is the tendency to slip in wet weather. But for this, all-chain drive would not have taken first place in the favour of motor cyclists generally. The present writer owns a big twin family sidecar with chain-cum-belt transmission, which has given every satisfaction for the past eighteen months; but during the wet weather of last winter average speeds on long journeys fell short of the planned schedule solely on account of slight belt slip.

Outweighing the Disadvantages.

The advantages of final belt drive, however, have always outweighed the disadvantages, for which reason the machine has been retained; but, after last winter's experience, it was decided to try the various preparations for preventing slip, and for weeks several samples of these have reposed on the writer's table awaiting the wonderfully fine weather to break. It was finally decided, however, to try the preparations under artificial conditions.

By tightening the primary chain, the belt was slacked off until it was impossible to get under way without extraneous assistance, thus creating the trouble which many sidecarists experience after a machine has been standing for some

time at the kerb in the rain, or has passed over a stretch of rain-flooded Tarmac.

The preparation to be tested is known as Erusa, and is a liquid very like treacle, which, it is intended, should be applied to the sides of the belt in little dabs about six inches apart. I have always

run the belt moderately slack (permitted on my machine by the somewhat long pulley centres), and have acquired the habit of carelessly dropping in the clutch in consequence.

Positive as a Chain.

After dressing the belt as per directions I started up the engine, very doubtful that the application of the liquid could make up for the sagging belt. Greatly to my surprise, on letting in the clutch, I stopped my engine, showing that the drive was more positive than I had ever had it. More warily the next time, I gradually applied the clutch, and, with full load of three persons, got under way in a manner that suggested chain transmission.

After readjusting the front chain, and so tightening the belt a little, I took the outfit to a watersplash, and traversed it without sign of slip in the transmission.

Without doubt this Erusa is a useful preparation to all who use belt drive, and apparently lasts about three weeks before re-dressing is necessary. The sample will soon be used up, for other members of *The Motor Cycle* staff are trying it, and finding it good now that the wet weather is here. The makers of Erusa are Messrs. Thomas and Bishop, Ltd., 28, County Chambers, Corporation Street, Birmingham.

VEDETTE.

SMALL CARS.

Motor cyclists interested in small cars should read "The Autocar," the parent journal of "The Motor Cycle."

Light, medium, and large cars are adequately covered in its pages. No artificial division of light cars from other types is attempted, or, indeed, is necessary, since the principles of design are identical and the interests of users, whether concerning questions of upkeep, taxation, roads, service or future development, are undivided and common to all.

Thus, "The Autocar"—the pioneer and the largest of all motor journals—forms the only complete record of the automobile movement, by embracing the interests of motorists in general.

Number-plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

Sir Harold Bowden.

Sir Harold Bowden, Bart., head of the Raleigh Cycle Co., Ltd., has been elected president of the British Cycle and Motor Cycle Manufacturers' Union.

Oil in Western Australia.

The discovery of distinct traces of mineral oil in the Kimberley district of Western Australia is reported. Leases covering 100,000 square miles have already been applied for.

Belgian Grand Prix in 1922.

We learn that the Belgian Motor Cycle Federation has decided to organise an International Grand Prix for 1922. There will be two classes, 350 c.c. and 500 c.c., the latter class having to cover at least 450 kilometres.

Current .. Chat ..

£10 Reward.

A reward of £10 is offered for the recovery of a stolen 6 h.p. Enfield two-seated sidecar outfit—registered number XA 5,502, engine number 64,531. The machine was stolen while the owner and his family were taking tea at the top of a roadside bank near Hayes.

The Compulsory Cut-out?

From the *Macclesfield Courier and Herald*: Edward Clifford Pegg, grocer, Stockport, was summoned for riding a motor cycle at Poynton on September 15th without a proper cut-out or expansion chamber. Sergeant McFall said he was in London Road, and heard the machine making a very excessive noise. Defendant said the "muffles" of his machine blew off, and he put it in his pocket. Fined ten shillings.

That Rear Number Plate.

In the case of an obscured rear number plate at South Shields recently, a rather unusual point occurred. The defendants were a father and son, the latter on the pillion and obscuring the rear numbers. The alleged offence occurred after dark; and, the defending solicitor successfully contended, as only the front number plate was legally required to be illuminated, the covering of the back one was immaterial. The case was dismissed.

Special Features.

FROM WIGAN TO THE PYRENEES.
TWO-STROKE LUBRICATION.

1922 MODELS.

Sidecar Chars-a-bancs for Police.

Powerful motor cycles, with sidecars able to carry four policemen, if necessary, are now part of the equipment of all the Paris police stations. It is anticipated that their presence in the streets will act as a deterrent to would-be infringers of the speed limit. Then, again, the perpetrators of many armed robberies have recently escaped by using motor cars, and there has been no means until now of overtaking them. The sidecars will be used also in transporting victims of street accidents to the hospitals.—*Reuter*.

Important Forthcoming Trial.

Excepting the Christmas holiday events, the West Midland open trial on Saturday, November 5th, will be the last big competition of the year, and should attract a good entry. There are two special awards: a private owner's prize presented by Norton Motors, Ltd., and a team prize presented by *The Motor Cycle*. The route will lie, in the morning circuit, east of Stewponey, and include Gravel Pit and Beacon Hills; and in the afternoon chiefly to the west in the Cleobury and Ludlow districts. Entries close tomorrow. Mr. P. W. Bischoff, Sunhoney, Richmond Road, Wolverhampton, is the trials secretary.

THE UTILITY SIDECAR.

(Left) Mr. Turk, of Brighton, is to be congratulated on his bright idea of advertising a brand of metal polish by making the body of his Zenith sidecar a replica of the speciality in which he deals. (Right) A juvenile member of the United Dairies Calf Club of Loughborough, taking home the calf after a "draw" at the Cattle Market. The outfit is a B.S.A.

Road Tests of New Models.

*The 2½ H.P.
SPRING-FRAME
P.V.*

SPECIFICATION.

ENGINE: Villiers two-stroke,
70×70 mm. (269 c.c.)

LUBRICATION: Drip feed.

MAGNETO: Villiers flywheel.

WHEELS: 26×2½ in.

CARBURETTOR: Amactwo-lever.

GEAR BOX: Burman two-speed.

TRANSMISSION: ½ in. chain and
¾ in. bell.

FRAME: Spring.

MAKERS: P.V. Motor Cycles,
Ltd., Perry Vale, Forest Hill,
London, S.E.23.

THE P.V. was a pioneer amongst lightweight spring frames, and the detail improvements which have been made were incorporated more to facilitate the adjustment and long wearing qualities of the mechanism than to increase its efficiency.

The construction of the springing system, which the makers claim eliminates all lateral play, is exceptionally simple. The rear wheel is carried in a fork which is pivoted at the rear fork end lugs of the chain stays; this fork terminates in a peg which passes through a slot in the saddle tube and engages with a cylindrical fibre block. (The strength of the saddle tube is considerably reduced, but this is compensated by the use of heavier gauge tubing and lugs.) A coil spring is located above and below the fibre block, the upper one acting as a recoil spring.

Accessibility of Main Spring.

The main spring can be removed and another fitted with ease, merely by taking out the plug at the bottom of the saddle pillar tube.

The machine which we were to take upon test was equipped with a 2½ h.p. Villiers engine.

A preliminary inspection of the controls and equipment completed, which latter we would say was more adequate than that supplied with many new machines, the engine was started, and, engaging the clutch, the machine took up the drive sweetly, and rapidly accelerated on but a small movement of the throttle.

Although scorned by a number of "big twin" speedmen, there are many points in favour of the two-stroke lightweight, notably smoothness of torque and ease and simplicity of control.

Value of a Good Clutch.

Negotiating traffic in the South-west of London without constantly changing down necessitates much work for the clutch, and if it is sensitive to the slightest movement of the finger, as we found was the case with the Burman, much time and inconvenience are saved. So far as the two-speed box is concerned, when once out of the dense traffic, the lower gear may be regarded as a superfluous luxury.

Happy to leave the London streets well in the rear, the long strip of road from the Metropolis towards

Road Tests of New Models.—

Guildford and the coast instinctively encouraged a wider throttle opening. A "B. and B." carburetter is fitted, and with both air and throttle barrels wide open the machine had a remarkable turn of speed for its engine capacity.

When one has traversed a bad piece of road many times, a definite channel, where the most violent road

The 2½ h.p. spring frame P.V., one of the most comfortable lightweights on the road

shocks can be avoided, is instinctively chosen. The ability to disregard this chosen route without the anticipated jolting in the saddle most effectively demonstrates the efficiency of a spring frame. This was our experience with the P.V. The rear springing is most effective, whilst it is not, as in many designs, too sensitive. It has the added merit of being quite simple.

petrol consumption was in the neighbourhood of 70 to 80 m.p.g.

Other models manufactured by P.V. Motor Cycles, Ltd., and all embodying the same springing system, are a special ladies' model with a cut-away tank, a 2¾ h.p. J.A.P.-engined model, and a 5-6 h.p. J.A.P.-engined dual-purpose mount, equipped with a P.V. spring frame and a sidecar.

VIEWING THE ECLIPSE.

The night of the recent eclipse of the moon was ideal for a moonlight run by motor cycle, and the above illustration, taken by flashlight, shows Basingstoke motor cyclists who took advantage of a run out in the clearer country air to observe the phenomenon.

MR. JAMES BOWEN propounds a somewhat unusual method of air-cooling the cylinder head. His cylinder is apparently of cast iron, innocent of any finning on the head, to which a copper washer is attached. This washer is ribbed and tongued in such a fashion that all the air currents concentrate

confined, are free to slide in the barrel, but are prevented by keys or feathers from rotating. The two outer discs or washers are free to rotate when a load is put upon their respective shanks, projecting from the ends of the barrel. As the inner washers cannot rotate, the coiled springs are compressed. The intention is evidently to obtain a cam action upon both ends of the springs, and so to get a big spring action in return for a very limited motion of the levers. I find it difficult to believe that the device would work smoothly or prove durable.

and radii are so arranged that the connecting rod can be threaded into position over a one-piece crankshaft, and yet have no more than the correct fraction of side play when it arrives on the crank pin. No cheek plates are needed, and the rollers are inserted *via* a recess machined in the opposite crank cheek. This recess is afterwards filled by a locking plate, which abuts against a flange, and is finally secured by two locking screws and a wire.

James Bowen's cooling device. No. 160,926. 7/4/21.

towards one corner. The washer is enclosed in a hollow and perforated aluminium air box, through which a current of air is induced by means of a special pipe coupled to an ejector nozzle operated by the exhaust gases. This system might conceivably be inferior to standard practice at high road speeds, but should improve the cooling when the engine is pulling a heavy load on a very low gear.

John Arthur's springing device. No. 161,054. 30/3/21

Coil Springs.

The spring shown in the accompanying sketch lends itself to a variety of uses, and can easily be adapted to the front forks or rear frame of a motor cycle. The two "oblique washers," between which the coiled springs are

Tyler and Simpson's roller bearing. No. 159,276. 20/2/21.

Big End Assembling.

Mr. Granville Bradshaw, like most small men, is of an extremely jovial disposition. His best friends say that nothing ever depresses him except the announcement of a new patent for assembling a roller bearing big end.

He is responsible for the pioneer patent in a long list, and his original specification was not drafted widely enough to give him what every inventor dreams of—a master patent over some article which is in common use. So a cloud will once more pass over his features when he studies the Tyler Apparatus Co.'s roller bearing big end shown herewith. By careful calculation the various angles, chamfers,

A French Motor Wheel.

Messieurs Burlat and Renaudin reside at Impasse St. Alban in the city of Lyons. I sincerely hope there is nothing prophetic about the first word of their postal address, but I have lived to see many motor wheels invented and few succeed. Their wheel, so to speak, is

Burlat and Renaudin's motor wheel. No. 139,767. 10/3/21.

mostly hub, for the power unit, etc., are carried inside the hub. A small crankshaft pinion drives a much larger pinion, which in turn operates an enormous clock spring. This clock spring "stretches at the explosion, and relaxes during the other three movements," thus providing a practically constant torque! (What further need have we of multi-cylinder engines?) Anyhow, the drive, thus smoothed out, finally arrives at internal teeth cut on the inside of the hub. The hub and wheel are centred by rollers and suitable tracks. The motor is prevented from rotating round the fixed wheel spindle "by the rigidity of the mudguard," assisted by a special strut.

Recent Patents.—

Simplicity in Carburetter Design.

Mr. E. R. Turner's motor cycle carburetter is extremely simple, and admits of very rapid tuning. The first element of novelty is to be noted in the petrol inlet to the float chamber, where the almost universal needle valve is scrapped in favour of a spring ball, opened by a guide spindle, which carries the weight of the float when the chamber empties. The spraying chamber consists of a straight through tube, in the lower side of which two jets are drilled, and rendered adjustable by means of threaded needles.

Turner's
carburetter.
No. 150,891.
16/4/20.

The jet nearest the engine is the pilot, and the base of the throttle is shaped to concentrate a fierce depression about this jet. No extra air is provided. Riders who have expended much time in trying to obtain power, economy, and even acceleration from vaporisers equipped with three jets and three choke tubes will wonder whether Mr Turner has not put up with a little crudity in his desire to evolve a really simple one-lever carburetter.

The Question of Forks.

For some unknown reason Mr. W. G. Bell nourishes a violent objection to the ordinary steering fork, which is certainly shared by the designers of the Ner-a-car and by those responsible for some now obsolete models of the James and Zenith motor bicycles. His specification contains hints which suggest that he is contemplating a tricar of the two-wheel astern type. However that may be, the two sketches indicate how he thinks the steering of such a vehicle ought to be arranged. May he prove successful in convincing the general public.

Bell's steering device. No. 159,633. 7/3/21.

Rear Springing.

Mr. A. J. Biggs's spring frame is of the type which employs a single leaf spring to restrain the oscillations of a hinged rear frame, and his specification rather implies that he has thoughts of

Biggs's spring frame.
No. 159,412. 3/3/21.

marketing it as a conversion set for springing existing rigid frames. It embodies a bell crank and shackle beneath the saddle-pillar

Effortless Gear Changing.

Of course, I cannot say how Mr. L. E. Fowler's gear-shifting mechanism works in practice, but it sounds like one of those beautiful dreams which never come true. The rider swears off the actual labour of gear changing for the rest of his life, just as a toper swears off beer when the Salvation Army gets hold of him. On starting out with bottom gear engaged, he puts the gear

Fowler's gear change. No. 150,070.
27/7/20.

lever in the second gear notch. Nothing happens at the moment. But when the rider considers the time-opportune for a change-up, he momentarily depresses his clutch pedal. No sound is heard, but the engine reduces its revolutions, and the machine increases its speed. A

similar manoeuvre translates him on to top gear. Top once reached, he puts his gear lever in notch 2—notch 1 if he is competing in a freak trial. Top gear remains engaged, but the lower gear may be instantly obtained at any moment simply by the merest tickle of the clutch pedal.

This miracle is performed as follows: The gear in engagement is locked by a trigger, which can only be freed by a lever connected to the clutch pedal. The gear lever cannot unlock this trigger, and movement of the gear lever from one notch to another, therefore, effects no gear change provided the clutch pedal is not touched. But the gear lever connections include a spring box, and the movement of the gear lever compresses one of two powerful springs—one for "up," the other for "down." The instant the clutch pedal is depressed, the locking trigger is freed, and the compressed spring pulls the selected gear into action.

A Fork Design.

Mr. W. A. Bruce's springing device is applicable to either forks or a saddle carrier. The fork stem is attached to the steering stem at two points. The lower attachment is a pair of links, while the upper attachment is a trunnion

Bruce's spring
fork. No. 158,639.
7/2/21

mounted at the apex of a rigidly braced triangle. Main and rebound springs are fitted above and below this trunnion.

Frame Springing.

Mr. A. Alltree, who has designed many motor cycle gear boxes, is now turning his attention to spring frames. The sketch is really self-explanatory. When the rear wheel passes over a bump, the pivoted chain stays swing upwards, and the pivoted down stays telescope. These actions are resisted by the opposed pressure of the thin ends of the two leaf springs shown. The leaf springs are held in register by any form of clip or pin which does not prevent them from sliding over each other, and may be encased in a metal or leather sheath. The design is light, inexpensive, and efficient.

Alltree's springing
arrangement. No.
159,658. 10/3/21.

How Spring-wheeled Sidecars may Ease Driving Strain and Shocks to the Motor Cycle Frame.

IN a recent issue, "Wharfedale" wrote at some length on the subject of sidecar connections and evinced a marked leaning towards the advocacy of a certain amount of flexibility between the sidecar and its propelling attachment.

The present writer is also in agreement with that idea, and has long maintained in his own immediate circle that a semi-flexibly connected sidecar, or a sidecar with spring wheel, would take away the majority of those unpleasant side shocks which mar sidecar driving wherever the roads tend to roughness. As an assistance in cornering, moreover, an attachment which permits the motor cycle to make slight departures from the vertical, provided its alignment is unimpaired on a straight road, should be advantageous. This question of facility in cornering was indeed of special moment, for most of the writer's mileage is accomplished with nothing more than a small bag and a photographic outfit in the sidecar to act as ballast.

Choice fell upon a Henderson spring frame model for attachment to a Scott machine, and after having the sidecar fitted at the works of Henderson Motors, Ltd., at Sheffield, it was run for some 500 miles, when delivery of a 1921 $4\frac{1}{4}$ h.p. B.S.A. was obtained, and with new connections promptly supplied the sidecar was transferred.

On the Scott machine, perhaps in part owing to the long connections up to the head lug of the machine and also to the slight inherent "whippiness" of the Scott frame, the steering with a passenger was rather heavy, but ridden empty the freedom from shocks transmitted from the sidecar wheel was remarkable, and the machine steered and felt almost as unfettered as a solo machine. The same remarks apply to its use on the B.S.A., only the steering is much better.

With this type of sidecar it becomes very essential to line up carefully and with a distinct *outward* lean of the cycle as the weight of the passenger naturally depresses the spring of the floating axle, but an adjustment is provided for varying weights. For those who travel chiefly with light loads such a sidecar is admirable. The working of the floating axle is easily noted when driving, and it is obviously saving chassis and frame from all major shocks. Incidentally, the opinion of "expert passengers" is that the comfort of this Henderson body illustrated is unsurpassed. H.S.

Swinging spring-controlled axle of the Sheffield-Henderson sidecar. Adjustment is effected by extending the leaf spring.

Graceful body lines; comfort and luggage capacity are also features.

A SWISS MAGNETO.

The Scintilla, a Simple High-tension Machine Embodying Rotating Magnets and a Stationary Winding.

THE Scintilla magneto, which is not as yet well known in this country, is an interesting piece of mechanism, as it works on a principle which is quite different from that employed in the average magneto machine.

Its performances on motor bicycles on the Continent have been remarkably good. For instance, practically all the Moto-sacoches which did so well in this year's International Six Days Trial were equipped with it, as were also two New Imperials. The magneto itself is of Swiss manufacture, and is made at Soleure.

Non-rotating Contact Breaker.

The contact breaker of all models is interchangeable and it does not rotate; the component parts are very robust. A bayonet fastening allows the contact

The Scintilla magneto for twin-cylinder motor cycles.

breaker to be instantly removed for adjustment, and the platinum points may be inspected by removing a small aluminium cover held by spring clips, while the end plate carrying the spark advance lever is held into position by a central screw, which, if loosened, allows the lever to be placed in eight different positions; a powerful spring returns the contact breaker to its retarded position.

Unlike magnetos of the rotating armature type, the windings do not rotate between the magnets, and even the usual type of polar inductor layout is substituted by a rotating magnet, thus dispensing with the more conventional rotor revolving between the poles of a stationary horseshoe magnet; the

armature windings are carried above the rotating magnet in the case of the single-cylinder pattern. The chief differences between the single-cylinder pattern and that suitable for twin-cylinder motor bicycles are in the contact breaker and the distributor. The type for twin-cylinder motor cycles has a slip ring and two carbon brushes in each brush holder, one of which collects the current from the armature, and the other transfers it through the segment on the slip ring to the sparking plug.

The revolving magnet with laminated pole shoes.

With the single-cylinder type the high-tension current passes direct to the plug terminal, and no slip ring is employed, and there are thus no sliding contacts or air gaps in the circuits.

Cut-out Switches as Standard.

Every Scintilla magneto is provided with an earth terminal for the purpose of switching off the magneto: in the case of twin-cylinder models this is situated on the driving side, and in the case of single-cylinder models it is placed adjacent to the high-tension terminal. The magnetos are beautifully finished, while the working parts are of robust construction. They are handled in Great Britain by Scintilla Magnetos, Ltd., Trafalgar House, Waterloo Place, London, S.W.1.

Details of the twin-cylinder magneto, showing the cover, twin brush holder, and contact breaker.

A Dynamo with a Mechanical Charging Switch.

New Smith Generator with Centrifugal Cut-out.

THE accompanying sketch shows the general arrangement of the commutator and the four brushes, which are held in pairs on the new Smith lighting dynamo which will be seen at the Olympia Motor Cycle Show. The automatic cut-out is a most novel feature, since it is controlled entirely by centrifugal action. The armature shaft is drilled, and inside

accommodates a small push-rod, which, at one end, comes in contact with a rocker arm, and at the other with a flat on a cross spindle, which carries the governing ring. This ring lies at an angle of approximately 45° when the armature is stationary, but when the speed of this shaft reaches 950 r.p.m. the ring swings until it is at right angles to the arma-

ture, and in consequence the full diameter of the governor spindle abuts on the end of the push rod, and so forces it outwardly and operates the rocker arm, making contact between the studs at the top of the casting and joining up the charging circuit. This device cuts out again when the armature speed drops below 950 r.p.m.

Details of the Smith dynamo, showing commutator, lamp and dimming switch, and automatic switch gear

Which is the World's Best Solo Machine?

Should Value for Money be Considered? Fascinating Belt Drive.

DESPITE the fact that almost invariably a proud owner's present mount is, in his opinion, undoubtedly the world's best machine, some very interesting views have arisen from our readers' efforts to decide the premier solo motor cycle.

In the letter from Mr. A. Arnold, initiating the discussion, the $3\frac{1}{2}$ h.p. Sunbeam was mentioned, and since then the following names have been put forward by various enthusiasts: $3\frac{1}{2}$ h.p. Rudge, $3\frac{1}{2}$ h.p. Lea-Francis, 4 h.p. Triumph (twice), Scott, Stanger, $3\frac{1}{2}$ h.p. Norton (twice), and the $3\frac{1}{2}$ h.p. Sunbeam (for the second time).

This week brings a further large batch of letters and several additional aspirants to the title.

Power-weight ratios, according to "Otazeningh" (Croydon), must be taken into account. He writes:

"The Rolls-Royce has a very large engine, which gives great liveliness and speed, both on the level and on hills. Now, although the $3\frac{1}{2}$ h.p. Sunbeam is a very fine machine, it is burdened as regards weight with a gear box, chain cases, and many other, doubtless excellent features in their way, which, however, militate against the aforementioned Rolls-Royce liveliness. Regarded from this standpoint, has not the Zenith a good claim to the title? This machine is very comfortable, not at all unwieldy, has a high power-to-weight ratio, and, with its smooth, silent drive, incorporating the incomparable gear with no power-absorbing gear box, should be hard to beat."

Variable Gears.

Somewhat similar opinions are held by "C.G.E.S." (Croydon):

"I think those who know both types of gears well will agree with me that the variable gear is unequalled for solo riding. The Rudge and Zenith are both admirable solo mounts.

"I have a 5 h.p. Sports Zenith-Gradua, and for silence, speed, and reliability I would not change it for any other solo 'bus. It is a joy to handle."

An American mediumweight twin is the ideal of "Satisfied" (Southport):

"For a solo machine of all-round excellence, I think that my mount, an electrically equipped Indian Scout, would require some beating. Personally, I have not noticed the 'appalling splutter' to which Mr. Norman Williams refers. On the contrary, I find the engine most flexible and smooth running, and possessed of remarkable powers of acceleration. The finish is excellent, and the machine most reliable in all ways. Usual disclaimer."

Mr. Graham Haynes cannot decide between the claims of the small twin and two famous singles:

"For all-round and everyday purposes, nothing can equal the following three for reliability, silence, durability, and value for money, etc. They are the $3\frac{1}{2}$ h.p. Lea-Francis, $3\frac{1}{2}$ h.p. Sunbeam, and 4 h.p. Triumph. They absolutely come out top of the lot."

A Dutch correspondent, writing from the Hague, gives his choice in his *nom-de-plume*, "Raleigh":

"Neither finish nor torque (especially when unable to run slowly and using too much petrol) alone will make a machine good.

"Torque and balance, spring frame, interchangeable wheels, and chain cases are the first necessities before it will be possible to compare a motor cycle with any car at all.

"The get-at-ableness is another interesting point for the owner-driver. Now we have at last one such machine. For me every other mount is dead. I am sorry."

That price should not be considered is the view of "S.K.C." (Belfast):

"In my opinion, for either tourists or speed men, the Norton is second to none.

"I notice that Mr. H. M. Main Clark points out that the price of the $3\frac{1}{2}$ h.p. Rudge-Multi is a large factor in its favour, but then the $3\frac{1}{2}$ h.p. single-speed Norton's revised price is £80.

"The 16H Norton is as comfortable as anybody can desire, and as for power and speed, well, everybody knows what the Norton can do."

"T.B. 5623" (Waterloo) also thinks that value for money should not be considered:

"I have read with interest the names of the motor cycles which your readers give as being two-wheeled Rolls-Royces, and they have occasioned me no surprise whatever, with the exception of the machine chosen by Mr. H. M. Main Clark, viz., the Rudge. I admit that this machine is certainly very fast on the level, but still I do not think that anyone will say that it shines on freak hills.

"It is not my intention to run down the Rudge, but I should like to know why Mr. Main Clark should mention this machine when he possesses a Sunbeam. A Rolls-Royce is not cheap, so I fail to see that price has anything to do with the choice of 'the world's best solo machine.' One has to pay for luxuries."

Running economy is named by Mr. John W. Parr as a desirable feature:

"I have owned and ridden many makes of machines, but none of them can come up to the 1921 $3\frac{1}{2}$ h.p. Ariel for reliability, durability, economy, and all-round excellence. Usual disclaimer."

Dr. G. R. Harland replies to the question directly:

"I do not know, as I have not ridden all of the many makes. I have owned sixteen motor cycles, including Humbers, Triumphs, P. and M.'s, Douglasses, Indians, Royal Enfields, and Velocettes. My present two mounts are A.B.C.'s, and I should like to say that in my opinion they are incomparably the best of the lot; they are fast, quiet, very comfortable, extremely easy to start, they never in the least overheat."

A Two-stroke Favoured.

"Ivy Three" (Olton) tabulates his reasons for choosing the machine of that name:

- "(1.) Low initial first cost, low weight, and perfect finish.
- "(2.) Extraordinary reliability in every branch of the sport, and possessing extreme simplicity.
- "(3.) Silence without loss of power.
- "(4.) Low petrol consumption, and, therefore, cheap upkeep.
- "(5.) Ability to take a sidecar if required.
- "(6.) Speed when necessary without vibration.

"I am the proud owner of an Ivy Three, and, without any special tuning whatever, am obtaining 105½ m.p.g."

An earlier letter from "—Umph" is backed up by "Tri" (Wallasey):

"His remarks about monotonous reliability, superb detail design and finish, and revelling in being neglected, etc., are not exaggerated in the least. The Triumph is, without a doubt, 'it.' Usual disclaimer."

Few of the machines already mentioned stand up to Irish roads, according to Mr. J. W. Wallace. He continues:

"Seemingly, none of your correspondents have taken into consideration the cost of maintenance for each machine. I have ridden nearly all the leading makes of motor cycles from 1910 to the present date, and may candidly say that among the lot I have never found anything to be compared with the 'old contemptible,' the trusty Triumph, for solo work, reliability, comfort, and, principally, design. I am at present the proud owner of a 1920 C.S. Triumph, on which I travel about twenty miles per day, and this machine has cost me nothing in repairs (tyres and tubes not included) up to the present.

"The war has proved to us that the trusty Triumph is the world's best all-round motor cycle, for reliability at any rate."

**SPEEDOMETER LIGHTING.**

Efficient and very neat, this new Cowey speedometer lamp is operated merely by pressure on the top portion. Price 20s. (The Cowey Engineering Co., Ltd., Archer Works, Kew Gardens, Surrey.)

**FOR PILLION ENTHUSIASTS.**

To avoid being obscured by a pillion passenger's coat, etc., this patented number-plate is extensible to the rear, being mounted on telescopic rods, clipped to the carrier. (Richard B. Higgins, 43 Freehold Street, Spring Bank, Hull)

**POSITIVE MAGNETO CONTROL.**

On the Villiers flywheel magneto, the control lever is sometimes very "free"; the quadrant illustrated, sold by Read Bros., 4, Goods Station Road, Tunbridge Wells, provides a range of positive stops between full advance and full retard.

Improved Valve Attachments.

SINCE the F.E.W. valve protectors were first produced, several modifications have been introduced. The reciprocating sleeve is now lubricated by an annular felt washer inside the

The latest type F.E.W. valve lubricator shown dismantled. The upper sketch depicts the protectors on a Triumph engine

stationary upper portion; the device is also more easily fitted, a special valve spring clip being provided. The manufacturers are F.E.W. Patents Co., 217, Gordon Road, Peckham, London, S.E.15.

For Carrying Spare Petrol.

SEVERAL readers have commented recently in the correspondence columns of *The Motor Cycle* on the difficulty of carrying a spare supply of fuel in the ordinary two-gallon tin. The Greenwich carrier, which is made by Duffett Bros.,

Greenwich spare petrol tin carrier, complete with lock. (Inset) How the tin is inserted and retained in position

78, Great Jackson Street, Manchester, together with the special tin, provides a safe means of storing an ample supply of petrol for emergency use. It is quickly detachable and rattle-proof.

**A SIMPLE BELT FASTENER.**

Designed by a well-known competition rider, J. S. Holroyd, of Holroyd Motors, 6, Warwick Street, Regent Street, London, W.1, this simple belt fastener consists of only three main parts, incidentally providing a very short gap between the two ends of the belt.

**NEAT LEVER-OPERATED LAMP.**

No refills are necessary for the Deklalite inspection lamp, current being supplied directly from a dynamo operated by the hand-lever. Price 25s. 6d. (Dekla, Ltd., Dekla House, 168, Great Hampton Street, Birmingham.)

**DUAL-PURPOSE PILLION SEAT.**

Spare belts or tools may be carried with safety in the locked compartment of the Box pillion seat, access to which is gained by hinging the cushioned lid. The price is 42s. (The Box Pillion Seat Co., 42, Earl Street, Coventry.)

SILENT OVERHEAD VALVE GEAR.

One Face Cam driven by a Vertical Shaft operates Both Valves.

MANY new types of overhead valve engines have appeared within the last few months, but most of them have adhered to the practice of applying push rods, tappets, and internal or external cams.

The efficiency of this type of valve operating mechanism has been proved in competition, but there are many points on which it is open to improvement, and these the designer of the engine under review has set out to eliminate.

On the Newson engine, as it is called, a bevel-driven shaft rotates a circular face cam housed in a chamber above the cylinder head. A small bevel on the crankshaft drives a 2 to 1 pinion bolted to the tapered end of the vertical shaft, whilst keyed to the latter is another bevel, which drives a Thomson-Bennett magneto accessibly mounted on an aluminium plate cast integrally with the bevel housing. A ball bearing is located at either extremity of the shaft, the top one forming the base for the circular cam. Here another "eliminating" feature is found, since both valve rockers are operated from the same cam.

Friction is reduced by the use of a ball fixed beneath the rocker and lying in the cam channel. The axis of the rockers is provided with oil-retaining slots, whilst the lubrication of the bevels and shaft is effected by the oil vapour forced up

Sectional drawing of the Newson engine, showing clearly the main details of the valve gear.

the casting by the pressure in the crank case.

Conical valve springs are used, the cotter pins being retained by means of recessed spring cups. The valve lifter is simple in the extreme. A small lever and cam are located in a boss in the valve box, the cam lying directly beneath a small tongue on the rocker.

1½ in. valves with a .4 in. lift are used, and the 1½ in. diameter of the straight through induction and exhaust port is adequate to ensure the efficient and unobstructed passage of the gas. A cast iron cylinder, having a bore and stroke of 63×80 mm. (248 c.c.), is held to the crank case by four long bolts, which also retain the valve box in position.

The crankshaft and the 7 in. internal flywheels follow standard practice. A somewhat novel piston, however, is incorporated. It is of the slipper type, and narrow, deep rings of the aero engine variety are used. ½ in. roller bearings are fitted to the big end, whilst oil grooves fed from the crank case encircle the crankshaft.

Incorporated in a neat lightweight frame under the name of the Reyre-Newson, this power unit has already enjoyed success in various speed events.

The designer is Mr. S. C. Newson, of 32, Eastbourne Street, Stamford Hill, London, N.15.

A SIMPLE MOTOR ATTACHMENT.

The Cyclotracteur, a French Production, arranged for Front Wheel Friction Drive.

AS the motor attachment forms a very important link between the pedal cycle and the lightweight motor cycle, a new fitment of this description

Simplicity is the keynote of the Cyclotracteur. The engine is a 50×55 mm. four-stroke, and the transmission friction drive on to the front tyre.

will possibly interest those of our readers who are considering mechanical propulsion for the first time.

The Cyclotracteur, which is of French origin, was exhibited at the Paris Show with a large number of similar auxiliary attachments, and attracted considerable attention.

A single-cylinder engine of 50×55 mm. bore and stroke is suspended in a V shaped tubular frame, the converging ends of which are fitted into the front wheel hub spindle, whilst the long arm of the frame is attached to the head of the cycle frame. An automatic inlet valve is used, whilst the exhaust is mechanically operated. Petrol sufficient for a fifty-mile run is carried in a circular tank clipped to the handle-bars, adequate lubrication being effected by a small gear oil pump in the crank case sump.

Friction drive on to the front tyre propels the machine; and, by the use of a handle and telescopic tubes, the whole unit can be lifted, and contact between the friction roller and tyre is broken. A floatless carburettor supplies the mixture, which is regulated by a lever on the carburettor body. The jet is fed from an automatic valve in the barrel. Ignition is by a small magneto, driven by a pinion engaging with the cam wheel.

The attachment can be fitted to any bicycle, and is a distinctly neat device.

Sole distribution in the British Empire is in the hands of the British Motor Car Co., Ltd., 1 and 3, Brixton Road, London, S.W.9.

The Cyclotracteur—a French motor attachment fitted to a lady's bicycle. Its neat appearance is an asset from a lady's point of view.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

HEAD LAMP DIMMING ETIQUETTE.

Sir,—If the owners of cars with bright lights are just recognised when they switch off while we motor cyclists are passing, I think it would help matters a great deal; it only needs a wave of the hand. My idea is that if they know it is appreciated they will continue to switch their lights off and give people with the small lights a "look in."

REG. GREEN.

COMPARATIVE INSURANCE RISKS.

Sir,—May I ventilate a grievance with reference to insurance? The various companies seem to think that speed is proportional to horse-power. As the owner of an 8 h.p. sidecar outfit, I am charged 50% more than the owner of a 3½ h.p. outfit. If it is desired to average 20 m.p.h. over hilly country the latter has to travel up to 30 m.p.h. on the level and down hill in order to make up for going up hill at 8 or 10 m.p.h. A powerful engine enables the driver to maintain a steady 20 m.p.h. Which involves the most risk?

H. S. LITTLE.

SEATING ACCOMMODATION ON CYCLE CARS.

Sir,—Under "Cycle Cars Under Test," you describe a test of the Tamplin. Perhaps my own experience may be interesting to you.

SEATING.—The back seat is uncomfortable, and is really more of a dickey. Passenger's legs cramped; windscreen gives no protection to the passenger.

BRAKES.—Foot brake, good; side brake, difficult to operate without moving the passenger's legs.

No ratchet. If left on a hill, gear has to be engaged.

Owing to short steering lock, turning the car round is quite a business.

I can fully endorse all "Benedict" says regarding speed and power.

Charing, Kent.

GARAGE TROUBLES.

Sir,—My son was "demobbed" in March, 1920, and we started a garage. We have a good many customers among labourers, fine fellows, honest and hard-working. But we had a tradesman customer who ran up a bill for over £15. He came in with his motor cycle with a broken valve. The engine was dismantled and examined, and found all right. The customer came early next morning and took the machine to another garage, and refused to pay his account till two days before the case would have come into court. A second customer paid a monthly account of £15 to £20 regularly enough till the end of the season. He let one bill run a fortnight, then paid, but a final account twelve months' old is still outstanding. Another customer has not yet settled 1920 accounts. This is only a small garage, and not an old-established one either.

Norfolk.

A CATECHISM FOR POTENTIAL CYCLE CARISTS.

Sir,—At the forthcoming show there will be hundreds of sidecar owners buzzing round the cycle car stands, like bees round a hive, and wondering whether this season they will not scrap the sidecar outfit and go in for something more comfortable.

Well, if they do they will get the comfort all right, but before deciding let me advise them to ask themselves the following questions? If the answer is in the affirmative, let

them go in for the cycle car, or at the later show a three-wheeler.

1. Are you *absolutely and utterly certain* that you will never want to take three up?

2. Are you quite prepared to lay out an initial cost of close on £300? Remember insurance, tax, garage, and delivery charges are all about double.

3. Are you prepared to stand a depreciation of close on £70 for the season?

4. Are you prepared to pay car charges for any repairs, overhauls, etc., and also car charges for accessories and spares?

The writer thoughtlessly embarked on a runabout last season, and now regrets a much depleted bank balance.

Edinburgh.

THREE-WHEELER.

BRITISH MACHINES IN SWITZERLAND.

Sir,—During a two months' walking tour from one end of Switzerland to the other, I noticed the following machines, placing them approximately in the order of their frequency: Motosacoche, Condor, Indian, Enfield, Douglas, Triumph, Scott, A.J.S., Heuderson, New Hudson, Moto-Rève, B.S.A., Clyno, James, N.U.T., and Zenith. Two Triumphs I met on top of the Gurka Pass (about 8,000ft.), and, according to their riders, they had had no trouble coming up.—The total number of British machines must very nearly have equalled that of the Motosacoche.

Montreux.

D. L. GALBREATH.

GERMAN MAGNETOS AGAIN.

Sir,—Recently, in a large motor shop in a well-known South Coast town, I was shown the latest thing in light-weights. I was particularly interested in it, as I own an elderly, but extremely active machine of the same type myself. My machine, being one of the earliest made, has a Bosch magneto, because in those days the makers had a stock of these magnetos, and had to use them up. The Bosch magneto, as everyone very well knows, was a German magneto, and a very efficient electrical machine.

I have frequently read articles stating that, in the last few years, British electrical firms have produced magnetos equally good as, or even better than, the Bosch or any other German magneto.

I also remember reading, shortly after the Armistice, an advertisement headed "No Trading with Germany," under which were subscribed the names of several firms (chiefly motor cars and motor cycle manufacturers) who thereby pledged themselves not to deal with the (at that time) enemy nations.

Hence, I was astonished to observe on this latest model of a representative British machine that the magneto was tallied "Robert Bosch," and underneath, "Made in Germany."

I commented upon this to the proprietor of the shop, who evinced no surprise; but remarked that it was a well-known fact that German magnetos were being fitted this year to that particular model.

I am still astonished that such should be the case. One reads every day about the black outlook of trade for us, with the German rate of exchange, and the people working fourteen hours per day all helping the Germans to undersell us, and yet here is one of the best known motor cycle firms dealing direct. I feel sure I am not the only one of your readers who would like to know *what about it?*

C. T. NULHALL.

WHERE DO THE TAXES GO?

Sir,—The time is drawing near when we will require to renew our licences. Are we to be fleeced in the same outrageous fashion again?

Excepting the unwarranted, and unwelcome attention we get from the police everywhere, I should like to know what the motorist of to-day gets for his money.

For my contribution to the State, I get mauled to death in riding the present-day "roads." One would not mind paying if the money went on the roads, but it does not.

I think I speak the opinion of the majority of motorists when I suggest that the clubs and motoring associations of this country would be much better employed, and more valued, if they would confine their energies and attention to the question of taxation, which is out of all reason, than to useless trials, which serve no purpose whatever.

Stoke-on-Trent.

ZENITH.

COLLECTING FRICTIONAL ELECTRICITY!

Sir,—My question in regard to the alleged "frictional electricity" collected by a certain spark intensifier has elicited quite a number of replies from various correspondents.

That of "J.L." in your issue of the 6th inst., is very unconvincing. That of Mr. W. C. Wingfield is certainly ingenious; but, as far as I can see, would hardly account for the alleged increase in power.

Why does "Southerner" want a Wimshurst and condenser when a common or garden magneto is quite effective?

Some correspondents adopt the attitude of "try it and see the benefit"; but, unfortunately, I am one of those strangely constituted individuals who require the reason, for reason there must be. Moreover, I must see the reason for the benefit before I try such a gadget.

"Radio" tells me that, owing to the higher e.m.f. built up, a quicker discharge will take place—"a sharper and quicker spark," to quote his words. I would remind him that the rate of flow of electric current is constant where the capacity of the circuit is the same, so a voltage increase can make no difference; and, moreover, the spark will occur immediately a sufficient e.m.f. has been built up to spark the gap.

In any case, a greater advantage would be obtained by increasing the plug gap than by fitting an extra gap in series, for if the magneto would spark across the two in series it would certainly spark across an increased plug gap, and in this case a greater area of spark would be exposed to the mixture—a most decided advantage, particularly in the case of such engines as a flat twin.

It is a fallacy greatly existent among motor cyclists that a small gap gives easy starting. A gap of $\frac{3}{16}$ in. to $\frac{1}{8}$ in. on a bad starter will often end this trouble, particularly where the trouble is due to imperfect carburation when cold.

Revenons à nos moutons: the arguments in favour of the spark gap in series with the plug are not good enough, and some of the statements and claims made on its behalf in an advertisement in a very prominent daily paper are an insult to the intelligence of the motoring public.

L. W. E. HARTLEY.

Sir,—Being very much interested in the present discussion, I would like to add my little quota. In the first place, I would like to say that the title given by your correspondent, "Frictional Electricity," conveys an erroneous impression regarding the condition of affairs when an auxiliary gap is used between the plug and magneto.

For very many years I have studied and experimented in the generation of X-rays, especially with the influence machine, as opposed to the same rays generated with an induction coil, and I found, along with one or two other experimenters on the same subject, that a series of small spark gaps, made up in the form of what are known as choke coils, placed between the electrodes of the influence machine and the X-ray tube, produced X-rays of a much more penetrative power, and were excellent for radiography, but were not so suitable for visual work owing to their intermittent sparking.

Now, I take it that these spark gaps, as described above, have their counterpart in the auxiliary gap as used with a motor engine plug and magneto, therefore their function to me appears to be to create a higher dielectric valve of the gas formed within the cylinder, added to which is the dielectric value of the air, thereby raising the potential of the energy

required before a spark can occur. Thus, the higher this dielectric value can be raised before a spark occurs the higher the potential, but the point to which the potential may be raised is dependent upon the dielectric strength (or resistance to leakage) of the generator itself.

In conclusion, the writer would like to add a fact of his own observation in connection with the phenomena of high potential currents, i.e., that a series of small air spaces between the electrodes of the secondary and the primary spark gap are much more efficient in producing a higher potential than one large spark gap, hence the reason why the plug joints as used in a motor engine cannot be separated more and obtain the same result as with the auxiliary gap.

Finally, it would be well if your readers would understand that the magneto is an induction machine, and that there is no frictional electricity in connection with it in producing the secondary current.

FREEMAN LEE, D.B.O.A.

[The heading under which this correspondence has appeared is a quotation from Mr. Hartley's original letter enquiring the advantages of a spark-gap.—Ed.]

Sir,—As an electrical engineer and motor cyclist, I have been interested in the letters in recent numbers of *The Motor Cycle* under the above heading dealing with extra spark gaps. Your correspondents seem, however, to miss the point, which is that the length of the extra spark gap, the magneto, and the plug should be suited to one another. If this is so, the result should be a more intense spark at the plug points, and an oiled up plug or a plug shorted by carbon, etc., would be automatically cured. On the other hand, an extra strain would be put on the insulation of the magnet's high-tension winding.

Consider what happens when the break in the primary or low-tension winding occurs. We break a highly inductive circuit, the collapse of the flux causes a rapid rise in potential in the secondary circuit, and, consequently, at the plug points, where the electrical strain increases until the insulation of the air between the points or electrodes breaks down and a spark passes.

Suppose an oiled up plug, or one the electrodes of which are bridged by carbon, the insulation resistance between the electrodes is low instead of very high; as the potential in the winding starts to rise, a current starts to flow across the electrodes via the oil or carbon, the energy in the secondary (high-tension) winding is gradually dissipated and no spark is produced.

Now suppose an extra spark gap to be in circuit, remembering the plug is oiled up or bridged by carbon, and thus offers a low resistance, the potential rises at the electrodes of the extra gap, a spark passes, which means a sudden rush of current, which burns out the fault at the sparking plug electrodes, and so cures an oiled up, etc., plug.

A decorated A.J.S. sidecar that obtained a prize in the recent carnival held at Wrexham. The owner is Mr. B. Jones, of the North Wales Motor Exchange.

With a sidecar as "tender," this caravan made a capital place of abode during the past remarkable summer. The photograph was taken on the banks of Loch Eck by Mr. R. Hay, of Dunoon.

When the plug is O.K. we have two spark gaps in circuit, and a greater rise in potential must occur before a spark passes than when there is only one gap (the plug). Hence, the extra strain on the magneto insulation, and when the spark does pass it is thus more intense.

May I apologise for being "long winded," but I have tried to make things clear to the non-electrical reader.

H. W. BARCLAY.

EXORBITANT HOTEL CHARGES.

Sir,—While out motoring the other afternoon we called at a large hotel in the Midlands, which is apparently a well-known rendezvous for motorists, and ordered tea, bread and butter, and cakes. Our total consumption was four small cups of tea—all we could extract from the pot, as we discovered on adding hot water, the latter experiment apparently not intended, as we had to ask for hot water—four small pieces of bread and butter, which we concluded had been left over from the previous week-end, and three chocolate-coated biscuits, size one mouthful. The milk was curdled, and the charge was 8s.

If this is not a case of profiteering, may I ask what is, and I should also like to know the cost of a substantial meal? Perhaps one of your readers could inform me, as I do not feel inclined to try the experiment.

I consider you will be doing your readers an invaluable service by publishing this as a warning to the unsuspecting riders who, like myself, cannot afford such excessive charges.

DISGUSTED.

SANS CARBURETTER.

Sir,—Permit me to offer a few suggestions *re* the mysterious behaviour of "Puzzled's" 1920 4 h.p. Triumph. I should imagine that his piston is somewhat "sloppy," and the rings are of a poor fit, or, quite possibly, his cylinder is very badly scored. This would naturally allow the paraffin to escape through into the combustion chamber, where, once compressed, it is very easily fired.

(a) Regarding the distance "Puzzled" could travel on a crank case full of paraffin, I do not think he would do many miles before the engine "seized up," as there would be no means of lubrication, which in this case is thrown up by the flywheels from the crank case, now that oil is replaced by paraffin.

(b) I should certainly retain my carburetter if I were "Puzzled," as he will no doubt find to his cost that feeding the engine with paraffin in this manner is a "wash-out" in the case of the 4 h.p. Triumph. L. R. TANNER, JUN.

Sir,—In reference to the strange occurrence mentioned by "Puzzled" in his letter, I beg to forward my humble solution of this matter and to answer his questions.

On kicking over his engine, pressure would be exerted on the paraffin in the crank case on the induction and firing strokes. This would tend to vaporise the paraffin, a means of egress being afforded to it by the piston ring slots and any "sloppiness" in the piston generally. His magneto,

presumably, being good, an explosion would occur, the pressure on the piston top during the firing stroke preventing any paraffin gas passing into the cylinder. The engine would then function in the ordinary way until the paraffin was exhausted. As the heat increased, so, I presume, would the efficiency of the engine.

(a) It is doubtful if enough power would be generated to drive the machine along the road. In any case, it would certainly only "rev. over" until the bearings seized up, paraffin being distinctly the reverse of a good lubricant.

(b) I should advise "Puzzled" to keep his carburetter and not to wash out his engine with paraffin again while it was assembled. New engines especially have a tendency to run into a solid mass when so treated. Paraffin penetrates to places in a few moments which would not be reached by oil in half an hour.

CHARLES A. EXLEY.

TOOL KITS—PHEW!

Sir,—I had the pleasure of sending "Ubique's" article on "Tool Kits" to the agent who supplied me with a new outfit this year, merely to confirm all the nasty things I have said to him on the subject. I also sent him the following, and declined to be responsible for consequential damages (if any) as a result of his reading it. "Ubique's" article brought it up, and he is entirely to blame.

PARADISE LOST.

A motor cycle tool,
As a general rule,
Is considered the ointment's fly;
And none but a curate
Could really endure it,
And avoid words not heard on high.

Out in the motor shed,
Where you are skinned and bled,
Screwdrivers neither drive nor screw;
No insulating tape
There could prevent escape,
Language of a sulphurous brew.

Pliers are made to do
When spanners laugh at you,
Amidst oil, and petrol, and gore;
The cursing mechanic
Becomes more satanic,
Till brimstone's his lot evermore.

Gateshead.

NEW MODELS.

Ivy Modifications.

Redesigned Cylinder for
Sidecar Work.

NO very great changes will take place in the 1922 Ivy models. A neat little dummy belt rim brake will be added to the front wheel, the tank will be slightly modified, though it will retain the distinctive Ivy outline, the spring forks will be slightly altered to conform with the type of fork associated with the name of Brampton, and a new cylinder will be fitted to passenger machines.

This cylinder is an imposing casting with long deep ribs and an increased cooling area for the head. Its introduction is due to the fact that the manufacturers considered their standard cylinder more suitable for solo and sporting work, and rather on the high efficiency side for towing heavy loads. The new casting has

The latest sports model 3 h.p. Ivy, although unaltered in its general appearance, has been improved in several minor parts.

been designed for general all-round performance, and a considerable improvement in pulling at low speeds is claimed. From our own experience, we are aware

that slow pulling was always a commendable feature of Ivy engines, so that the new design should be remarkable in this respect.

The 1922 Levis
Programme.Gear Boxes now Optional on
Both Models.

VERY little alteration will be made to the popular little 211 c.c. Levis in the near future. All essentials remain unchanged, but a few minor details have been cleaned up. A very smart little machine will, however, be staged at Olympia embodying the 247 c.c. engine. Having a bore and stroke of 67×70 mm., this engine is the T.T. power unit modified for touring purposes. It has plain bearings throughout, and all the well-known Levis features are retained. It will be fitted in a new frame with sloping top tube, the tank being carried on substantial platforms brazed to the duplex detachable lower rails; 24×2½ in. tyres are fitted. A feature of this new type will be that the single-gear model may be converted to a two-speed machine with-

Entirely new frame design has made a most attractive 2½ h.p. Levis.

out structural alteration. The sloping tank contains 1½ gallon of oil, and just over half a gallon of oil. Malleable lugs have been discarded wherever possible in favour of steel stampings. The price of the 247 c.c. machine with single gear

is £56, while that of the 211 c.c. machine is £48. In each case £10 is charged for a two-speed gear box with chain and belt drive and clutch; while a kick-start may be added if desired for a further charge of £2.

Bleriot-Whippet
now
Chain-driven.Improvements in Bodywork
and Transmission.

VARIABLE pulleys and final belt drive have been abandoned in the Bleriot-Whippet cycle car in favour of an orthodox three-speed and reverse gear box and all-chain transmission. There are several other detail improvements for 1922, including a body 2½ in. higher than this year's type. The magneto is now placed at the rear of the 8 h.p. Blackburne engine, while the standard equipment includes a combined

A slightly higher body enhances, if anything, the smart appearance of the new Bleriot-Whippet cycle car, the transmission of which is now by chains throughout.

lighting set, hood, screen, and spare wheel. The price of the little vehicle,

which is made by the Air Navigation and Eng. Co., Ltd., Addlestone, is £198.

An O.H.V. Sporting Triumph.

Four-valve 499 c.c. Engine Tested in the T.T. now Incorporated in a Solo Mount, fitted with 26 x 3in. Tyres, and Adequate Mudguarding and Silencing Arrangements.

CONSIDERING that the model upon which the Triumph reputation has been chiefly built is essentially a dual-purpose mount, it is a wonderful testimonial to its qualities that so many consider it to be the ideal solo machine. It is only natural, therefore, that the announcement of a sporting o.h.v. $3\frac{1}{2}$ h.p. Triumph, exclusively for solo use, should arouse widespread interest. We are now able to give full details of the new model, which, as anticipated, is fitted with the Ricardo design of engine.

Used in the Big Speed Events.

This engine, as used in the T.T. Triumph, was first fully described and illustrated in *The Motor Cycle* of June 2nd, but as nearly five months' testing in the big speed events has resulted in several important modifications, its general features are recapitulated.

Four inclined overhead valves are disposed in the hemispherical and detachable cylinder head, which has lugs cast on it for the rocker gear. Cowls are situated behind the two exhaust valve stems to assist cooling, while the radiating fins have been designed with a view to most efficient heat dispersion. With this in view one of the lower cylinder fins also acts as an anchorage for the holding-down bolts. Both the head and the cylinder can be detached without removing the engine from the frame.

Masked Inlet Valves.

The inlet valves are "masked"—that is, they have recessed seatings so that the effect of a very quick lift is produced. One-piece nickel steel rockers are carried in dustproof ball bearings, and there are two exhaust pipes extending to a neat silencer with detachable ends and an unrestricted tail pipe. Each valve has two concentric springs, a split taper screwed collar locating the spring cups. The timing gear now resembles the standard Triumph design

Perhaps accentuated by the 3in. tyres, there is an impression about the new sporting Triumph of strength and roadworthiness sometimes lacking on the super-sports type of machine.

Cowls have been fitted behind the exhaust valve stems. This view also shows the disposition of the twin exhaust pipes and the neat detachable silencer. Both the cylinder and the head are of cast-iron

very closely, including, of course, the useful decompressor.

Both the cylinder and the head are now of cast iron, but a slipper type

Ricardo aluminium piston and light reciprocating parts generally are employed; the capacity is 499 c.c. (80.94 x 97 mm. bore and stroke). Apart from a flat base to the crank case, the lower half of the engine follows standard Triumph practice, mainly if not exactly. The usual semi-automatic carburetter is fitted.

Although the power unit deserves very complete consideration, there are several points about the bicycle parts, etc., of the new model which may interest the average reader to an even greater extent.

Designed for Hard Use.

It is apparent at a glance that the machine has been designed for hard use, and not solely for occasional participation in a speed event by an owner who takes it there in a lorry! Dunlop Magnum 26x3in. tyres on round base rims, reasonable mudguarding, and a comfortable saddle are points that will be doubly appreciated on a sports model, while the oil-bath primary transmission, spring drive, and Triumph three-speed gear box have already proved their convenience and reliability. The gear and transmission, by the way, are quite standard, excepting the ratios—4.23, 7.02, and 11.72 to 1.

Improved controllability at high speeds is gained by fitting W.D. type handlebars, Druid forks, and the footrest arm behind the crank case, and thus almost directly underneath the rider. The rear brake pedal is enormously long, and extends conveniently downward to within an inch or two of the footrest.

The approximate weight is 240 lb., and the price, as announced some weeks ago, £120. Deliveries will commence after the Show.

Finally, it must be specially emphasised that, although this model, like all Triumph productions, is of very sturdy and robust construction, it is not intended as a sidecar machine, and it is hoped that owners will refrain from experimenting with an attachment.

A Lady's Sidecar Outfit.

Open Frame and Protected Transmission are Features of the New Comet.

FITTED with a Climax engine of 70×76 mm. bore and stroke (292 c.c.) and a two-speed Albion gear box, with clutch and kick starter, the latest model New Comet is specially intended for ladies' use. A semi-open frame and well-guarded transmission are features that will appeal to the fair sex, while the absence of an outside flywheel obviates another possible chance of damage to skirts and long coats.

Clean lines and sturdy construction characterise the lady's model lightweight New Comet. 24 × 2½ in. tyres are fitted.

Rear view of the New Comet, showing the tool box on the side member of the sidecar chassis and the wide rear guard.

Aluminium foot plates, Druid forks, 24 in. × 2½ in. Dunlop tyres and excellent mudguarding are included in the specification. Attached to this neat little machine is a light, but sturdy, coach-built sidecar, suspended on C springs at the rear and coil springs in front. The chassis is somewhat unusual, and a straight tube, parallel with the cycle frame, extends from the dropped axle to the head of the machine, where it is fixed to a short horizontal bar. The tool bag is mounted on the long side member. After a few miles on the road

we are in a position to state that this little outfit is admirably suited for run-about purposes or for shopping trips. The plucky little engine will pull its full load up reasonable hills on top gear, and low gear is sufficient for all normal work.

Some Good Performances.

It will be recalled that the Climax engined New Comet has several sidecar records to its credit, which proves the power and reliability of the engine, one of the main features of which is the fact that, unlike the majority of two-strokes, inside flywheels are fitted. This accounts for the absence of "ring," so noticeable with most outside flywheel engines. Smooth running and silence are good features of the little outfit, while the finish of the outfit is in black enamel relieved with gold lines, the tank being decorated accordingly. The primary driving chain is enclosed in a polished aluminium case, which also enhances the appearance, and at 87 guineas complete the proposition is quite attractive.

Sirrah and Verus Models for 1922.

All Classes catered for. T.T., Touring, and Sidecar Machines

THERE are few firms who make a wider range of models than Alfred Wiseman, Ltd., Glover Street, Birmingham. In addition to the deservedly familiar Verus, this concern is responsible for the lesser-known, but nevertheless popular, Sirrah lightweight. It may come as a surprise to many that during this year 250 Sirrah machines of one model alone were sold.

For 1922 the Sirrah range is being extended to include almost every type between the single-speed lightweight and a 5-6 h.p. J.A.P.-engined twin with all-chain drive and 26×3 in. Dunlop Magnum tyres. Intended as a double-purpose mount, the latter machine is most attractive, both in specification and appearance, and its very short wheelbase should ensure its popularity as a solo mount as well as with a sidecar.

From the solo enthusiast's point of view, this all chain drive sports Sirrah is probably the most attractive model.

Massive but clean mudguards (8 in. in front), a saddle tank, Brampton forks, a Webb front brake, Sturmey three-speed gear box, and final chain drive through an Enfield cush hub are the salient features of the specification; but it must also be mentioned that the frame is particularly neat and strong, and has survived nearly a year's severe road testing.

At the other end of the scale, the Sirrah two-stroke has a Union (70×76

mm.=293 c.c.) engine, and when fitted with a gear box (Burman), either a plain two-speed or a two-speed with clutch and kick-starter may be supplied. Footboards or footrests are optional. This model, like all its namesakes, will sell at a very competitive price, but not at the expense of finish and general quality.

Coming to the larger lightweights, there is a choice of belt or chain drive, of 2½ h.p. Blackburne, or 2½ h.p. and

SIDECARS.

AN UNPRECEDENTED OFFER!

A limited number of the famous "Grindlay Model-de-Luxe" Sidecar, noted for its efficiently sprung wheel, and cantilever body springing, and without a doubt the most comfortable sidecar on the road, are now being offered at the special price of

£34

(Usual price £39)

This price includes 26" x 2½" Heavy motor cycle Tyre, (or 28" x 3"), four point connections to suit any machine, coverall apron, and coachfinished in any of the following colours: Grey, Black, Mauve, Green, or Khaki, lined to match. Only a limited number are available, so if you require a high-class sidecar at a genuine bargain price, book your order now.

Announcement re PRICES!

After carefully considering the question of "DUNELT" prices for 1922, we confidently announce that we shall be able to make substantial reductions at the Olympia Show. However, in order to take the fullest advantage of the falling market, we have decided not to fix our next year's prices until then:

Meanwhile, on and after Oct. 10th, we are prepared to execute orders at our 1922 PRICES and we will guarantee to refund the difference between our present and our 1922 prices on all machines sold between October 10th and the end of November.

Therefore you can confidently order NOW, with the assurance that whatever reduction is made will be refunded to you. Write for Catalogue and address of nearest agent.

BATH STREET, BIRMINGHAM.

New Models.—

2½ h.p. J.A.P. engines, including a promising sports model with one of the latter power units.

Only advance details are available of the 1922 Venus machines, which are intended for the man who likes the very finest quality, refined detail work, and luxurious finish.

A 5-6 h.p. Twin.

The twin, which will be fitted with a 5-6 h.p. Blackburne engine, will be an out-and-out luxury mount, such details as silencer and chain cases being of cast aluminium. Incidentally, the silencer is a form of semi-streamlined rectangular box of pleasing appearance.

All-chain drive through a Sturmey three-speed to an Enfield cush hub, Brampton forks, a Webb front brake, and Dunlop Magnum tyres also figure in this specification. A Lucas Magdyno lighting set may be added if required.

Perhaps the most interesting Verns, however, will be the 2½ h.p. J.A.P.-engined sports mount, with all-chain

Although this view shows all the main details of the 5-6 h.p. machine, the final production model will have a much neater frame, approximately 10in. shorter.

drive and a three-speed Burman gear box. 24in. wheels are fitted, and everything else is in proportion. Aluminium chain covers and a Webb front brake are two of its refinements. The similar 350 c.c. J.A.P. is used in another

model with 26in. wheels, but otherwise almost identical. Flat handle-bars are, of course, standard.

Finally, there is a 2½ h.p. Blackburne lightweight with, however, only a two-speed box.

Villiers Innovations.

Flywheel Lighting Set and Engine Shaft Clutch.

ANY new features introduced by the Villiers Co., probably the largest manufacturers of two-stroke engines in the country, are of peculiar interest. Undoubtedly, the most important innovation for 1922 is a lighting set combined with the now well-known flywheel magneto. This is a particularly simple and effective arrangement, which has the merit of saving much weight and a subsidiary drive. The flywheel magneto has undergone minor refinements only, but a modified arrangement of contact breaker and condenser render the device absolutely waterproof even without the sheet metal flywheel cover.

By a simple but clever arrangement of parts, the laminated pole shoes of the ignition device are so laid out that anyone with the slightest knowledge of mechanics can add the two coils and connections which convert the machine into a combined lighting and ignition apparatus.

Back plate of the Villiers ignition and lighting set, showing new contact breaker, and the arrangement of ignition and lighting coils.

Current is led directly to the lamp, without any intermediate accumulator, but a large dry battery capable of producing twenty hours light is supplied for use when the machine is standing. A single switch is utilised for the battery and lamps.

In practice, the lamp can be lit mechanically so long as the engine is revolving fast enough to fire, and at under 12 m.p.h. the light thus produced is brighter than that given off by a 4½ volt battery. A four-volt .3 amp. head lamp bulb is used, and, after careful experiment, it has been found that the selected type will withstand the highest voltage given off by the lighting set without burning out. A four-volt .5 amp. bulb is fitted to the tail-lamp; both bulbs, which have bayonet caps, are wired in series.

The whole lighting and ignition device is constructed by the Villiers Co., only the most suitable material being employed throughout, and after erection each set receives a thorough bench test. A detail which is evidence of a practical designer is the fact that the switch lies underneath the battery box, where it is kept dry and is out of the immediate vision of meddling archins.

One other modification consists in grinding away three sections of the taper flywheel fixing, which, by intensifying

the pressure and providing space for any possible oil film, has prevented slip without necessitating the use of a key.

A Multi-plate Clutch.

An item which is of considerable interest to riders of single-geared machines is the optional inclusion of an engine-shaft clutch. Six steel and six bronze plates are housed in an extension of the belt pulley in such a manner as to form a very small and light clutch. The operation is ingenious, and there is no end thrust on the engine-shaft even when the clutch is withdrawn, the thrust being taken between the cable and casing of the Bowden operating gear, and ball races being used between these points. In practice, the cable of the operating mechanism is fixed and the outer case moves.

As regards the engine itself, the only alteration of any importance lies in the method adopted for obviating piston slap. To effect this very desirable end, the centre of the gudgeon pin has been offset to a slight degree so as to coincide exactly with the centre of gravity of the piston. It is claimed that the results obtained from this modification are excellent, and that rattle has been to all intents and purposes eliminated thereby.

Head lamp and battery case of Villiers lighting set. The switch is located below the battery box

The new Villiers engine shaft clutch for fitting to existing engines.

In conclusion, we may say that the light given off by the new lighting set is most satisfactory, and the makers are to be congratulated on their productions.

The 1922 Four-speed P. and M.

Increased Engine Size, Simplified Lubrication, Improved Mudguarding, and General Refinement of Detail.

THE policy of Phelon and Moore, Ltd., of Cleckheaton, Yorkshire, has been a year by year improvement of an originally excellent layout; startling modifications have always been avoided, unless they were proved necessary and practical by test. This year, however, the innovations for 1922 are considerable. In the first place, reference must be made to the four-speed gear box, first described in *The Motor Cycle* of August 25, 1921, page 729. A team equipped with these competed in the A.C.U. Six Days Trials with considerable success, and since this gear was described the change speed lever has been considerably simplified in design. It will be remembered that two speeds are given by the well-known selective clutch gear, and two additional gears by a dog clutch gear box. The standard gear ratios are 5.5, 7.8, 12, and 18 to 1, but higher gear ratios can, of course, be supplied for a machine used exclusively as a solo mount.

Lengthened Stroke.

So far as the engine is concerned considerable alterations have been made. It has been realised that the P. and M. is, and will be, largely used for sidecar work, and the engine size has consequently been increased to 84.1 x 100 mm. (555 c.c.). The cylinder casting will revert to the old pattern, with radiating fins at right angles to the centre line of the cylinder; the fins, however, are considerably deeper, and they are now cast on the cylinder head, increasing the cooling surface. More room is also available above the cylinder head for cooling purposes, while the frame lug adjacent to the cylinder also has been removed, increasing the air space. The engine is now absolutely oil-tight, and has an exceptionally clean appearance, while the timing case is circular and contains a new and simplified timing gear, there being only two gear wheels, of which the larger carries the double cam for inlet and exhaust valves, with a small half-compression cam between them, which is brought into operation by an eccentrically mounted tongue worked by a small lever on the outside of the timing case. The heel of this tongue also works the exhaust independently of the half-compression device.

The crank case has been increased in size, and the piston now dips down into

The 1922 model P. and M., which is now fitted with a four-speed gear box and a larger engine having a cubical capacity of 555 c.c. A Brooks cantilever spring saddle is fitted as standard.

it, receiving oil thrown up from the flywheels. A Best mechanical pump driven off the camshaft delivers oil through a sight-feed on the tank to the engine, and the pipes now pass through the tank, and are hidden from view. The valve rocker spindles are supported at both ends, and the whole timing gear is a very fine piece of design. Clip-on spring protectors are fitted to the valve springs.

pendently of the ratchet lever, while the front rim brake now has the shoe reversed, and has been made more powerful. The front guard is in one piece with its valances, and is well splayed out at the rear.

Fully Equipped.

The equipment of the machine is particularly complete. A Brooks B600 cantilever saddle is fitted, while the lighting outfit consists of Lucas acetylene lamps, the head and tail lamps being supplied by one generator for the side lamp, and a licence holder is also provided. Points of convenience and appearance have been well studied, as the control wires pass through the handle-bars, and the new tank holds two gallons of petrol and 3½ pints of oil. The ground clearance is 10in. from the crank case, and 5½in. from the footrests.

The sidecar is, of course, produced by the makers, and is considerably improved in construction and bodywork. Lugs incorporated in the motor cycle frame serve as points of attachment for the chassis connections, and the latter do not require adjustment to attain good alignment. Now that the capacity of the engine is increased in conjunction with the four speeds, the outfit should be capable of going anywhere.

The new change-speed lever.

Modifications in the transmission have also been effected. The front chain case is of aluminium, while the rear case has been much simplified.

The frame is composed exclusively of round tubes, and is exceedingly light; and, though the machine weighs about 12 lb. more than the 1921 model, the sidecar with which it is fitted is 25 lb. lighter, making the total weight of the outfit considerably less than the previous model. The ratchet hand brake is retained, but has been moved to the off side of the machine. The same brake can also be applied by means of a pedal working inde-

Section of the P. and M. four-speed gear, which was described some time ago. Two primary chains are used in conjunction with a two-speed dog clutch gear box.

Details of the decompressor device of the new P. and M. engine.

Solo and Sidecar O.K.'s.

A Three-speed All-chain Sports Model added to the Range.

(Left) Perhaps the most popular of the O.K. range is this single-gear lightweight, which may now be fitted with the makers' own engine.

(Right) A similar model, with an Albion three-speed gear box.

THE makers of the O.K. Junior machines (Humphries and Daves, Ltd.) must rank among the pioneers of the lightweight sidecar movement; and as one of the little O.K. outfits gained special mention in the judges' report of the Six Days Trials, considerable interest centres in the details of the 1922 edition of this model.

An O.K. engine, which has a bore and stroke of 70x76 mm. (292 c.c.), only will be fitted to the sidecar outfit, and, with an Albion three-speed gear box with clutch

and kick-starter, it makes an economical, handy, and capable little passenger machine. It sells complete at £96 12s. An identical model without the sidecar is priced at £71 8s.; while an entirely new departure for next year will be a three-speed all-chain drive sports machine, also with an O.K. engine, which is listed at £69 6s.

The extremely popular £45 3s. single-gear O.K. has not been altered to any appreciable extent, although an O.K. or Villiers engine is optional. Fitted with

an Albion two-speed box and final belt drive, the price is £60 18s., or with three-speed clutch and kick-starter, £65 2s.

All the models are fitted with the well-known and most efficient O.K. front fork, which allows great freedom of movement to the wheel. It will be remembered that last year the springs were strengthened by the addition of another leaf. This has proved most satisfactory.

Excellent finish and a pleasing appearance are undeniable features of the O.K. range.

New 6 h.p. Douglas Sidecar Outfit.

All 1921 Models Retained, with Minor Improvements.

A SIDEAR outfit which, it is claimed, will exceed 60 m.p.h., is the chief addition to the Douglas range of motor cycles for 1922. Although new to the public, this machine has been on the road for many months, and we have heard very good accounts of it from various sources. We have also seen it perform when in its "hush, hush" disguise, and long ago we had formed the opinion that, when marketed, it would be a worthy addition to the short list of really fast machines produced in this country.

Having a bore of 83 mm. and a stroke of 68 mm., the piston displacement of this

The flat twin 6 h.p. Douglas, of 733 c.c. The overhead valve rockers are lubricated by a wick system enclosed in an aluminium box.

Over 60 m.p.h. has been attained by the new 6 h.p. Douglas sidecar outfit, which is fitted with an engine on the same lines as the "3½."

new engine is 733 c.c. From these figures it will be seen that the power unit is a development of the speedy 3½ h.p. sports model, the bore and stroke of which are 68 mm.

An o.h.v. 6 h.p. Twin.

The new 6 h.p. unit embodies the overhead valve arrangement, now well-known as a feature of the smaller machine, and which, it will be recalled, includes a unique system of wick lubrication for the rockers contained in aluminium boxes over the cylinder heads. All bearings in the engine are of the ball or roller type, the cylinder heads are detachable, and the connecting rods are of H section with double row roller big ends. A special heated induction system is also incorporated.

Two shock absorbers are fitted, the first on the engine shaft, and the second inter-

New Models.—

posed in the rear hub. $\frac{5}{8} \times \frac{1}{4}$ in. Renold chains transmit the power via the Douglas three-speed gear box, which embodies the clutch and a kick starter on the off side.

The $3\frac{1}{2}$ h.p. Sports Model Douglas. Observe that the tool-box is carried on the mudguard in the absence of a carrier. It is sold equipped with lighting set and horn.

Incorporated with the rear shock absorber is a very powerful internal expanding brake, operated from the right-hand foot pedal. A Douglas patent V shoe brake, acting on a wedge-shaped drum running on roller bearings, is fitted to the front wheel; at the same time both wheels are

quickly detachable and interchangeable by removing the knock-out spindle. Light car type rims are used with specially large oversize tyres. Aluminium foot-boards of a very handsome design are fitted, and an extremely rigid tool box is carried as on the $3\frac{1}{2}$ h.p. o.h.v., i.e., on the mudguard, instead of on the more usual carrier, which is not fitted.

Finished in the Douglas blue, the side-car equipment includes apron, windscreen, dash, etc.; and the complete outfit, fully equipped with lamps, generator, horn, and licence card holder, is £165.

Embodying minor improvements only, the other and well-known models of the Douglas range will be marketed next year at prices which show a substantial reduction over the 1921 figures. The 4 h.p. outfit will be offered at £135 and at £110 solo, fully equipped. The 1922 $3\frac{1}{2}$ h.p. sports model is £130; the $2\frac{3}{4}$ h.p., with three speeds, clutch, and kick starter, £90; and the ever popular little $2\frac{1}{4}$ h.p., with plain two-speed, at £75, also fully equipped. This is surely the most comprehensive range of flat twins imaginable, embodying, as it does, four different engines.

Few Changes in Wolf Models.

Dual Purpose, Medium-weight Solo and Two-stroke Lightweights.

LITTLE modification has been deemed necessary in the products of the Wulfruna Co., of Wolverhampton. With regard to machines already listed by this firm, the chief alteration lies in the adoption of a sloping top tube, with tank to match, which will be supplied as an alternative to the dropped top tube frame if required. Minor modifications have taken place, but the all-black models fitted with 4 h.p. Blackburne or $2\frac{3}{4}$ h.p. Blackburne engines still retain their main features. Taking the former as typical, it will be remembered that Druid forks, B. and B. carburetter, Sturmey-Archer gear, $26 \times 2\frac{1}{2}$ in. Dunlop tyres, and straight chain stays, are incorporated. Wider guards are now fitted; the forks have been altered to suit. One new model will be fitted with the 350 c.c. J.A.P. engine, and another new model (which is not yet quite finished) will have a Villiers engine

fitted in a neat loop frame. This will retail at thirty-eight guineas, with direct

belt drive. All the countershaft models have chain and belt drive.

The 1922 lightweight Wolf fitted with J.A.P. engine and Sturmey-Archer gear.

PREPARING THE MACHINE FOR WINTER.

THE wise rider who keeps his machine until the spring, rather than sells it in the autumn, takes care at this season of the year to prepare it in such a way that it shall not suffer from use in the wet weather nor from the ill effects of standing in an oft-times damp or exposed shelter.

Such preparations are simple, and need not occupy more than one or two evenings or an afternoon at the week-end. First, the machine should be cleaned down thoroughly, removing all mud, dust, and oil. The bright parts may then be cleaned with metal polish, while the appearance of the frame and tank can be enhanced to an extraordinary degree by

ADAPTABLE GAUNTLET GLOVES.
An excellent design by Messrs. Dunhills, Ltd.

treatment with one of the special wax polishes now so popular for furniture. After these preliminaries, two methods are open to preserve the condition of the machine until spring-cleaning time comes. The first and simplest—and in some ways the most effective—is to brush over the whole of the bright parts, the lower portion of the frame, the wheels, and the mudguards, with a thin cream of grease dissolved in petrol. The alternative is to carry this treatment out in the same way, omitting the larger plated parts, which may be coated with a transparent lacquer.

By either method the machine will remain in good order under the worst accumulations of winter mud.

To Club Secretaries about to plan their winter programme: see "Club News" page for particulars of "The Motor Cycle" film.

A New Sparkbrook Lightweight.

Villiers Engine, Loop Frame, and Pressed Steel Lugs.

A light and reasonably priced two-stroke—the Spark, a machine fitted with Villiers engine and flywheel magneto.

ONE of the most interesting lightweights which has yet been produced is the latest model Sparkbrook, to be known as the "Spark."

Primarily intended to be produced in quantities at a low figure, it is the frame construction which rivets attention. At first sight it would appear that a loop frame of normal construction is employed, but a closer scrutiny reveals many unusual features. To begin with, pressed sheet steel lugs are used throughout. Even the head lug, a particularly fine piece of work, is a one-piece pressing, welded at the edges of the webs. The main frame consists of the head, tank rail, and a loop member, to which stout pressed steel engine bearer plates are brazed. Bolted to the rear engine bearer plates are the chain stays, the back stays being detachable from both chain stays and seat tube. These stays have flattened ends, but are reinforced where the swaging takes place by stout inner liners of steel tube.

Head lug, tank fixing, and lubrication details.

Quite an unusual feature is incorporated in the stand, for this is so arranged that the light tubular legs receive the minimum bending stresses, since they lie directly between the chain stay and the ground when the machine is raised.

Two sheet steel straps position the legs, and one of these lies on either side of the rear fork-end lug, taking a bearing on the outside of the retaining bolt boss and not on the bolt itself. The front fork is of the well-known Triumph type in so far as it is pivoted at the bottom of the head lug, but plain bearings are employed on the pivots, a feature which is emphasised by the designer, who claims that the slight amount of friction at this point is beneficial in its damping action.

Planned for Production.

Both compression and rebound springs are fitted at the top of the fork, and the amount of pressure is adjustable. Before leaving the frame it should be mentioned that each side of the chain stays, back stays, and spring forks is identical, and this simplifies replacements as well as lowering production costs.

Footrests are carried from the engine plates, and on the cross-bar are mounted a pair of brake pedals, one on each side of the machine. These pedals operate Ferodo shoes in the belt rim, one being placed above the chain stay and one below.

All brake gear is arranged in such a manner as to clear a gear box and primary chain should such a device be fitted. The brake shoes also are inter-

Sparkbrook engine plate and rear brakes.

changeable, and a single return spring suffices for both brakes.

Again composed of pressings, the tank is of tubular section, with a recess along the top to fit snugly round the tank rail; projecting lugs are formed at each end, which bolt up to the steel webs of the head and seat-pillar lugs.

Before joining up the two tank pressings, a steel bottle is inserted, and this serves to contain lubricating oil. The cap of this bottle is screwed down on to a leather washer, so as to be absolutely air-tight, and carries a ball non-return valve and an adapter to suit a normal tyre pump. A tap and sight-feed arrangement are fitted to the neck of the bottle. Thus, after filling up with oil, a few strokes of the tyre pump will supply sufficient pressure to empty the tank of oil gradually when the tap is turned on. It has been found in practice that the oil compartment is so completely air-tight that, even after several days, or even weeks, no diminution of pressure is traceable.

Low Price.

Fitted with the well-known Villiers two-stroke engine and flywheel magneto, the little machine will sell at thirty-eight guineas, with direct belt drive. At this attractive price the machine is thoroughly well equipped, 26x2½ in. Dunlop tyres being fitted. Sensible mudguards, a sturdy little carrier, and good quality saddle are included in the specification, and the finish is black, with Sparkbrook green tank and flywheel cover.

The well-known Sparkbrook lightweight models will continue to be sold either with single gear, two-speed, or two-speed and kick starter; and, in addition, a new model fitted with the 350 c.c. J.A.P. engine and a three-speed gear will be listed.

200 MILES AT SPEED.

THE 200 Mile Race at Brooklands last week-end showed that the 1,100 c.c. four-wheelers have not yet attained the speeds of the 1,000 c.c. solo motor cycles. In the 500 mile motor cycle race last July the 200 mile record was broken on a 7-9 h.v. machine, the average

speed being 74.34 m.p.h. In Saturday's race the fastest four-wheeled cycle car, with a 90° overhead valve twin cylinder engine of 1,100 c.c. capacity, averaged 71.54 m.p.h.

It was unfortunate in this race that the other machines of cycle car type did

not approach the speed of the winner, as, of course, the old saying that "one swallow does not make a summer" holds good, and it must be recollected that the winning cycle car was a highly specialised machine specially designed for events of this kind.

Average of 71.54 m.p.h. for 200 Miles.

G.N. Cycle Car's Success in Great Race at Brooklands.

HUNDREDS of motor cyclists were intermingled with the record crowd at Brooklands last Saturday, the occasion being the magnificently organised 200 miles race of the Junior Car Club. The event was divided into two classes, (1) for 1,500 c.c. cars and (2) 1,100 c.c. cycle cars. A graphic description, with many exclusive illustrations, appears in to-morrow's issue of *The Autocar*. The race started at noon. Taking the lead in the 1,100 c.c. class from the start, a Morgan with water-cooled J.A.P. engine having side-by-side valves and driven by E. B. Ware led for nineteen laps at a very hot pace. On the twentieth circuit he retired with a broken propeller-shaft. This let Fraser Nash on a twin-cylinder four valve G.N. into the leading place temporarily, as he was hotly pursued by Lombard (the cycle car Grand Prix winner) on a four-cylinder Salmson and Phillips on a four-cylinder water-cooled Deemster, who alternately led at intervals up till the fortieth lap. Lombard, who won the half-distance prize, made one mistake, which cost him several minutes. Near his depot he suddenly decided to pull up for replenishments, and, applying his brakes violently, caused the car to skid suddenly and ram the depots, which buckled his front wheels. No other damage being done, the wheels were changed and the race continued, but this unexpected incident robbed the 1,100 c.c. class of much interest.

Nash continued his regular lap speeds of about 72 m.p.h.; and, taking the lead at forty laps, never lost it again, accomplishing a non-stop run, his time being 2h. 49m. 24³/₄s. for the seventy-three Brooklands laps, i.e., 201 miles 1,728 yards—an average of 71.54 m.p.h. Second

A. G. Fraser Nash (8.7 G.N.), winner of the 1,100 c.c. class, overtaking W. H. Oates (10 Lagonda) in the 200 miles light car race at Brooklands. Nash's speed was 71.54 m.p.h.

to finish was André Lombard on the Salmson in 2h. 56m. 23¹/₄s.; and third, W. H. J. Phillips (Deemster) in 3h. 0m. 40s. Nash told us that he used six gallons of petrol on his G.N., and two and a half gallons of oil during the race. Except for the engine, which has four overhead valves operated by an overhead camshaft driven by bevel gearing, the winning G.N. is of standard type. His final lap was at the rate of 77.45 m.p.h.

A Coventry-Premier was fourth in 3h. 38m. 3s., and an A.V. but 4¹/₄s. slower.

The 1,500 c.c. class was won by H. O. D. Segrave on a Talbot-Darracq at 88.82 m.p.h., second and third positions being occupied by small cars of the same make driven by K. Lee-Guinness and Malcolm Campbell respectively. Detailed results will be found in *The Autocar* Buyers' Guide Number on sale all over the country to-morrow (Friday).

A Four-wheeled Sidecar Substitute.

FOR a long time past Messrs. Ward and Avey, of Teddington, the manufacturers of the A.V. monocoque, have been experimenting with a two-seated cycle car, but forebore to make any public announcement until the design had been thoroughly tested, and production was actually in progress. We have now tried the little car on the road, and prophesy

that at the extremely low figure of £155 it should prove a sturdy rival to the sidecar.

In general specification the machine bears a strong family resemblance to the A.V. monocoque, but the track has been widened sufficiently to accommodate a body 30in. wide, which, in conjunction with an 8in. stagger of the seats, permits

two average people to be carried in real comfort. The engine is an 8 h.p. J.A.P. mounted at the rear, and additional cooling is provided by a rotary-blower, driven by belt. Buyers may choose between a three-speed Sturmey-Archer gear box or the firm's own epicyclic gear, which affords only two forward speeds, but has a reverse.

The new two-seated A.V. runabout, which has a slightly wider track than the monocoque.

Ackermann steering has now been adopted and the shock absorber improved.

**Sutton Coldfield and North Birmingham A.C.**

On Saturday the club will hold a closed reliability trial for the Sutton and Shell Cups (for best solo and sidecar performances respectively).

Blackpool and Fylde M.C.

A most successful dance and prize distribution was held at the Savoy Hydro on a recent Friday evening. The annual general meeting of the club will be held on November 4th.

Worcester and District M.C.C.

Next Saturday a closed sporting trial will be held for the President's Cup, the Eric Williams Cup, and other awards. The route will cover some new ground in Wales.

Oxford University M.C.C.

Reorganisation is taking place, and a new secretary, the Rev. M. P. Sargent, St. Edward's School, Oxford, has been appointed. Novices as well as experts will be catered for in future; and, as a start, handicap speed trials will be held on Saturday next.

Hinckley and District M.C.C.

Although rather late in the year, the recent formation of a club as above has met with distinct success. The membership approaches forty, and a programme for 1922 is being commenced upon immediately. Mr. H. A. Gutteridge, 72, Rugby Road, Hinckley, has been appointed hon. secretary and treasurer.

South Birmingham M.C.C.

To-morrow the club is entertaining the delegates of the fourteen affiliated motor cycle clubs of the A.C.U. Midland Centre; and, in connection with this function, a smoking concert will be held to which all club members and friends are invited, ladies especially. It will be held at 7.30 p.m., at the club's headquarters, the Mermaid Hotel, Stratford Road, Sparkbrook.

Week-end Club Events

Oct. 29.—Worcester and District M.C.C. Sporting Trial.
Oct. 29.—North London M.C.C. Theatre Night.
Oct. 29.—Stourbridge and District M.C.C. Paper-chase and Social Evening.
Oct. 29.—Sutton Coldfield and North Birmingham A.C. Closed Reliability Trial.
Oct. 30.—Barrow and District M.C. Speed Trials.
Oct. 30.—Halifax and District M.C.C. Run to Brown Cow.
Oct. 30.—Rochester, Chatham, and District M.C. and L.C.C. Run to Mayfield.
Oct. 30.—Birmingham University M.C.C. Reliability Trial.

Exeter M.C. and J.C.C.

With the object of raising funds for the ensuing year, the club is holding a novel fuel consumption guessing competition next Saturday. A 4 h.p. solo machine will be driven from a certain point at approximately 20 m.p.h., with exactly one pint of petrol in the tank. The competitors' task is to estimate the exact distance the machine will run.

Bradford M.C. and L.C.C.

There were twenty solo and fourteen sidecar entries for the annual hill-climb for the Dyson Shield, which was held on Tong Hill on the 15th inst. Each class was run on the knock-out principle on handicap, the winner of each class then competing in the final for the shield, which, with gold medal, is held for one year. No final was necessary this year as H. Langman, the well-known Scott rider, won both classes. The semi-finals and finals in the classes were as follows:

SOLO.—H. Langman (3½ Scott) beat H. Askham (4 Norton); A. Mercer (3½ Scott) beat H. Holmes (3 A.B.C.); H. Longman (3½ Scott) beat A. Mercer (3½ Scott).

SIDECARS.—G. Townsend (3½ P. and M. sc.) beat W. Backhouse (3½ Triumph sc.); H. Langman (3½ Scott sc.) beat H. Holmes (3 A.B.C. sc.); H. Langman (3½ Scott sc.) beat G. Townsend (3½ P. and M.).

Ilkley M.C. and L.C.C.

A large number of spectators followed with interest the speed trials held on the 15th inst. It was a most successful event, with a good number of entries, held in perfect weather conditions, and along a fine road surface, the course being a third of a mile. Two Scott riders (C. P. Wood and H. Langman) both achieved a speed of 83.33 m.p.h.; and C. P. Wood had been placed first on taking the aggregate speeds in the various events in which the two riders had taken part. Since the decision had been announced, however, there had been further conversation on the subject, and it had been mutually agreed that C. P. Wood should take the cup and gold medal for the best improvement on handicap time, and that H. Langman should take the Sellars gold medal for the fastest time. The results, rendered specially interesting by the inclusion of all speeds, are as follows:

SOLO MACHINES.

350 c.c.—1 and bronze medal, J. Stansfield (2½ Edmund), 56.07 m.p.h.; 2, L. A. Runton (2½ Velocette), 54.05 m.p.h.

550 c.c.—1 and silver medal, C. P. Wood (3½ Scott), 83.33 m.p.h.; 2 and bronze medal, H. Langman (3½ Scott), 78.94 m.p.h.; 3, A. Jackson (3½ Norton), 73.17 m.p.h.; 4, A. Fieldhouse (3½ Norton), 73.17 m.p.h.; 5, H. W. Sellers (3½ Sunbeam) and J. Duxbury (3½ Scott), 66.21 m.p.h.; 6, J. H. Holmes (3½ Scott), 62.5 m.p.h.; 7, W. Backhouse (3½ Triumph), 60 m.p.h.; 8, J. Midgley (3½ Triumph), 56.07 m.p.h.; 9, E. C. Caswell (3½ Triumph), 55.05 m.p.h.

750 c.c.—1 and bronze medal, C. P. Wood (3½ Scott) and H. Langman (3½ Scott), 81.08 m.p.h.; 2, A. Jackson (3½ Norton), 73.17 m.p.h.; 3, A. Fieldhouse (3½ Norton), 69.77 m.p.h.; 4, H. W. Sellers (3½ Sunbeam), 68.96 m.p.h.

1,000 c.c.—1 and bronze medal, H. Langman (3½ Scott), 83.33 m.p.h.; 2, C. P. Wood (3½ Scott), 82.19 m.p.h.; 3, A. Jackson (3½ Norton), 72.28 m.p.h.; 4, W. Bradley (7-9 Indian), 63.16 m.p.h.

SIDECARS.

1 and bronze medal, H. Langman (3½ Scott) 68.18 m.p.h.; 2, J. N. Longfield (7-9 Indian sc.), 65.21 m.p.h.

TO CLUB SECRETARIES.

"The Motor Cycle" Film will shortly be available for loan to enterprising clubs who are keen to make their winter social events a success. This exclusive film takes about forty minutes to exhibit, and the programme includes scenes at the Junior and Senior T.T. Races, the 500 Miles Race, the Six Days Trials, and the Grand Prix Car Race. Club secretaries should write to the Editor (Film Department), "The Motor Cycle," Coventry, suggesting two or three alternative dates after the Olympia Motor Cycle Show.

**ON AXE EDGE, NEAR BUXTON.**

J. Whalley (2½ h.p. Massey-Arran) in the recent Stockport and District M.C. Open hill-climb. Whalley, it will be recalled, came very near to winning this year's Junior T.T. race.

Club News—

Surbiton and District M.C.C.

F. C. Townshend (8 Zenith) and R. H. Chaplin (3 A.B.C.) are now announced as additional gold medallists in the Sopwith Cup Trial described last week. R. S. Spikins (3 A.B.C.) made a non-stop run.

Cumberland County M.C.C.

A series of interesting lectures, all starting at 8 p.m., at the Crown and Mitre Hotel, Carlisle, will be held on November 5th, November 25th, December 17th, January 14th, and February 11th. The first, on the subject of "Road Traffic," will be given by Mr. E. H. Spence, with Mr. W. T. Carr, M.P., in the chair.

Midland Cycling and Athletic Club.

Results of the one-day trial, described last week, were very promptly announced last Thursday. W. B. Gibb (3½ Douglas) gained the premier award—the M.C. and A.C. Trophy—and, as anticipated in our report of the event, B. Kershaw (2½ New Imperial) won the "Gowch" Trophy for the best performance by a 350 c.c. machine. Other awards were:

JORDISON TROPHY (best passenger machine).—J. J. Gave (3 G.N.).
TRADE TROPHY (best solo machine over 500 c.c.).—Cliff Atcherley (4 Triumph).
B.N.J. BOWL (best solo machine over 350 c.c. and under 500 c.c.).—W. B. Gibb (3½ Douglas).

BEST CLUB PERFORMANCE on a solo machine.—J. Doherty (2¼ Lewis).
BEST CLUB PERFORMANCE on a passenger machine.—L. Newey (8 Ariel sc.).
WINNING TEAM.—T. F. Blumfield (6 Ariel), C. Atcherley (4 Triumph), and J. Doherty (2¼ Lewis).

GOLD CENTRE MEDALS.—As above, and F. Morgan (2¼ Cotton), G. Masoo (2¼ Connaught), A. Milner (2¼ O.K.), G. Butcher (3½ Sunbeam), T. Richards (4 Triumph), A. Rollason (3½ Ariel), H. F. S. Morgan (8 Morgan), F. H. Brown (4 Rex sc.), F. C. Parkes (2½ Sun V.T.S.), and J. Walker (6-7 B.S.A.).

SILVER MEDALS.—E. Neal (2½ Metro-Tyler), A. Kipling-Smith (2¼ Morris), E. F. Goodman (2¼ Velocette), G. P. Povey (2¼ Velocette), W. L. Handley (2¼ O.K.), J. Lidstone (2¼ James), M. Bishop (2½ Sun V.T.S.), C. L. Sprosen (2¼ Connaught), G. Hill (2¼ Diamond), F. Begley (4 Indian), R. Duke (4 Triumph), W. Danskie (3½ Rudge), P. Sibley (3½ Rudge), W. T. Woodcock (3½ Ariel), P. A. Watson (3½ Sunbeam sc.), B. Bladder (8 New Imperial sc.), W. H. Carr (8 Morgan), R. Beasley (3½ Sunbeam sc.), and S. Lewis (6 B.S.A. sc.).

As S. W. Lewis's name did not appear on the official programme, we inadvertently omitted to credit his 6 h.p. B.S.A. sidecar with a clean ascent of Bussage Hill.

Taunton and District M.C. and L.C.C.

The second trial to Land's End this season was held on Saturday, October 8th, and from every point of view was an unqualified success. The weather was glorious, and, with two exceptions, all the competitors reached Land's End. A new freak hill, Warren Hill, was discovered near Honiton, and a deviation

was made from the main road to include this hill, and also a couple of water-splashes immediately preceding it. A feature of the run was the admirable way in which a 2½ h.p. O.K. and sidecar negotiated the hill after 6 h.p. outfits had failed. The performance of this miniature outfit was considered to be the gem of the trial. A 2½ h.p. Cedros and sidecar also covered the route. Awards are announced as follows:

TRADERS' CUP.—Cup and first-class certificate, G. L. Morrish (3½ Sunbeam). First-class certificate, 100½ marks, L. E. Anderson (2¼ Connaught). Second-class certificate, 90½, S. H. Crowhurst (3½ Martinsyde), 295; P. V. Hare (3½ Douglas), 205; P. Skinner (6 Martinsyde and sc.), 280; and D. Merson (2¼ Ready), 270. Third-class certificate, F. Gardner (3½ Scott), 255; S. Goodman (3½ Sunbeam), 230.

CHALLENGE BOWL.—The Autumn challenge bowl, value £15 15s., presented by Mr. F. Hewins, and silver medal. In this competition five competitors tied: V. Tucker (3½ Norton), F. G. Vincent (3½ Sunbeam), G. L. Morrish (3½ Sunbeam), C. G. Clapham (3½ Douglas), and J. Eddy (4½ Excelsior).

TEAM CHALLENGE CUP.—Challenge cup for teams, presented by Mr. H. T. Kite. The Taunton team, consisting of P. V. Hare (3½ Douglas), S. W. Easton (3 A.B.C.) and F. Heal (4 Norton sc.), 895 marks.

Lightweight Machines.—1 (equal), I. F. Anderson (2¼ Connaught) and W. L. Handley (2¼ O.K.), 300 marks each; 2 (equal), J. Wraight (2¼ O.K.) and D. Merson (2¼ Ready), 290 marks each.

Solo, over 350 c.c.—1, S. W. Easton (3 A.B.C.); 2, S. H. Crowhurst (3½ Martinsyde). Sidecars.—1, J. Eddy (4½ Excelsior sc.), 300; 2, L. S. Potter (6 Martinsyde sc.), 300.

Last Open Hill-Climb of 1921.

Keenly Contested Event of the Stockport Club at Axe Edge.

SEVERAL well-known riders attended the last open hill-climb of 1921, the Stockport and District M.C. event on Axe Edge on Saturday, the 15th inst.

H. W. Hassall (3½ Norton) made fastest time of the day, winning all the four classes which he had entered. E. Searle (3½ Sheffield-Henderson) and C. P. Wood (3½ Scott) were usually second and third respectively in the "general" solo classes. Other conspicuously successful riders were: G. Cowley (3½ Norton sc.), F. Hatton (3½ Douglas sc.), J. C. Nichols (2¼ Omega), and E. W. Wilkinson (3½ Sunbeam).

SIDECAR CLASSES.

550 c.c., GENERAL.—1, G. E. Cowley (3½ Norton sc.), 2, E. Searle (3½ Sheffield-Henderson sc.).

550 c.c., EXPERTS BARRED.—1, F. Hatton (3½ Douglas sc.), 2, B. Caldwell (3½ Norton sc.).

750 c.c., GENERAL.—1, G. E. Cowley (3½ Norton sc.), 2, P. Platt (6 Bradbury sc.).

750 c.c., EXPERT BARRED.—1, F. Hatton (3½ Douglas sc.), 2, P. Platt (6 Bradbury sc.).

1,000 c.c., GENERAL.—1, G. E. Cowley (3½ Norton sc.), 2, E. Searle (3½ Sheffield-Henderson sc.).

1,000 c.c., EXPERTS BARRED.—1, P. Platt (6 Bradbury sc.), 2, F. Hatton (3½ Douglas sc.).

UNLIMITED GENERAL.—1, E. Searle (3½ Sheffield-Henderson sc.), 2, G. E. Cowley (3½ Norton sc.).

UNLIMITED, EXPERTS BARRED.—1, S. Brown (10 Reading-Standard sc.), 2, P. Platt (6 Bradbury sc.).

SOLO CLASSES.

250 c.c., GENERAL.—1, J. C. Nichols (2¼ Omega), 2, N. B. Newton (2¼ New Imperial).

250 c.c., EXPERTS BARRED.—1, J. C. Nichols (2¼ Omega), 2, N. B. Newton (2¼ New Imperial) and R. Taylor (2¼ Lewis) tied.

350 c.c., GENERAL.—1, J. Whalley (2¼ Massey-Arran), 2, B. Watts (2¼ Dot).

350 c.c., EXPERT BARRED.—1, B. Watts (2¼ Dot), 2, J. Whalley (2¼ Massey-Arran).

400 c.c., GENERAL.—1, J. Whalley (2¼ Massey-Arran), 2, B. Watts (2¼ Dot).

400 c.c., EXPERTS BARRED.—1, J. Whalley (2¼ Massey-Arran) and B. Watts (2¼ Dot) tied; 3, E. Bates (3 A.B.C.).

550 c.c., GENERAL.—1, H. W. Hassall (3½ Norton), 2, E. Searle (3½ Sheffield-Henderson).

550 c.c., EXPERTS BARRED.—1, F. Hatton (3½ Douglas), 2, B. Watts (2¼ Dot).

750 c.c., GENERAL.—1, H. W. Hassall (3½ Norton), 2, G. E. Cowley (3½ Norton).

750 c.c., EXPERTS BARRED.—1, E. W. Wilkinson (3½ Sunbeam), 2, F. Hatton (3½ Douglas).

1,000 c.c., GENERAL.—1, H. W. Hassall (3½ Norton), 2, E. Searle (3½ Sheffield-Henderson).

1,000 c.c., EXPERTS BARRED.—1, F. Hatton (3½ Douglas), 2, C. Waterhouse (3½ Sunbeam).

UNLIMITED, GENERAL.—1, H. W. Hassall (3½ Norton), 2, C. P. Wood (3½ Scott).

UNLIMITED, EXPERTS BARRED.—1, E. W. Wilkinson (3½ Sunbeam), 2, F. Hatton (3½ Douglas).

HILL-CLIMB FOR SECOND-HAND MACHINES.

IN connection with the Glass Automobile Show of second-hand vehicles at Manchester, which opens on November 5th, Sir Robert Peacock, M.V.O., the Chief Constable of the city, has given permission for a hill-climb test of the

vehicles entered to take place on Stoney Brow, close to the City Hall. The trial of the first cars and motor cycles will take place on October 29th; later entries will undergo their hill test as they arrive on October 31st, November 1st, 2nd, and

3rd. There will be no hill-climbing on November 4th; but vehicles arriving after this day will be tested and examined. Mr. William Glass, the organiser of the exhibition, has transferred his offices to the City Hall, Manchester.

SIMPLICITY IN FRAME CONSTRUCTION.

SEVERAL makers have lately been considering the merits of a frame construction eliminating brazing. The design illustrated (provisional patent 9,216, 30/3/20) attains this end in rather a novel manner, and at the same time is perfectly triangulated.

Seven pairs of double-butt tubes of D section are simply bolted together with suitable lugs at the steering head and rear fork ends. Engine plates are dispensed with, the engine being attached directly to the frame by means of bolts

through three transverse lugs cast on the crank case in suitable positions, the crank case, of course, giving rigidity to the whole.

There are five pairs of tubes connected to a common transverse bolt just below the saddle, but should any slackness occur at this point the rider is at once warned by movement in the seat-pillar, which is mounted in a clip, which is tightened by the same bolt.

Mr. C. Denison, 29, Oddfellow Street, Blackpool, is the designer of this interesting frame layout.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

SILENCERS AND THE LAW.

? Is it legally necessary actually to have an exhaust box or silencer, or is a long exhaust pipe past the back hub allowed by itself, such as is fitted to many "sports models"?—E.H.B.

The regulations regarding silencers are rather vague. The legal requirement is that a machine shall be reasonably silent (it being specified that the exhaust gases shall pass through an expansion chamber or other "suitable apparatus"). In many cases, however, the fitting of a long exhaust pipe alone is regarded as an infringement of these regulations, and numerous riders have been successfully prosecuted by the police on this account, even though their machines were fairly quiet.

MAGNETO QUESTIONS.

? A Thomson-Bennett twin magneto in my possession gives a good spark when it is off the machine, but when I put it on the engine I get practically no spark at the plug, and if I put my hand on the cylinder or armature driving spindle a shock is felt. I have cleaned every part and adjusted the platinum points etc. In the aluminium base plate of the magneto there is a carbon brush rubbing on one end of the armature, independent of the one on the platinum points, and the two rubbing on the distributor ring. I should be very glad if you could tell me the cause of my trouble; also, if you could explain the working of the magneto; also if it is possible to alter a 50° magneto to a 60°, and the best way of doing it.—F.A.C.

It is very difficult to tell you the cause of the trouble without actually subjecting the magneto to test. We suspect, however, that there is a fault in the winding, and it would be best to send it to the makers and allow them to test it for you. An explanation of the working of the magneto cannot possibly be given in a short space, and we would suggest that you obtain "Motor Cycles and How to Manage Them," which contains a most complete chapter devoted to high-tension ignition. "Magneto" (by A. P. Young), also issued by our publishers, deals still more fully with the subject. It may be possible to alter the magneto as you suggest, but it would be best to obtain the makers' advice on this point.

REPAIRING A TANK.

? How does one mend a hole (not a split) in the top of the petrol tank without having the tank down? The machine is a B.S.A., and the leak occurs round the petrol tap on top of the tank, as the securing collar has become unsoldered.—L.R.O.

It will be necessary to resolder the collar of the petrol valve, and if you intend doing this without removing the tank from the frame, you must take particular care that all petrol and petrol vapour is withdrawn before commencing operations, otherwise you may cause an explosion, with possibly disastrous results, not only to the tank, but to yourself.

Important Dates.

Fri., Nov. 4th, to Sat., Nov. 12th—
Automobile Exhibition, Olympia and
White City. (See "The Autocar.")

Sat., Nov. 5th—Midland Centre A.C.U.
Open Reliability Trial.

Mon., Nov. 28th, to Sat., Dec. 3rd—
The Olympia Motor Cycle Show.

Sat., Dec. 3rd to Tues., Dec. 13th—
Brussels Show.

Mon., Dec. 26th, Tues., Dec. 27th—
M.C.C. London-Exeter London Trial.

Sat., Dec. 31st.—N.W. London M.C.C.
Twelve Hours Open Winter Trial.

Fri., Jan. 27th, to Sat., Feb. 4th, 1922—
Scottish Car and Motor Cycle Show.

Oversize Tyres.

? Some time ago in an article by one of your staff, the writer mentioned that he had fitted a 28×3in. tyre to the rear wheel. The tyre makers do not recommend the fitting of this size, and the largest they quote for this rim is 26×2½in. for 2½in. rim. Will you please say whether (1) In your opinion it is satisfactory to fit a 28×3in. to these rims, and (2) whether there is any danger of this tyre coming adrift?—F.J.C.

(1.) It is quite satisfactory to fit such a tyre—in fact, several members of our staff have followed the practice, which was initiated by D.R.'s during the war, and have obtained every satisfaction. (2.) There appears to be no danger of the tyre coming adrift, but security bolts are advisable.

RESPONSIBILITY OF INNKEEPERS.

? (1.) When on a tour and stopping at an hotel for the night, if the motor cycle is handed over to the person in charge of the hotel garage, is the proprietor responsible for theft of the machine or not? (2.) What is a good means of securing the motor cycle from theft on ordinary occasions?—E.M.

(1.) If a person actually becomes the guest of an innkeeper, the latter (under the Innkeepers' Act) becomes responsible for the guest's personal property up to the value of £30; this amount does not include carriages (which includes motor cycles, of course), and the innkeeper's liability as regards these is unlimited. In many cases, however, you will find that hotel garages are under separate proprietorship, and the garage usually disclaims responsibility for loss by fire or theft. (2.) The best means of securing the machine is to lock either the wheels or the gear control mechanism with a suitable locking device, such as most accessory dealers can supply. In some cases it is possible to put the machine out of action by removing the high-tension wire or an essential part of the contact breaker, etc.

MISFIRING OF TWIN-CYLINDER.

? At times my 5-6 h.p. Clyno will fire quite all right on both cylinders, then sometimes the front one will stop, leaving the back firing alone, and vice versa. I have it timed back piston on top, exhaust valve just closing with magneto (Dixie) just breaking. Is the timing correct? What do you suggest is the cause of the trouble? I find the engine runs on both cylinders much better if I run without any air.—W.L.

We do not quite follow the method by which you have timed your engine. The exhaust valve should be just closing when the piston reaches the top of the exhaust stroke and one full revolution after this point (that is, at the top of the compression stroke) the contact breaker points should be just separating when the ignition control is two-thirds retarded. Perhaps there is some structural defect of the magneto, which your letter does not make clear; but, if closing the extra air eliminates the misfiring to a degree, we suspect that there are bad air leaks at either or all of the following points: Inlet valve guides, valve caps, and induction pipe joints.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"E.D." (Farnham).—5 h.p. N.U.T.: Speed, consumption, comfort, reliability (including Magdyno equipment), solo and sidecar; also similar experiences of Indian Scout.

"T.K.T." (Bootle).—4½ h.p. B.S.A.: Chain drive, climbing, power, reliability, speed, consumption and tyre life.

"L.W.E.H." (Bexley Heath).—Wates electric conversion set for acetylene lamps: Light given, duration of light on one charge, life of cells, convenience and accessibility of cells for recharging; retention of acid.

"G.E.S." (Shirley).—28×3in. tyres and Cox Atmos carburettor on 4 h.p. Triumph.

"R.J.S." (Oxford).—Economy effected by W.S.R. adapter on Amac fitted to a 3½ h.p. single.

"C.C.T." (Elgin).—W.S.R. and Bowden extra air on 7 h.p. James, or similar machine.

"G.N." (Leicester).—Beardmore-Precision spring frame: Climbing, consumption, gear handling, effect of pillion rider.

RECOMMENDED ROUTES.

OWER TO DORCHESTER.—T.G.

Ower, Cadnam, Ringwood, Wimborne, Bere Regis, Dorchester.

LONDON TO SOUTHSEA.—D.A.K.

Hammersmith Broadway, Kingston-on-Thames, Esher, Ripley, Guildford, Godalming, Milford, Hindhead, Liphook, Petersfield, Horndean, Cosham, Portsmouth, Southsea.

Found on the Road.

A rear stand was found near the "Cat and Fiddle" (Macclesfield-Buxton road), on October 9th, by Mr. W. Riseley, 25, Turnock Street, Macclesfield.

Coulson-B. Machines and Spares.

Coulson-B. machines and spare parts are being handled by Mr. R. C. Empson, of 15, Woodstock Street, London, W.I. It is understood that parts will shortly be manufactured in Birmingham.

Trials Amendments.

In the recent Reigate, Redhill and District M.C.C. consumption test the following corrections have been received: First sidecar E. P. Duplock (8 Sunbeam sc.), and first solo machine R. Green (3½ Sunbeam).

G. Baxter, who gained the highest marking on points in the N.W. London M.C.C. gymkhana, on the 1st inst., rode a 6 h.p. Martinsyde sidecar.

Prices for 1922.

Royal Ruby prices for the Olympia Show and the next year are announced as follows: 2½ h.p. sports model, £75; ditto, touring model, £77 10s.; 3 h.p. spring frame, £99 10s.; 2½ h.p. sports sidecar outfit (three-speed), £100; 3 h.p. light touring outfit (three-speed), £115; 8 h.p. spring frame outfit with Easting and spare wheel, £185.

Record-breaking Equipment.

On the last occasion on which Victor Horsman broke the fifty miles and one hour record on a 3½ h.p. Norton he used a Sturmey-Archer gear box.

The Bedelia Again.

The sole agency for the British Empire of the Bedelia cycle car has been secured by Palmer's Garage, 183-199, High Street, Tooting, London, S.W.17.

A Belgian Champion.

Our Belgian contemporary *La Moto-cycliste* awards a "Brassard of Honour" for the best trade rider in the country; it is awarded to the one gaining the highest aggregate number of points to the various speed tests and reliability trials throughout the year. For 1921 the award has been made to M. Antoine, of Liège, who rides a Triumph. This rider's latest success was at a combined hill-climb and speed test at Hainaut, where he attained a speed of 77 m.p.h.

Ex-W.D. Tyres.

In order that we might see for ourselves the condition of ex-W.D. and cheap clearance line tyres, we were invited by a large wholesale firm, which distributes these covers throughout the trade, to inspect its stock. We found several thousand motor cycle covers of all sizes, makes, and types carefully stored in darkened rooms. Most of the stock had come from the R.A.S.C. Tyre Depot at Camden Town, while others were clearance stocks of manufacturers who had given up the making of motor cycle covers. We handled and examined a great number of these covers selected at random, and gained the impression that many real bargains could be obtained among stock of this nature.

IN SURREY LANES.

Competitors in the Surbiton and District M.C.C. Sopwith Cup Trial (described last week). (Left) W. H. D. Steer (8 Zenith sidecar) on Bexley Hill. (Right) Another scene on Bexley Hill. W. R. Preston (3½ Sunbeam), followed by J. L. Boxall on a 3 h.p. A.B.C.

- Practical Insurance -

—An Interesting Scheme—

IT is the common experience of motor cyclists at some time or other to find their machines out of action. In the majority of cases the cause is trivial in itself and could be instantly rectified if one only had the necessary spare part.

What is more aggravating, in response to your S.O.S. call than to receive from an agent either a note of regret that he has not the part in stock or a polite request for cash in advance.

YOU WANT THE GOODS. NOT EXCUSES OR REQUESTS FOR CASH.

For many years Godfrey's have placed a service organisation at the disposal of its customers which obviates these irritating delays and which, if we can judge from an ever-growing testimonial file, gives entire satisfaction.

Briefly it is this: you enter your name and address on our spare parts register and open a Deposit Account with us. The minimum deposit is 10/-, but larger amounts can be sent if desired. There are no conditions whatever and any deposit is returnable in full on request.

Against your name on the register is entered particulars of your machine and a number. The advantage of this is that in any telegram, telephone message, or letter, applying for spare parts, and giving the name and number, we can identify the machine they are required for and send the right parts at once.

Where possible the registered customer is supplied with a priced spare part list, so that for expensive replacements he can remit the exact amount with his order, whilst for small requirements the order is executed against the Deposit Account whether it exceeds it in value or not. **Efficient and immediate service rather than a red tape adherence to rules being the essence of the scheme.**

It is obviously impossible for the individual rider to guard against any and every emergency by carrying replacements for every part of his machine, but this is precisely the business of one of the departments of Godfrey's. In the course of a long experience we have identified to a very large extent the nature and proportion of spares it is essential to carry to ensure an efficient Spare Parts Service Depot.

At the present time we are holding a very complete and comprehensive stock of the following spares:

B.S.A. SCOTT INDIAN LEVIS

while in addition to a well organised accessory store, including tyres, lamps, complete electrical equipment, chains, belts, etc., etc., our Spares Depot carry complete replacements for the following components:

**BURMAN COUNTERSHAFT GEAR
SENSPRAY CARBURETTER.**

If you would like us to include your name on our Register write for Form S.A. By doing so you will ensure against delays and disappointments when next you are in urgent need of any particular Spare or Accessory.

BELDAM

All British

Cost Less—last longer

BELDAM TYRES have most rubber where it is 'most needed—hence long mileage.

But you get more than mileage: the Beldam design of tread assures a steady grip on the road, and less puncture-liability. And they cost less! More mileage, more safety, more satisfaction—for less money! Ask a user.

Booklet "Testimony" sent free on request.
Write to-day. Or send a trial order.

BELDAM RETREADS

Don't throw an old cover away—it may be worth retreading! No matter what make it is, send it to us, and, if the canvas is sound, we will quote cost of making it good for several thousand extra miles by renewing with a BELDAM RETREAD.

THE BELDAM TYRE CO. (1920), LTD., BRENTFORD, MIDDLESEX.

I AM "IMPY"—this, my pet name, will do for the moment. I am a 4 h.p. 550 c.c. single cylinder motor cycle.

You will have an opportunity of seeing me at Olympia. I am the product of a well-known motor cycle factory, with years of experience. There is nothing flash about me, no frills, just a good sound proposition on accepted lines. My performance, however, is remarkable, a real dual purpose mount, a-go-anywhere-you-please machine. I have been on test some months now, and you ought to know all about it. I am not what the boys call a speed mount exactly, but yet I am a sporting solo, and I pride myself in touching 60 miles per hour solo, and 50 miles per hour with sidecar and passenger. I have done 300 miles in the day, and been just as fit and fresh at the finish as when I started. I have tried conclusions with machines for which I have the greatest respect—and left them behind. I have climbed hills with sidecar and passenger hitherto unclimbed by single cylinder combinations, and I am still undisturbed and looking forward with pleasure to finding a hill I cannot climb. In the meantime be guided by me, send a postcard so that full information may be sent to you later. My price is right.

—"IMPY," care of *The Motor Cycle*.

In answering these advertisements it is desirable to mention "*The Motor Cycle*."

GLASS' AUTOMOBILE

and all leading booksellers and bookstalls.

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—First 12 words 3/—, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **ILIFFE & SONS Ltd.**, and crossed **& Co.** Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 1/4. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

A.B.C.

A.B.C., perfect, lamps, horn, speedometer; £70.—24, Geraldine Rd., Chiswick. [5991]

- DOUGLAS Combination for lightweight and cash, or sell £80.—Jeanes, Crowthorne, Berks. [5391]
- 1920 N.U.T. (see under N.U.T.) for Zenith or Scott.—Woods, St. Romans, Worthing. [5934]
- EXCHANGE Zenith (see For Sale) for spring frame solo.—13, Westmoorland Rd., Barnes. [5592]
- £160.—Motor launch, exchange for good combination.—Ogilvie, 275, Crow Rd., Glasgow, W. [5416]
- 6-h.p. Combination (£85) for light car, about same price.—A. Edge, 53, Bridge St., Bolton. [X1158]
- A.J.S. 1920 Combination (as new), for Douglas or similar and cash.—59, High St., Clapham, S.W. [5847]
- 8-h.p. Chater-Jap Combination, perfect, level for good solo; sell £40.—39, Commerce Rd., Wood Green. [5754]
- B.S.A. 1919 4 1/2 h.p. All-chain Combination for motor car suitable baker.—20, St. John's Rd., East Ham, E. [5356]
- EXCHANGE specially tuned 1914 Triumph for I.O.M. Rudge.—5, Park Terrace, Headinglev, Leeds. [5313]
- EXCHANGE Number 4-cyl. Van for combination, or sell £65.—Speckley, 86, Churchfield Rd., Acton, W.3. [5645]
- 1919 Indian 7-h.p., perfect condition, for late Sunbeam or Norton, or sell.—Price, Ashby, Scunthorpe. [5235]
- RUDGE Multi, 1921, speedometer, etc., for countershaft Norton or Triumph.—82, Caledonian Rd., N.1. [5878]

STANLEY BELTS AND FASTENERS.

MILLIONS ordered and in use by H.M. WAR OFFICE and our ALLIES.

A BOX OF STANLEY SPARES is a complete belt equipment outfit—the best and cheapest insurance you can effect against belt trouble on the road. It contains:

The STANLEY FASTENER with the BEND that NEVER BREAKS, the BEST at any price. Hardened & tempered hook and flanged pins.

The STANLEY SPARE LINK which is the best belt length adjuster yet invented. Saves time, trouble & money. Saves the cost of a new belt.

The STANLEY SHIELD, which protects the belt fastener, prevents wear of the pulley, and conserves power. Specially designed for use with the Phillips Pulley. 9d.

STANLEY ADJUSTING HOOKS, for adjusting the length of your belt in one second. Set of 3, 6d. "Never be without a box of Stanley Spares."

Price 3/6 post free. Send size of belt when ordering. The LION FASTENER, guaranteed for 5,000 miles.—11d.

Our Goods are World-renowned for their Reliability. A STANLEY FASTENER fits with each belt.

Stanley Motor Belts & Fasteners
BRITISH THROUGHOUT
(STANLEY WEBB, inventor of the Original Hook Belt Fastener and other Practical Belt Aids.)
BROMLEY, KENT.

EXCHANGE.

- £10 Cash and hot stuff T.T. Rover for best 3 1/2-h.p. countershaft offered.—Sealey, Princes Av., Watford. [5832]
- POWERFUL Ship's Glass; £3/10; exchange brazing lamp, vice.—Bacon, Bellevue, St. George Bristol. [5632]
- KINGSBURY 2 1/2 h.p., 2-speed, practically new, with cash, for Norton, Triumph.—3, Kidwouan Rd. Goodmayes. [5711]
- 1919 2 1/2 h.p. Douglas, 2-speed, good condition, for I.O.M. Rudge Multi.—S. Martin, Tarrant St. Arundel. [5671]
- SPECIAL o.h.v. J.A.P. Sporting Solo; exchange 1914 Scott; sell £36.—1, Elsieclene Rd., Windmore Hill. [5552]
- POTTERY, 2,000 pieces, exchange for combination or light car.—Brace, 66, Fenchurch St., E.C. Bank 624. [609]
- 1919 2 1/2 h.p. Clyno, 2-speed and cash for motor power or combination.—181, Neuton Rd., Ton-on-Trent. [576]
- TRIUMPH, fixed gear, cash, for 4h.p. Triumph 2-speed countershaft.—Tapscott, Mill Hill, Stomhouse, Glos. [551]
- EXCHANGE Auto-wheel, complete, for typewriter first-class order; or sell £8/10.—Cowlislaw Methwold. [5942]
- O.K. 4-stroke, M.A.C., Albion 2-speed, new condition, and cash, for heavier machine.—63, Solo Rd., Brixton. [5933]
- FURNITURE Manufacturer will exchange new good for motor cycle, good machine.—Box 7,026, c/o The Motor Cycle. [5332]
- 4 h.p. 1920 Triumph, 3-speed, perfect order, for Scott wanting overhaul, and cash.—Stebbins, Attleborough, Norfolk. [5942]
- 2 1/2 h.p. Precision Engine, complete unit, for 3 1/2 h.p. Triumph ditto, or sell £12/10.—Lyndale, Balaclava Rd., Surbiton. [5711]
- LIST 50 Car Bargains Free.—Combinations, motor cycles, etc., part exchange.—Douglas S. Cox, W. Norwood. See Cars. [5384]
- P. and M. Combination, perfect order, for lightweight motor cycle, or Ford chassis.—Marsh, Crippenham Green, near Slough. [5332]
- PREMIER 4h.p. Twin, 2-speed, clutch, valve £24 for lower power, cash adjustment.—150, Garside Lane, Wandsworth. [5711]
- ALLDAYS 12h.p. 2-seater, new condition, scratched, for 2-seater or water-cooled Morgan 63, Solon Rd., Brixton. [5933]
- 1911 Douglas, smart but wants timing, and light cycle, for higher power or 2-stroke.—J. Newm Alderholt, near Salisbury. [552]
- G.N. Popular, July, 1921, done 1,000, fully equipped for late Morgan or combination and cash.—Wadsworth Rd., Sheffield. [X12]
- DELAGE 2-seater, 1913, 10.4h.p.; any expert examination and trial; for first-class combination Ashley, Probus, Cornwall. [562]
- DOUGLAS 2 1/2 h.p., 1916, also 1919 sidecar Triumph preferred.—Thompson, 32, Clare Rd., Kentish Town, N.W. [562]
- EXCHANGE 2-speed Twin Coachbuilt Combination and new scooter for good Ford ton lorry.—96, c/o The Motor Cycle. [X12]
- 8-10h.p. w.c. J.A.P. Chassis, perfect, for good combination, or two solo machines.—J.A.P., 150, Anson Park Rd., Twickenham. [581]
- £15 and 22in. Chater-Lea Speediron, 1920 (or £10), for best make motor cycle offered.—Moore Park Rd., Fulham. [562]
- NEW Raleigh, 5-h.p., unriden, for lower power and cash, or sell £128; cost £147.—W. Ay Garage, Kensington Palace, W.8. [562]
- 1916 Premier, solo, countershaft, perfect, £40 off for Douglas or Villiers, flywheel mag.—Meeting House Lane, Peckham. [562]
- 1918 Renovated Countershaft Triumph, equipped, taxed; exchange lightweight and cash.—£65.—1, Othello St., Liverpool. [562]
- 1920 2 1/2 h.p. T.T. 2-speed New Comet, 5 gold m winner, for higher power or cycle car.—F. Hobson, Hill Lodge, Welwyn, Herts. [562]
- 1921 2 1/2 h.p. 2-speed Federal-Villiers, complete P.R.S. lamp, etc., as new, for heavier machine sell.—Box 6,970, c/o The Motor Cycle. [562]
- WANTED, Morgan or good 3-wheeler, for 1920 countershaft Zenith combination, fully equipped.—Glover, 4, Trinity Rd., Sheerness. [562]
- DOUGLAS, 1919, for 2-stroke and cash; Omega 1919, 2-speed, ditto, cash for combination.—Evers, Neuton Rd., Burton-on-Trent. [562]
- 1920 4h.p. Coulson B., 2-speed, fully equipped original tyres; any trial; exchange good combination.—Burrow, Colaton Raleigh, Devon. [562]
- 1921 Burney Cycle Car, 8h.p. Blackburne, 3-speed and reverse, for solo and cash.—45, Summerfield Crescent, Edgbaston, Birmingham. [562]

Quarterly Licences for Motor Cycles.

AS a result of continued agitation, the Ministry of Transport has, it is understood, agreed to issue quarterly licences for motor cycles in 1922. This decision will considerably ease the burden of taxation so far as users of the most economical type of motor vehicle are concerned, and form interesting reading to motor cyclists. As a matter of fact, the refusal of the Transport Ministry to grant quarterly licences for motor cycles when the new scheme of taxation was introduced has always remained unaccountable. Whilst acceding to the plea of organisations representing car owners who have all through 1921 been able to obtain quarterly licenses at a figure a little above one-quarter the amount of the yearly rate, motor cyclists had to pay the full tax, no matter when they registered their machines prior to October 1st. Abundant proof has been furnished to the authorities that this ruling adversely affected trade in motor cycles toward the end of the summer, and no doubt the decision is due to the pressure brought to bear from various quarters.

New regulations are shortly to be issued by the Ministry of Transport concerning these short-period licences, says *The Autocar*, and in view of the further concessions which are to be granted to car owners, it is sincerely to be hoped that at least equal concessions will be provided for motor cyclists. For instance, a sliding scale of taxation is proposed. Licences expiring on December 31st, if taken out in March, will cost 90% of the full annual figure, in April 80%, in May 70%, and in June 60%. After September the quarterly rate will apply.

This announcement would indicate that the Transport Ministry has no intention of abandoning car and motor cycle taxes in favour of a petrol tax—which is still urged as the most fair and equitable system, since the tax payable is proportional to the use made of the roads. But we may

repeat the remark in our last issue that, if the return shows a £2,000,000 surplus over estimate, is it not time that a reduction of taxes was made, and so assist the expansion of the movement and thereby brighten trade to the extent that thousands of unemployed may be absorbed by the various factories all over the country?

The Status of the Three-wheeler.

APART from its present score in the matter of taxation, the three-wheeler has in the past served a useful purpose as a link between the motor cycle—the cheapest form of travel—and the rather more expensive light car. At the moment prices are in a state of flux, but will have settled down to a more stable basis by the time that the Motor Cycle Show at Olympia opens its doors. We shall then be able to see whether the three-wheeler is to retain its former status or whether it is to develop on more ambitious lines. Long ago the forecar was the favoured form of three-wheeler, but in course of time it developed from the simplest form of passenger motor cycle into a fully equipped car on three wheels (termed a tricar) selling at a comparatively high price. As a result it disappeared, and gave place to the simple three-wheeler which has justly enjoyed a very considerable vogue. At the moment the three-wheeler shows signs of following in the footsteps of its prototype—the forecar—and passing from the stage of a link between the motor cycle and light car to a very highly-developed and equipped three-wheeled car. As a consequence the general run of prices has risen until they are above those of the cheaper four-wheelers and equivalent to those of some moderate-priced light cars which offer the same equipment. It would appear, therefore, that the three-wheeler is tending to over-development—a state of affairs much to be regretted, since in its lighter and less elaborate forms the three-wheeled runabout is a machine of strong appeal and high performance.

A Relic.

TIDYING up my garage the other day (one *has* to, when the Wood-Milne tyre pump gets lost on the bench), I came across an eloquent relic of bygone days. It consisted of a small leather case about 6 x 4 in. containing half a dozen handy tools. I was its original inventor. I pointed out to the trade about fifteen years ago that a motor cycle stopped every few miles, and that it was a great nuisance having to unlash the main toolkit; why not carry knife, screwdriver, belt punch, and a few other handy oddments in one's side pocket? The trade responded nobly, and somebody—Reg. Samson, I fancy—went one better by designing a special motor cyclist's belt with sewn holsters for containing the necessary kit.

Nowadays one goes from Coventry to Edinburgh, round the Scottish Six Days, and back home again, without opening the tool kit.

The Experimental Engine.

JONES designed it. All the crack power units of the day were going to be back numbers. At last it was ready for demonstration to a few trusted friends. We gathered round. The new engine was mounted in a four-wheeled chassis—unkind critics have remarked before now that a four-wheeled chassis makes an admirable roadside bench in emergencies. Jones started it up, and dismounted to commence his potted lecture on the merits of the engine. The revolutions varied from 200 to 2,000 per minute on a constant throttle opening. Yes. You have guessed right. It was a multi-cylinder two-stroke.

Jones is now redesigning its induction system

From a Reader.

66 **D**EAR Ixion,—
“As you seem to be taking an intelligent interest in stands just now, why don't you clamour for a gadget which sidecar men have always wanted. You must have noticed that when you are detaching your sidecar from your motor cycle, it generally jams for about a quarter of an hour. Then you get ratty, clump it with a coal hammer, and it tumbles off, scarring its glossy coachwork, abrading your shins, and generally playing the goat. Why doesn't somebody evolve a neat hinged prop which would enable the sidecar to remain gracefully poised on its own wheel and the suggested leg when the decrenisi becomes absolute? The sidecar could then remain on its leg until remarriage became due.”

There may be something in the suggestion. Anyhow, I am willing to testify that there is nothing so unhandy as a divorced sidecar, unless it be a machine gun tripod.

The Super Saddle.

THOUGH spring frames gain very little ground, the “comfort movement” progresses apace, and our spring frame campaign of the last few years has fathered two comfort gadgets which nobody foresaw when the whole trade first commenced its experiments. The first is the oversize tyre, which may ultimately become the standard size tyre. The second is the super saddle. Of the two alternatives to a spring frame, I should give my vote for the oversize tyre if one was limited to either dodge exclusively; for it is undeniable that when rear wheel shocks are intercepted by a big, flabby tyre or a scaffolding of springs under the saddle, the front fork promptly confesses to crimes of which it was previously unsuspected. The oversize tyre goes far to soften the acerbity of an imperfect fork.

But, of course, the trouble about the big tyre is that you cannot put it on to every machine. If the rims will accept a walloping tyre, it by no means follows that the mudguards, brake work, and other obstacles will clear. Given a good fork, a pair of big tyres, and a super saddle, nobody need clamour for additional comfort. On the other hand, it is probable that a really well-designed spring frame would afford similar comfort at a lower weight, and usually at reduced cost.

Why not Overtyre?

SEVERAL kind friends have written to point out that the real cure for the puncture nuisance is to overtire. I quite agree. My winter mount has electric lighting, legshields, and 3 in. tyres, all of which I regard as essential elements in a November-to-March mount. Several credible witnesses assert that a pair of 3 in. tyres will run two whole seasons on an average 500 c.c. machine without puncturing. The last pair of 3 in. tyres which I mounted on a 3½ h.p. ran 5,000 odd miles before I sold it, and were never re-inflated, whilst their ribbed tread showed no signs of abrasion. Oversize tyres may therefore be regarded from three standpoints. First, they are a genuine cash economy. Second, they compete with spring frames for comfort. Third, they go far towards eliminating tyre stops.

Direct Steering.

I HAVE received most woebegone letters during the last few months from readers who have purchased direct-steering cycle cars after previous experience with geared-steering cars, and who consider the simpler method totally unsafe. This idea is a pure illusion. Direct steering is as accurate and safe as any other type, for all practical purposes. I have covered many, many thousands of miles with it.

Occasional Comments.—

and quite admit that the change from one form of steering to another is trying at the outset, and even apt to alarm the timid. But the contrast is not insuperable, and a very few days' practice will put a driver quite at his ease with the simpler type. He should conduct his early experiments in a roomy place where traffic is light, keep a firm grip on the wheel, and take his corners cautiously.

Would You Believe It?

ON opening one of my letters yesterday, thick blue fumes poured out of the envelope as soon as it was slit. The fumes emanated from the sulphurous comments a reader had annexed to a letter received from somebody who had advertised that he wanted to buy a certain make of motor cycle. The advertiser's reply ran:

"I thank you for offer of your motor cycle, but I have decided that *my horse* will be the best for me through the winter."

A Sidcot Suit.

A CORRESPONDENT wants to know what a Sidcot suit is. It is like a revolver—a handy thing on special occasions, but you do not want it every day. Actually it is what the tailors call an "aviation suit," and is designed to achieve the impossible, *i.e.*, keep you warm in December at altitudes of 25,000ft. and speeds of 100 m.p.h. It is externally constructed of waterproofed twill, lined with fleece and other cosy materials, and makes you look like a hybrid. It follows that a Sidcot suit is just the goods for a London-Exeter or for any other motor cycle expedition on which warmth is of far more account than appearance; but it is not, of course, quite the dress in which you would go to declare your income and past moral character to Mabel's papa. The dis-

posal merchants have not sold them all yet, and the ardent motor cyclist can still pick one up at much under the original price which the R.A.F. paid for them. It is odd how war relics come in handy. When I test an 8 h.p. sidecar at night this winter I shall be clad in a helmet and Sidcot suit—both made for the R.A.F.—gum boots designed for the much-enduring infantry, Triplex goggles (M.T. pattern), and a pair of mitts originally ordered for the Archangel field force.

Why not Velocipede?

A CORRESPONDENT who enjoyed a classical education suggests that if cyclists dislike the term "pushbike" they should adopt the one and only word in our language which properly belongs to them, to wit, "velocipede," by which name all pedal cycles were known in his father's young days. I think he is not on the surest ground. It is, of course, ridiculous for cyclists to claim the plain word "bicycle," which means "two-wheeler," and contains no implications about the source of power used for propulsion. But "velocipede" only means "swift foot," and says nothing about wheels of any kind. I fear my verdict must still be cast in favour of "pushbike."

Thanks to the Drought?

I MUST never say another word against belts. Has anybody ever run a brand new belt for seven months without touching it? My baby two-stroke took the road on March 23rd last with a new $\frac{3}{4}$ in. Dunlop belt, which is still running without attention. I cannot give the mileage, as I cannot afford to adorn a potterbus with six-guinea accessories, but the little 'bus goes out nearly every day, and thinks nothing of a sixty-mile spin. The belt, of course, figures in a combined drive, and is not direct.

THE DORSET ARMS, NEAR TONBRIDGE.

Many a motor cyclist would pass by this inn thinking that it was a private house but for the quaint sign, which at once catches the eye. For the rider who carries a camera it is worth while stopping at, as the building is over four hundred years old.

Road Tests of New Models

MUCH may be said in favour of the twin-cylinder two-stroke engine for motor cycles. Having the torque of a "four," and yet, withal, very simple, it is not surprising that much interest has been aroused by the advent of the only V twin two-stroke on the market, the 5 h.p. Stanger. (This machine was briefly described in *The Motor Cycle* of June 9th, 1921.) It has now reached a more advanced stage in production.

We were particularly impressed by the excellent workmanship noticeable in all the internal parts of the engine. The cylinders, which are interchangeable, are of the three-port pattern, are highly finished as regards their interior, and have neatly cast radiating fins. The cylinders are offset, but, notwithstanding this fact, the crank journals are only 1½ in. apart. The crank case is in two separate compartments, each being compression tight, and a special washer abutting against each ball bearing on each external side is rendered compression tight by an oil seal. The centre bush is in two halves, and there is a greaser underneath the crank case so that grease can be forced on to the crankshaft through four holes cut in the bush referred to. The crankshaft runs on double rows of Skefko ball bearings. The connecting rods possess roller bearings, the rollers being introduced through a slot in the crank, thus enabling the connecting rod to stay in position and each

The crank case of the Stanger V-twin two-stroke engine.

THE 5 H.P. V TWIN TWO-STROKE STANGER.

SPECIFICATION.

ENGINE: Stanger, 70 x 70 mm. (538 c.c.), V twin two-stroke.

LUBRICATION: Petroil.

MAGNETO: E.I.C.

CARBURETTER: Senspray.

GEAR BOX: Sturmey-Archer three-speed.

TRANSMISSION: Chain-cum-belt.

WHEELS: 26 x 2½ in.

FORKS: Brampton.

FRAME: Stanger sprung.

WEIGHT: 230 lb.

PRICE: £112 10s. **MAKERS:** The Stanger Engine Co., 13, Steele Road, Tottenham, London, N.17.

roller to be fitted in place singly. Two "keeps," made out of one piece, then separated and secured by split pins, serve to hold the rollers in place.

The pistons are more or less of standard design, but are beautifully finished, and carry two pinned rings at the top and one at the bottom. The method of securing the gudgeon pin is worthy of mention. This is held by two headless split pins, which repose in a groove cut in the piston; they are retained in place by being expanded in the centre. Considerable thought has been exercised in the design of the inlet pipes, which are so arranged that they distribute the mixture equally to the two cylinders. Although the cylinders are set at 45°, a 180° magneto is fitted, giving equal firing intervals, the crank angle being 135°. The exhaust box is of excellent construction, consisting of two large expansion chambers terminating in a final exit pipe.

The frame is symmetrical in design, and has the rear portion sprung, there being a multi-leaf spring anchored in a box immediately under the saddle. There are two bell cranks working on hardened steel pins at the rear of the chain stay and a stirrup connecting these to the lower parts of the spring. All moving parts are supplied with grease cups of sensible dimensions.

View of the engine showing inlet and exhaust arrangements

Road Tests of New Models—

The other week-end one of these machines was placed at our disposal by the Stanger Engine Co. The Tottenham High Road is not an ideal place to attempt experience with a new mount, but the surface, though execrable, was dry, and we first of all noticed the comfortable way in which the machine throttled down while negotiating the heavy traffic, which lasted for several miles. It is a noteworthy feature of the Stanger that, while we would not like to say that four-stroking at low speeds is entirely absent, it is much less marked than on other two-strokes we have tried, and would probably be a good deal less if a modern single-lever carburetter were fitted. The machine is particularly sensitive to spark advance, and it is absolutely essential to keep the lever retarded when starting; and it is also advisable to retard on a hill. The first hill of any consequence came after leaving Enfield Town, and was climbed in excellent style, notwithstanding the fact that there were several checks caused by traffic, and at no time was it impossible to regain 30 m.p.h. on the gradient on top gear. Power and acceleration were admirable. We also found that the machine steered well, and there is no doubt that the spring frame added largely towards comfort over rough roads.

Capable Hill-climbing.

Our destination was reached that evening with no further trouble than a nipped tube, which necessitated the final stage being covered in the dark. The London side of Ridge Hill was taken with the greatest ease and on about half throttle, and the remainder of the

The Stanger twin-cylinder two-stroke, fitted with spring frame. The cylinders are 70 x 70 mm. (538 c.c.), and are set at 45°.

journey was finished without incident in a curious half-light, which rendered the lamp of very little use. The following day an excursion was made into the country to test the hill-climbing powers of the machine, and it was taken to a gradient near Dunstable known as Chaul End, a little hill hidden away in the Chilterns with a gradient of about 1 in 5. During this trip

An efficient but neat silencer is fitted.

about 20 m.p.h. The new Stanger is most comfortable, and impressed us very favourably from every point. It appeared, however, to be slightly under geared, but, notwithstanding, it attained a speed of 40 m.p.h. on the level without any attempt at letting it "all out."

Perhaps the machine's most attractive feature is the delightfully even torque of the engine; it is scarcely possible to distinguish the separate explosions at speeds above 20 m.p.h. This fact, too, combined with a comfortable riding position, makes it very stable on greasy roads or wet city streets.

Slow Running on Top Gear.

At the end of the trial it was driven back to Tottenham, and on reaching Enfield an extremely dense fog was encountered. This necessitated driving at times on second speed below 10 m.p.h. and on top speed from 15 to 12 m.p.h., and, unpleasant though it was, it served to show what the Stanger would do at slow speeds. As before mentioned, although it would not be right to say that four-stroking was entirely absent, it was certainly far less noticeable than in any two-stroke we have yet tried, and the slow running in top gear was by no means uncomfortable.

Looking back over the week-end, we find that there are very few points, if any, in which the Stanger can

be criticised. It is unconventional but by no means freakish, and a machine which, in our opinion, deserves to be more widely known and to enjoy increasing popularity. The Stanger two-stroke has appeared several times in reliability trials during the past season, and on each occasion has acquitted itself remarkably well.

VALVE PORT PROPORTIONS.

A Technical Discussion of the Relations between Valve Sizes and Gas Velocities.

ALTHOUGH it is common knowledge that the valves of an internal combustion engine need have as large a port opening as possible, there is another matter that is not so well understood, this being the ratio of the inlet port dimensions to those of the exhaust port.

In a well designed modern engine the ports are made as large as the design will allow. Although the reason for this policy is well-known, a brief explanation of the effect of valve port size upon engine efficiency will allow what follows to be more easily understood.

Advantages of Large Valve Ports.

Dealing first with the inlet port—supposing the engine to be running very slowly, there is plenty of time for the gas to flow through the induction pipe into the cylinder which can receive the maximum charge of gas. When the engine is running quickly there is less time for the cylinder to fill, and the gas has to travel more rapidly in the induction system in order properly to fill the cylinder. Unfortunately, the speed of the gas does not increase in proportion to the increase of piston speed, on account of the resistance of the pipes, valve port, etc., which restrict the passage of the gas. Thus, in the case of the inlet valve, large port dimensions offer less resistance to the passage of the gas and a fuller charge is obtained.

In the case of the exhaust the effects of size are similar, but here any resistance to the passage of the gas leads to back pressure upon the piston during the exhaust stroke.

From this it will be seen that increase of the inlet port dimensions results in a better charge being obtained in the cylinder, while increase of the exhaust port dimensions leads to reduction of back pressure by allowing the exhaust gases to escape more easily.

Relation Between Induction and Exhaust.

A little consideration will make it clear that there is a kind of relation between the losses caused by resistances at the inlet and at the exhaust ports and passages; for example, the effects of resistance either at the inlet or exhaust may be measured in terms of horse-power, and for a given loss in power due to restricted inlet, an equal loss in power could be obtained by a suitable restriction of the exhaust. Now

it will be obvious that an equal increase or reduction of both valve dimensions would not necessarily cause an equal increase or reduction of efficiency.

Supposing the valve port areas, both inlet and exhaust, of a given engine, to be increased by equal amounts, it may happen that at a high speed the increase of power due to the increase of inlet area may be about, say, 1 h.p., while that due to the increased exhaust area may be only about $\frac{1}{2}$ h.p.; in a case of different engine design, size, running speed, or of a different amount of port area increase, the results may be totally different—in fact, the effects of modifying the valve areas depend much upon design factors.

The foregoing has shown that the gain of power due to high volumetric efficiency and reduced back-pressure depends not only upon the size and lift of the valves, but also upon the size of the inlet in relation to the exhaust.

Fig. 1:

How Maximum Efficiency is Obtainable.

In view of the necessity of making the valves as large as possible, they are usually allowed to take up all the available space in order to give each port as large an area as possible. This means that the space is divided up between the inlet and the exhaust ports, and, therefore, any increase in the area of one means a decrease in that of the other. From this it will be clear that reducing the area of one port allows a corresponding increase of that of the other, and the decrease

in power due to the reduction of one port may not be so great as the increase in power due to the increase in area of the other port.

It is impossible to eliminate all volume losses due to inlet restriction at high speeds, and it is equally impossible entirely to eliminate all back-pressure losses. The best way to deal with the situation is to eliminate the larger losses as much as possible.

Now, if for every unit of area taken from one port, an equal unit of area may be added to the other, it is possible in most cases for the one valve port to be made larger than the other, with beneficial results, the larger area being allotted to the valve port which will show the greatest reduction in resistance, measured in terms of horse-power.

To take an example: supposing a reduction of $\frac{1}{2}$ a square inch in the exhaust valve area causes a loss

Valve Port Proportions.—

of, say, $\frac{1}{4}$ h.p.—if the corresponding increase of inlet area only causes an increase of $\frac{1}{8}$ h.p., the proportions will be wrong, because they will result in a total loss of $\frac{1}{8}$ h.p. If, however, the gain of power due to the increased inlet area equalled $\frac{3}{4}$ h.p., it will be obvious that, after deducting the increased $\frac{1}{4}$ h.p.

Fig. 2

loss at the exhaust, there would still be about $\frac{1}{2}$ h.p. to the good.

This principle may be still further explained by reference to fig. 1, which helps to show how the losses increase as the valve areas are decreased.

How the Losses Vary.

The graph, which is merely explanatory, is drawn to represent curves of horse-power losses due to exhaust back-pressure and imperfect charging, the curves indicating the manner in which the losses are reduced or increased by varying the valve areas.

According to the figure, the exhaust losses are much less than the inlet losses for the valve areas from 1 to 4 square inches. It is evident, therefore, that any smaller area, such as 1 square inch, would have a greater effect upon the inlet losses than upon the exhaust. This may be proved by making a few investigations in regard to various sizes of valve ports, by the use of the graph.

It has already been mentioned that the losses under discussion mount up at a rapidly increasing rate as the engine speed is increased. This has the effect of complicating the matter of valve port sizes still further, because the losses, in changing their value with variations of speed, do not both change their value at the same rate, so that the relation between inlet and exhaust is changed whenever the speed is varied to any extent.

Fig. 2 shows an actual graph of volumetric efficiency taken from an engine after being properly warmed up by running. It will be seen that the amount

of charge, and, therefore, the drop below maximum volumetric efficiency, falls rapidly as the speed is increased. Now this loss of volume means a loss of a certain amount of horse-power.

This loss of power due to imperfect induction at high speeds is accompanied by a loss of power due to increased back-pressure at the exhaust, this loss also increasing with increase of speed, as indicated in fig. 3, which shows an actual curve of mean pressure at the exhaust of an engine.

There are several points about figs. 2 and 3 which may be explained here. It will be noted that both the induction and exhaust losses increase at a varying rate as the speed increases, and, therefore, the relations between the inlet and exhaust losses are continually varying. Now it has already been explained that to get maximum results at high speed the valve areas should have a certain relation to each other. Of course, the valve areas are fixed, and, therefore, suit only one set of relations between the exhaust and inlet losses, and as the relations change with variations of speed the valve proportions become less suitable.

How Compromise may be Obtained.

The greatest effect of good valve design is always found at high engine speeds, and the benefits of a correct ratio between the respective areas of inlet and exhaust ports are likewise found more at high speed, so that it is essential to design the valves and ports to suit the speeds at which it is intended that the engine should normally run.

Fig. 3.

Of course, large numbers of engines have the ports all the same size, but this is usually to cheapen production by avoiding the use of two different patterns of valve. When there is plenty of reserve power, or when a suitable range of gear ratios is available, this is not so important a matter, but for cases where the engine is desired to give its utmost power at high engine speeds, the careful designing of the valves is of first importance.

H. GEORGE HARLEY.

THIS YEAR'S LONDON-EXETER-LONDON RUN.

PARTICULARS and entry forms are now ready for the seventh London-Exeter-London run, open to members of the Motor Cycling Club. It will be held on Monday and Tuesday, December 26th and 27th. The following is a brief *résumé* of the regulations. The start will be from the Bridge House Hotel, Staines, on Monday evening, December 26th, at eight o'clock.

The route will be Staines, Bagshot, Basingstoke, Salisbury, Shaftesbury, Yeovil, Chard, Honiton, Sidmouth, Peak Hill, Exeter. The return journey will be Trow Hill, Lyme Regis, Bridport, Dorchester, Blandford, and Salisbury.

Gold medals will be awarded to competitors who are not more than fifteen minutes early nor more than ten minutes

late at any point on the journey, and who make non-stop ascents of Chard and Trow hills. Silver medals will be awarded to competitors who are not more than fifteen minutes early at any point, and who complete the journey in twenty-one and a quarter hours. Entries cost £2.

Intending competitors who are not members of the M.C.C. must apply to the secretary, Mr. Southcomb May, 34, Gower Place, London, W.C.1, for an application form, which must be completed and returned to him, together with membership fees, not later than Monday, November 21st. Particulars regarding the trial can be obtained from the trials hon. secretary, Mr. F. T. Bidlake, 85, North End Road, Golders Green, London, N.W.1. Entries close on Dec. 7th.

CYCLE CARS under TEST

A Small
Four-wheeler
on
Motor Cycle
Lines.

The
8 H.P. A.V.

A
Monocar
with
Dickey
Seat.

SPECIFICATION.

ENGINE: 8 h.p. J.A.P., 85.5 × 85 mm. (986 c.c.)

GEAR BOX: Two-speed epicyclic, on engine shaft.

TYRES: 26 × 2½ in.

BRAKES: V drums, with Ferodo shoes.

WEIGHT: 540 lb.

TRACK: 30 in.

WHEELBASE: 7 ft.

TRANSMISSION: One chain to back axle.

LUBRICATION: Drip feed.

CARBURETTER: Claudel automatic.

THE "narrow track" type of cycle car originated with the Bedelia in France, and is represented in this country by the Tamplin and the A.V. monocar. Motor cyclists as a class are prone to imagine that such vehicles are inherently unstable except upon the best roads; it is fancied that a broad track alone allows a machine to sit the road comfortably. The suspicion may be true in some cases, but I was surprised and delighted to find during a week's trial that the A.V. is perfectly steady even upon bad roads. I drove it at all sorts of speeds over all kinds of surface, and it holds the road far better than the average motor bicycle. Provided reasonable caution is observed on corners, it is absolutely safe, and it further affords a surprising degree of comfort. Its road-holding and suspension put it as high up in the cycle car class as the famous Bugatti stands in the small car sphere.

The machine which I have been driving has done 3,000 miles, and is a monocar with a dickey on the top of the body

behind the driver, the passenger's feet resting on the near side running board. No reverse is fitted, and the two-speed gear is of the epicyclic type with Ford control, viz., a single pedal with three positions—right down, low gear; half-way up, neutral; and right up, top gear. This gear did not appeal to me in the least. The absence of a reverse is tiresome in lane and town work; the gear appears to embody a great deal of friction on the low ratio; the gap between the ratios is so wide that the engine generally knocks badly when picking up after a change to top, a knock accentuated in my case by one slack-fitting piston, and very heavy foot pressure is required to

keep low gear engaged on full throttle up a steep hill. The friction of the gear is probably responsible for the rather heavy fuel consumption.

The machine is a monocar to its marrow, and the dickey must be regarded as purely casual accommodation, like the folding seats in a big car. Its occupant is practically devoid of protec-

The engine is quite easily started by means of a chain in the manner shown. Considerable leverage may be obtained by this method.

Cycle Cars under Test—

tion from the weather, perched up like a parrot on a stand above the tiny aeroplane windscreen. No hood is provided, and the second seat is only fit for a short-distance passenger in fine, warm weather. An alternative pattern of car is made in which two staggered seats accommodate two people in real comfort, and the "duocar" model should always be ordered where two is the usual load. I understand that a family model is in preparation for next year, accommodating two adults and two children inside the body.

Engine starting is perfectly easy, being performed by a handle, chain and sprocket at the rear of the machine. With the engine warm, one pull always suffices; a doping and one pull always succeed with everything cold. There are two petty drawbacks which one must put up with on a four-wheeler sold at the price of a motor bicycle—the hand-grip is in a very exposed position, and gets very dirty, whilst one must dismount to restart the engine in the event of an accidental stop.

The engine is either a 6 h.p. or 8 h.p. J.A.P. V twin, and runs very sweetly at low and moderate throttle openings on the high gear. On low gear and in free engine there is necessarily a good deal of vibration. It is doubtful whether an engine carried at the tail of the machine keeps quite so cool as is practicable in the Morgan or Tamplin positions; with a passenger occupying the dickey, the power unit is probably rather too much screened from cooling draughts. But all the knocking which I was able to provoke was ascribable to the loose fit of one piston, or to the wide gap between the gear ratios.

Lubrication and Controllability.

Lubrication is by drip from a conveniently situated sight feed. This simple method is probably the best available for cycle car work, as the oiling can be nicely adapted to the work in hand. Care must be taken to shut the tap when the machine is stopped, as the feed is by gravity, and the entire contents of the tank can drain into the engine if the tap is left open.

Braking presents no anxiety, as the low gear—as on the Ford car—always acts as a powerful reserve to the two useful brakes.

The controls comprise switch, throttle, spark lever (all mounted on the body); side brake lever (inside body on left); brake pedal (left); gear and clutch pedal (Ford type on the right); gear lever (outside body on the right, employed solely to lock the gear positively in neutral when the car is at rest). On the road the machine is absurdly simple to drive, being controlled exclusively by the right hand and foot. One finger is kept on the throttle lever of the automatic Claudel-Hobson carburetter, whilst the right foot controls the gear pedal, which will serve as a brake in all ordinary circumstances. It is perhaps rather a pity that the clutch and brake pedal positions do not correspond with car practice.

Hill-climbing is excellent. The machine's compass on the top gear roughly covers all gradients which a £500 small car can climb on its top and middle gears. Low gear is very seldom requisitioned, and will apparently take two people anywhere.

The speed is comparable to that of a 500 c.c. motor bicycle. No speedometer was fitted, but 45 m.p.h. is easily attained in a very short distance on the flat, and on a slightly falling road the little car maintained just under 55 m.p.h. for a full mile. Petrol consumption worked out at 41 m.p.g. over sharply undulating roads, and the oil feed was at the rate of 900 m.p.g., which is a shade more than a sidecar outfit of similar c.c. would require.

Tyre Accessibility.

The wheels are non-detachable, but it is naturally a very easy job to insert a new tube, while to change a cover is not much more difficult.

To sum up, the substitution of a gear box for the present epicyclic two-speed will convert the A.V. into an extraordinarily attractive little monocar. I cannot understand why a good fleet of these very capable machines has not been entered in any Six Days Trial. They are exactly what a number of riders are looking for, as they are safer on grease than a two-wheeler, provide more comfort than the average motor bicycle, and offer good weather protection. I have the pleasantest memories of my week's trial, and look forward to sampling the later models.

BENEDICT.

The 8 h.p. A.V. monocar used for the road test. The sporting yet graceful body design is an attractive feature of the little car.

A 67 FEET JUMP FOR THE FILMS.

GUS MARTIN, a well-known Los Angeles motor cyclist, recently made a blood-curdling leap of 67 feet in mid-air for a firm of film producers.

The scenario called for the rider to dash down a steep hill, about 300 feet long, shoot up a short incline with a 10 foot rise, and leap a gulch 37 feet wide and 30 feet deep.

Dashing down the hill wide open in second gear at forty-five miles an hour, the rider gracefully sailed high in air as he reached the end of the up-grade take-off, and cleared the chasm under him by a big margin, sitting his

machine steadily and easily in a semi-upright position. As the machine lost momentum in the air, it started downward in a nose-dive, and crashed to the ground, front end first, and then lunged forward in gigantic somersaults. The plucky rider rapidly recovered from the shock, and so far has suffered no ill-effects from his leap.

Measurements taken showed that Martin had made a leap of 67 feet from the take-off to the point where the machine first landed, and that it had travelled a total distance of 97 feet before it came to a stop.

THREE PROBLEMS.

Knotty Questions on Mysterious Troubles and Noises.

OCCASIONALLY our "Queries" Editor has problems submitted which, on the data supplied, are apparently insoluble.

It is in the hope that some of our readers with long experiences of the makes mentioned may be able to suggest a cure that we print the following posers.

Unaccountable Valve Trouble.

A puzzling valve defect is "Mechanic's" trouble. He writes as follows:

"I have considerable trouble with the valves (especially the exhaust) of my $4\frac{1}{2}$ h.p. flat twin Humber. They do not always seat properly. When I take them out, there are plenty of signs of blowing past the seatings.

"The valves are dead true, and a perfect fit in their seatings and sleeves, and the tappets are properly adjusted. The strange thing is that the machine will go perfectly for half a mile, then commence misfiring, then go right again, and so on.

"I may add that new valve springs and pockets have just been fitted, but still the blowing back continues."

Changes in an Exhaust Note.

"Mechanovice" (Watlington) has experienced a very curious phenomenon. He writes:

"My lightweight has a $2\frac{3}{4}$ h.p. Union two-stroke engine. After about five miles' steady running the exhaust takes on an altogether different note, a low, musical throb, in contrast to its previously resonant 'crackle.' The change takes place quite suddenly, and continues for the rest of the journey; but this is what puzzles me most, the changed exhaust note is accompanied by a noticeable increase of power. I am quite certain of this, and have proved it to my own satisfaction on several occasions by the change taking place at the foot of a slight hill, when, without altering the position of the controls in any way, the speed will remain just as high as on the level, the machine accelerating quite remarkably on reaching the top. If the engine is allowed to cool down, the exhaust note regains its former character, and does not alter till at least five miles have been covered—occasionally seven or eight. I can quite understand that there is some change in the

working conditions of the engine, which does not take place until everything is thoroughly warmed up. Exactly what it is I should be most interested to learn. Incidentally, I am troubled with a great deal of four-stroking. I have tried two carburettors and many different jets, but with no improvement. The engine has just been taken down and appears perfect in every way."

Locating an Objectionable Noise.

"Chainman" (Gloucester) is also in difficulties regarding noise, but in this case it is of the unwanted variety:
